

Hospital Equity Measures Report

General Information

Report Type:	Hospital Equity Measures Report
Year:	2024
Hospital Name:	PROVIDENCE LITTLE COMPANY OF MARY MC - SAN PEDRO
Facility Type:	General Acute Care Hospital
Hospital HCAI ID:	106190680
Report Period:	1/1/2024 - 12/31/2024
Status:	Complete
Due Date:	11/29/2025
Last Updated:	01/19/2026
Hospital Location with Clean Water and Air:	N
Hospital Web Address for Equity Report:	providence.org/locations/socal/plcm-san-pedro

Overview

Assembly Bill No. 1204 requires the Department of Health Care Access and Information (HCAI) to develop and administer a Hospital Equity Measures Reporting Program to collect and post summaries of key hospital performance and patient outcome data regarding sociodemographic information, including but not limited to age, sex, race/ethnicity, payor type, language, disability status, and sexual orientation and gender identity.

Hospitals (general acute, children's, and acute psychiatric) and hospital systems are required to annually submit their reports to HCAI. These reports contain summaries of each measure, the top 10 disparities, and the equity plans to address the identified disparities. HCAI is required to maintain a link on the HCAI website that provides access to the content of hospital equity measures reports and equity plans to the public. All submitted hospitals are required to post their reports on their websites, as well.

Laws and Regulations

For more information on Assembly Bill No. 1204, please visit the following link by copying and pasting the URL into your web browser:
https://leginfo.legislature.ca.gov/faces/billTextClient.xhtml?bill_id=202120220AB1204

Hospital Equity Measures

Joint Commission Accreditation

General acute care hospitals are required to report three structural measures based on the Commission Accreditation's Health Care Disparities Reduction and Patient-Centered Communication Accreditation Standards. For more information on these measures, please visit the following link by copying and pasting the URL into your web browser:

The first two structural measures are scored as "yes" or "no"; the third structural measure comprises the percentages of patients by five categories of preferred languages spoken, in addition to one other/unknown language category.

Designate an individual to lead hospital health equity activities (Y = Yes, N = No).

Y

Provide documentation of policy prohibiting discrimination (Y = Yes, N = No).

Y

Number of patients that were asked their preferred language, five defined categories and one other/unknown languages category.

246758

Table 1. Summary of preferred languages reported by patients.

Languages	Number of patients who report preferring language	Total number of patients	Percentage of total patients who report preferring language (%)
English Language	207264	246758	84
Spanish Language	33387	246758	13.5
Asian Pacific Islander Languages	3182	246758	1.3
Middle Eastern Languages	639	246758	0.3
American Sign Language	37	246758	0
Other Languages	2249	246758	0.9

Centers for Medicare & Medicaid Services (CMS) Hospital Commitment to Health Equity Structural (HCHE) Measure

There are five domains that make up the CMS Hospital Commitment to HCHE measures. Each domain is scored as "yes" or "no." In order to score "yes," a general acute care hospital is required to confirm all the domain's attestations. Lack of one or more of the attestations results in a score of "no." For more information on the CMS Hospital Commitment to HCHE measures, please visit the following link by copying and pasting the URL into your web browser:

<https://data.cms.gov/provider-data/topics/hospitals/health-equity>

Centers for Medicare & Medicaid Services (CMS) Hospital Commitment to Health Equity Structural (HCHE) Measure Domain 1: Strategic Planning (Yes/No)

- Our hospital strategic plan identifies priority populations who currently experience health disparities.
- Our hospital strategic plan identifies healthcare equity goals and discrete action steps to achieve these goals.
- Our hospital strategic plan outlines specific resources that have been dedicated to achieving our equity goals.
- Our hospital strategic plan describes our approach for engaging key stakeholders, such as community-based organizations.

Y

CMS HCHE Measure Domain 2: Data Collection (Yes/No)

- Our hospital strategic plan identifies healthcare equity goals and discrete action steps to achieve these goals.
- Our hospital has training for staff in culturally sensitive collection of demographics and/or social determinant of health information.
- Our hospital inputs demographic and/or social determinant of health information collected from patients into structured, interoperable data elements using a certified electronic health record (EHR) technology.

