

# Hospital Equity Measures Report

## General Information

Report Type:	Hospital Equity Measures Report
Year:	2024
Hospital Name:	ADVENTIST HEALTH LODI MEMORIAL
Facility Type:	General Acute Care Hospital
Hospital HCAI ID:	106390923
Report Period:	01/01/2024 - 12/31/2024
Status:	Complete
Due Date:	11/29/2025
Last Updated:	03/18/2026
Hospital Location with Clean Water and Air:	N
Hospital Web Address for Equity Report:	<a href="http://www.adventisthealth.org/about-us/community-benefit/">www.adventisthealth.org/about-us/community-benefit/</a>

## Overview

Assembly Bill No. 1204 requires the Department of Health Care Access and Information (HCAI) to develop and administer a Hospital Equity Measures Reporting Program to collect and post summaries of key hospital performance and patient outcome data regarding sociodemographic information, including but not limited to age, sex, race/ethnicity, payor type, language, disability status, and sexual orientation and gender identity.

Hospitals (general acute, children's, and acute psychiatric) and hospital systems are required to annually submit their reports to HCAI. These reports contain summaries of each measure, the top 10 disparities, and the equity plans to address the identified disparities. HCAI is required to maintain a link on the HCAI website that provides access to the content of hospital equity measures reports and equity plans to the public. All submitted hospitals are required to post their reports on their websites, as well.

## Laws and Regulations

For more information on Assembly Bill No. 1204, please visit the following link by copying and pasting the URL into your web browser:

[https://leginfo.legislature.ca.gov/faces/billTextClient.xhtml?bill\\_id=202120220AB1204](https://leginfo.legislature.ca.gov/faces/billTextClient.xhtml?bill_id=202120220AB1204)

## Hospital Equity Measures

### Joint Commission Accreditation

General acute care hospitals are required to report three structural measures based on the Commission Accreditation's Health Care Disparities Reduction and Patient-Centered Communication Accreditation Standards. For more information on these measures, please visit the following link by copying and pasting the URL into your web browser:

<https://www.jointcommission.org/standards/r3-report/r3-report-issue-36-new-requirements-to-reduce>

-health-care-disparities/

The first two structural measures are scored as "yes" or "no"; the third structural measure comprises the percentages of patients by five categories of preferred languages spoken, in addition to one other/unknown language category.

Designate an individual to lead hospital health equity activities (Y = Yes, N = No).

Y

Provide documentation of policy prohibiting discrimination (Y = Yes, N = No).

Y

Number of patients that were asked their preferred language, five defined categories and one other/unknown languages category.

67879

Table 1. Summary of preferred languages reported by patients.

Languages	Number of patients who report preferring language	Total number of patients	Percentage of total patients who report preferring language (%)
English Language	58879	67879	86.7
Spanish Language	7654	67879	11.3
Asian Pacific Islander Languages	1029	67879	1.5
Middle Eastern Languages	68	67879	0.1
American Sign Language	26	67879	0.0
Other Languages	223	67879	0.3

**Centers for Medicare & Medicaid Services (CMS) Hospital Commitment to Health Equity Structural (HCHE) Measure**

There are five domains that make up the CMS Hospital Commitment to HCHE measures. Each domain is scored as "yes" or "no." In order to score "yes," a general acute care hospital is required to confirm all the domain's attestations. Lack of one or more of the attestations results in a score of "no." For more information on the CMS Hospital Commitment to HCHE measures, please visit the following link by copying and pasting the URL into your web browser:

<https://data.cms.gov/provider-data/topics/hospitals/health-equity>

**Centers for Medicare & Medicaid Services (CMS) Hospital Commitment to Health Equity Structural (HCHE) Measure Domain 1: Strategic Planning (Yes/No)**

- Our hospital strategic plan identifies priority populations who currently experience health disparities.
- Our hospital strategic plan identifies healthcare equity goals and discrete action steps to achieve these goals.
- Our hospital strategic plan outlines specific resources that have been dedicated to achieving our equity goals.
- Our hospital strategic plan describes our approach for engaging key stakeholders, such as community-based organizations.

Y

**CMS HCHE Measure Domain 2: Data Collection (Yes/No)**

- Our hospital strategic plan identifies healthcare equity goals and discrete action steps to achieve these goals.

- Our hospital has training for staff in culturally sensitive collection of demographics and/or social determinant of health information.
- Our hospital inputs demographic and/or social determinant of health information collected from patients into structured, interoperable data elements using a certified electronic health record (EHR) technology.

Y

CMS HCHE Measure Domain 3: Data