Y

CMS HCHE Measure Domain 3: Data Analysis (Yes/No)

- Our hospital stratifies key performance indicators by demographic and/or social determinants of health variables to identify equity gaps and includes this information in hospital performance dashboards.

Y

CMS HCHE Measure Domain 4: Quality Improvement (Yes/No)

- Our hospital participates in local, regional or national quality improvement activities focused on reducing health disparities.

Y

CMS HCHE Measure Domain 5: Leadership Engagement (Yes/No)

- Our hospital senior leadership, including chief executives and the entire hospital board of trustees, annually reviews our strategic plan for achieving health equity.
- Our hospital senior leadership, including chief executives and the entire hospital board of trustees, annually review key performance indicators stratified by demographic and/or social factors.

Y

Centers for Medicare & Medicaid Services (CMS) Social Drivers of Health (SDOH)

General acute care hospitals are required to report on rates of screenings and intervention rates among patients above 18 years old for five health related social needs (HRSN), which are food insecurity, housing instability, transportation problems, utility difficulties, and interpersonal safety. These rates are reported separately as being screened as positive for any of the five HRSNs, positive for each individual HRSN, and the intervention rate for each positively screened HRSN. For more information on the CMS SDOH, please visit the following link by copying and pasting the URL into your web browser:

<https://www.cms.gov/priorities/innovation/key-concepts/social-drivers-health-and-health-related-social-needs>

Number of patients admitted to an inpatient hospital stay who are 18 years or older on the date of admission and are screened for all of the five HRSN

3597

Total number of patients who are admitted to a hospital inpatient stay and who are 18 years or older on the date of admission

3686

Rate of patients admitted for an inpatient hospital stay who are 18 years or older on the date of admission, were screened for an HRSN, and who screened positive for one or more of the HRSNs

97.6

Table 2. Positive screening rates and intervention rates for the five Health Related Social Needs of the Centers of Medicare & Medicaid Services (CMS) Social Drivers of Health (SDOH).

Social Driver of Health	Number of positive screenings	Rate of positive screenings (%)	Number of positive screenings who received intervention	Rate of positive screenings who received intervention (%)
Food Insecurity	273	7.6	34	0.9
Housing Instability	590	16.4	51	1.4
Transportation Problems	166	4.6	22	0.6
Utility Difficulties	180	5	23	0.6
Interpersonal Safety	59	1.6	6	0.2

Core Quality Measures for General Acute Care Hospitals

There are two quality measures from the Hospital Consumer Assessment of Healthcare Providers and Systems (HCAHPS) survey. For more information on the HCAHPS survey, please visit the following link by copying and pasting the URL into your web browser:

<https://hcahpsonline.org/en/survey-instruments/>

Patient Recommends Hospital

The first HCAHPS quality measure is the percentage of patients who would recommend the hospital to friends and family. For this measure, general acute care hospitals provide the percentage of patient respondents who responded "probably yes" or "definitely yes" to whether they would recommend the hospital, the percentage of the people who responded to the survey (i.e., the response rate), and the inputs for the percentages. The percentages and inputs are stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding HCAHPS question number is 19.

Number of respondents who replied "probably yes" or "definitely yes" to HCAHPS Question 19, "Would you recommend this hospital to your friends and family?"

326

Total number of respondents to HCAHPS Question 19

349

Percentage of total respondents who responded "probably yes" or "definitely yes" to HCAHPS Question 19

93.4

Total number of people surveyed on HCAHPS Question 19

351

Response rate, or the percentage of people who responded to HCAHPS Question 19

99.4

Table 3. Patient recommends hospital by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

Race and/or Ethnicity	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
American Indian or Alaska Native	Suppressed	Suppressed	Suppressed	Suppressed	Suppressed
Asian	15	15	100	16	93.8

Gender Identity	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Female					
Female-to-male (FTM)/ transgender male/trans man					
Male					
Male-to-female (MTF)/ transgender female/trans woman					
Non-conforming gender					
Additional gender category or other					
Not disclosed					

Patient Received Information in Writing

The second HCAHPS quality measure is the percentage of patients who reported receiving information in writing on symptoms and health problems to look out for after leaving the hospital. General acute care hospitals are required to provide the percentage of patient respondents who responded "yes" to being provided written information, the percentage of the people who responded to the survey (i.e., the response rate), and the inputs for these percentages. These percentages and inputs are stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding HCAHPS question number is 17.

Number of respondents who replied "yes" to HCAHPS Question 17, "During this hospital stay, did you get information in writing about what symptoms or health problems to look out for after you left the

hospital?"

272

Total number of respondents to HCAHPS Question 17

323

Percentage of respondents who responded "yes" to HCAHPS Question 17

84.2

Total number of people surveyed on HCAHPS Question 17

351

Response rate, or the percentage of people who responded to HCAHPS Question 17

92

Table 4. Patient reports receiving information in writing about symptoms or health problems by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

Agency for Healthcare Research and Quality (AHRQ) Indicators

General acute care hospitals are required to report on two indicators from the Agency for Healthcare Research and Quality (AHRQ). For general information about AHRQ indicators, please visit the following link by copying and pasting the URL into your web browser:

<https://qualityindicators.ahrq.gov/>

Pneumonia Mortality Rate

The Pneumonia Mortality Rate is defined as the rate of in-hospital deaths per 1,000 hospital discharges with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission for patients ages 18 years and older. General acute care hospitals report the Pneumonia Mortality Rate by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding AHRQ Inpatient Quality Indicator is 20. For more information about this indicator, please visit the following link by copying and pasting the URL into your web browser:

https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_20_Pneumonia_Mortality_Rate.pdf

Death Rate among Surgical Inpatients with Serious Treatable Complications

The Death Rate among Surgical Inpatients with Serious Treatable Complications is defined as the rate of in-hospital deaths per 1,000 surgical discharges among patients ages 18-89 years old or obstetric patients with serious treatable complications. General acute care hospitals report this measure by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding AHRQ Patient Safety Indicator is 04. For more information about this indicator, please visit the following link by copying and pasting the URL into your web browser:

California Maternal Quality Care Collaborative (CMQCC) Core Quality Measures

There are three core quality maternal measures adopted from the California Maternal Quality Care Collaborative (CMQCC).

CMQCC Nulliparous, Term, Singleton, Vertex (NTSV) Cesarean Birth Rate

The CMQCC Nulliparous, Term, Singleton, Vertex (NTSV) Cesarean Birth Rate is defined as nulliparous women with a term (at least 37 weeks gestation), singleton baby in a vertex position delivered by cesarian birth. General acute care hospitals report the NTSV Cesarean Birth Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. For more information, please visit the following link by copying and pasting the URL into your web browser:

<https://www.cmqcc.org/quality-improvement-toolkits/supporting-vaginal-birth/ntsv-cesarean-birth-measure-specifications>

CMQCC Vaginal Birth After Cesarean (VBAC) Rate

The CMQCC Vaginal Birth After Cesarean (VBAC) Rate is defined as vaginal births per 1,000 deliveries by patients with previous Cesarean deliveries. General acute care hospitals report the VBAC Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The VBAC Rate uses the specifications of AHRQ Inpatient Quality Indicator 22. For more information, please visit the following link by copying and pasting the URL into your web browser:

[https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_22_Vaginal_Birth_After_Cesarean_\(VBAC\)_Delivery_Rate_Uncomplicated.pdf](https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_22_Vaginal_Birth_After_Cesarean_(VBAC)_Delivery_Rate_Uncomplicated.pdf)

Number of vaginal delivery among cases with previous Cesarean delivery that meet the inclusion and exclusion criteria

NA

Total number of birth discharges with previous Cesarean delivery that meet the inclusion and exclusion criteria

NA

Rate of vaginal delivery per 1,000 deliveries by patients with previous Cesarean deliveries

NA

Table 8. Vaginal Birth After Cesarean (VBAC) Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

Race and/or Ethnicity	Number of vaginal deliveries with previous Cesarean delivery	Total number of birth discharges with previous Cesarean delivery	Rate of vaginal delivery per 1,000 deliveries by patients with previous Cesarean deliveries (%)

CMQCC Exclusive Breast Milk Feeding Rate

The CMQCC Exclusive Breast Milk Feeding Rate is defined as the newborns per 100 who reached at least 37 weeks of gestation (or 3000g if gestational age is missing) who received breast milk

exclusively during their stay at the hospital. Other criteria are that the newborns did not go to the neonatal intensive care unit (NICU), transfer, or die, did not reflect multiple gestation, and did not have codes for parenteral nutrition or galactosemia. General acute care hospitals report the Exclusive Breast Milk Feeding Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The CMQCC Exclusive Breast Milk Feeding Rate uses the Joint Commission National Quality Measure PC-05. For more information, please visit the following link by copying and pasting the URL into your web browser: <https://manual.jointcommission.org/releases/TJC2024B/MIF0170.html>

Number of newborn cases that were exclusively fed breast milk during their hospital stay and meet the inclusion and exclusion criteria

NA

Total number of newborn cases born in the hospital that meet the inclusion and exclusion criteria

NA

Rate of newborn cases per 100 that were exclusively fed breast milk during their hospital stay and meet the inclusion and exclusion criteria

NA

HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate

General acute care hospitals are required to report several HCAI All-Cause Unplanned 30-Day Hospital Readmission Rates, which are broadly defined as the percentage of hospital-level, unplanned, all-cause readmissions after admission for eligible conditions within 30 days of hospital discharge for patients aged 18 years and older. These rates are first stratified based on any eligible condition, mental health disorders, substance use disorders, co-occurring disorders, and no behavioral health diagnosis. Then, each condition-stratified hospital readmission rate is further stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. For more information on the HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate, please visit the following link by copying and pasting the URL into your web browser:

https://hcai.ca.gov/wp-content/uploads/2024/10/HCAI-All-Cause-Readmission-Rate-Exclusions_ADA.pdf

HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate – Any Eligible Condition

Number of inpatient hospital admissions which occurs within 30 days of the discharge date of an eligible index admission and were 18 years or older at time of admission

139

Total number of patients who were admitted to the general acute care hospital and were 18 years or older at time of admission

2036

Rate of hospital-level, unplanned, all-cause readmissions after admission for any eligible condition

within 30 days of hospital discharge for patients aged 18 and older

6.8

Table 10. HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate for any eligible condition by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

Race and/or Ethnicity	Number of inpatient readmissions	Total number of admitted patients	Readmission rate (%)
American Indian or Alaska Native	Suppressed	Suppressed	Suppressed

Health Equity Plan

All general acute care hospitals report a health equity plan that identifies the top 10 disparities and a written plan to address them.

Top 10 Disparities

Disparities for each hospital equity measure are identified by comparing the rate ratios by stratification groups. Rate ratios are calculated differently for measures with preferred low rates and those with preferred high rates. Rate ratios are calculated after applying the California Health and Human Services Agency's "Data De-Identification Guidelines (DDG)," dated September 23, 2016.

Table 15. Top 10 disparities and their rate ratio values.

Measures	Stratifications	Stratification Group	Stratification Rate	Reference Group	Reference Rate	Rate Ratio
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Race and/or Ethnicity	Asian	10.9	White	6	1.8
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate, stratified by behavioral health diagnosis (No Behavioral Health Diagnosis)	Expected Payor	Other	10.4	Medicare	6.5	1.6
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Race and/or Ethnicity	Black or African American	8.6	White	6	1.4
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate, stratified by behavioral health diagnosis (Mental Health Disorder)	Sex Assigned at Birth	Male	9.3	Female	6.9	1.3
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate, stratified by behavioral health diagnosis (No Behavioral Health Diagnosis)	Race and/or Ethnicity	Hispanic or Latino	6.6	White	5.2	1.3
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Race and/or Ethnicity	Hispanic or Latino	7.3	White	6	1.2
HCAHPS survey: Received information and education	Race and/or Ethnicity	Asian	78.6	Black or African American	95.2	1.2
HCAHPS survey: Received information and education	Age (excluding maternal measures)	65 and older	81.2	35 to 49	94.6	1.2
HCAHPS survey: Received information and education	Expected Payor	Medicare	79.9	Private	92.8	1.2
HCAHPS survey: Received information and education	Race and/or Ethnicity	White	82.9	Black or African American	95.2	1.1

Plan to address disparities identified in the data

HCAHPS survey: Q. 17 Received information and education (H-COMP-6-Y-P) The disparity group for the patient population to improve the HCAHPS survey question on "During this hospital stay, did you get information in writing about what symptoms or health problems to look out for after you left the hospital" include: - Asians - 65 years + - Medicare - White Goal: Improve the HCAHPS survey question 23, "During this hospital stay, did you get information in writing about what symptoms or health problems to look out for after you left the hospital" by 3% in the next 18 months, achieved by the following actions: - Teach Back - Teach back is utilized to educate and validate patient understanding of their medication's purpose and side effects - Medication Information and Side Effects Sheet - Included in patient admission and discharge folder specific to new medications. Available in both English and Spanish. - AVS (After Visit Summary) - Patients are provided the AVS / discharge summary at discharge which is a written document explaining why they were hospitalized, medications prescribed, signs/symptoms to watch for, how to care for self, follow-up appointments - Medication Management Clinic - Patients with chronic or complex conditions are referred to the Medication Management Clinic after discharge for pharmacy services such as coordinating medication therapy, assess appropriateness of medications, adjust medications, review/educate about current medications, support access to medication refills - Bedside shift report - Off-going RN in-person hand off to the oncoming RN during shift report and at the bedside so patients/family members can ask questions - Hourly rounding - RNs and CNAs round hourly on patients to ensure their needs are being met and able to ask questions - Leader rounding - Unit

leaders round on patients asking scripted questions regarding the patient's perception of how care is being delivered and to allow the opportunity to provide information/education to the patient and family - Patient Care Boards posted in each patient's room provide information to the patient/family of who their care team is, activity level, diet status, next scheduled medication time, patient specific needs and a section for patients/families to write questions they may have - "What Matters Most" boards - During the patient's stay, the patient's RN asks the patient "what matters most" to them while in the hospital. The patient's responses are written down for the entire care team to see when they visit the patient and can incorporate the patient's wishes into the care provided - CyraCom translator phone - Used when patients/families speak another language other than English and important information needs to be conveyed by the care team or vice versa All-Cause Unplanned 30-Day Hospital Readmission Rate (HCAI-SS-HWR) All-Cause Unplanned 30-Day Hospital Readmission Rate, by Behavioral Health Diagnosis (No Behavioral Health Disorders) All-Cause Unplanned 30-Day Hospital Readmission Rate, by Behavioral Health Diagnosis (MHD) The disparity group for the patient populations to improve all-cause unplanned 30-day hospital readmission rate (see above) include: - Asians - Other Payor - Black or African American - Male - Hispanic or Latino Goal: Reduce 30-day readmission rates by 10% within the next 18 months, achieved by the following actions: - Utilize evidence-based readmission risk assessment tool to flag high risk patients - Standardized work for Administrative Staff to schedule follow-up Primary Care appointments - Include follow-up appointment education into discharge education - Refer patients lacking a Primary Care Physician to Post Discharge Clinic and/or free or low-cost Vasek Polak clinic - Assess all patients for SDOH needs - Engage Social Work to provide local community resources from FindHelp - Partner with Community Health Investment to support connection to community resources - Implement a multidisciplinary readmission prevention discharge checklist - Implement Pharmacy led medication reconciliation on admission and discharge - Refer patients to hospital outpatient Medication Management Clinic - Order Home Health referrals, if applicable, for all Heart Failure patients - Educate patients of an automatic discharge follow-up call within 48 hours of discharge - Consideration of advanced care planning conversations with all high-risk patients diagnosed with Heart Failure, Renal and/or other complex conditions - For behavioral health patients: o Include behavioral health assessment early in the admission o Engage mental health resources into discharge planning, including substance use disorders

Performance in the priority area

General acute care hospitals are required to provide hospital equity plans that address the top 10 disparities by identifying population impact and providing measurable objectives and specific timeframes. For each disparity, hospital equity plans will address performance across priority areas: person-centered care, patient safety, addressing patient social drivers of health, effective treatment, care coordination, and access to care.

Person-centered care

- o "What Matters Most" boards -the RN asks the patient "what matters most" while in the hospital. Patient responses are written down for the entire care team to see to incorporate patient wishes into the care provided
- o Patient Care Boards posted in each patient room provide information to the patient/family of who their care team is, activity level, diet status, patient specific needs and a section for patients/families to write questions
- o Screen all patients for preferred language, ensure qualified interpreters are available for every non-English encounter. Culturally tailored educational materials are provided to support understanding and engagement, enabling every patient to fully comprehend their care plan and actively participate in decision-making

Metrics and Improvements:

- 1) Monitor patient care board completeness and care plans documented with patient-stated goals

2) Analyze patient experience data, identify disparities, implement targeted improvements 3) Monitor and improve the use of interpreters 4) Stratify advanced care planning data by race, ethnicity, language, other demographics

Patient safety

o All leaders attend live training on HRO (High Reliability Organization) Topics included: - Behavior & Tools - Create Psychological Safety - Lead Reliable Operations & Guide Local Learning Systems o All departments have learning/performance boards which include quality/performance metrics, Stoplight Report, Good Catch Awards, RCAs, employee recognition o Monitor and stratify key safety indicators such as falls, medication errors, hospital-acquired infections for all patients, triggering RCA for events meeting Serious Safety Event criteria Metrics and Improvements: 1) Conduct monthly reviews of safety data stratified by demographic factors 2) Develop and implement action plans per data analysis. 3) Engage dedicated workgroups with Executive Sponsorship to provide governance and oversight for improvement initiatives

Addressing patient social drivers of health

o All inpatients, outpatients, and ED patients are assessed for 5 social SDoH upon admission/entrance into the hospital. The SDoH are housing, utilities, food, transportation, interpersonal safety. Current screening: > 95%. Highest positivity rate: housing o FindHelp is utilized to generate a comprehensive list of local resources to support health and well-being, provided at the time of discharge and written on their discharge summary o Community Health follows up with patients that screen positive after discharge to reduce barriers to resource connection o SDoH data is integrated into care planning and population health strategies to ensure interventions are equitable and responsive to the unique needs of our diverse patient population Metrics and Improvements: 1) Conduct monthly reviews of safety data stratified by demographic factors 2) Develop and implement action plans per data analysis 3) Engage dedicated workgroups to provide governance and oversight for improvement initiatives

Performance in the priority area continued

Performance across all of the following priority areas.

Effective treatment

o Patients with signs/symptoms of sepsis are treated effectively o 12-month SEP-1 bundle compliance=70.8% o Antibiotic 24 hrs prior or within 1 hour of hypotension Oct YTD = 82.6% o Sepsis order set utilization = 91.6% Metrics and Improvements: 1) Stratify clinical outcomes and adherence to evidence-based protocols by race, ethnicity, language, other demographic factors 2) Identify disparities and implement targeted interventions to improve equity in treatment effectiveness 3) Engage the Sepsis Committee to provide governance and oversight for improvement initiatives

Care coordination

o Administrative staff schedule follow-up appointments for high risk for readmission patients o Refer patients lacking a Primary Care Physician to Providence Hospitalist Group Post Discharge Clinic Metrics and Improvements: 1) Develop standardized discharge and transition protocols to include culturally and linguistically appropriate instructions 2) Monitor transition success rates and identify disparities across demographic groups 3) Develop and implement action plans per data and current state analysis 4) Track follow-up appointment completion rates by race, ethnicity, language, other demographics

Access to care

o Patient Flow meeting addresses patient transfers to lower level of care, discharges, conditional discharges, potential delays, services needed at discharge o Collaborating with Physicians to identify patients for discharge 24 hours prior o Reducing length of stay (LOS), increasing throughput o Medication Management Clinic o Primary Care Services referrals to Post Discharge Clinic and low-cost or free Vasek Polak Clinic Metrics and Improvements: 1) stratify LOS by race, ethnicity, language, other demographic factors 2) Identify disparities and develop strategies to improve equity LOS outcome equity and post discharge care access

Methodology Guidelines

Did the hospital follow the methodology in the Measures Submission Guide? (Y/N)
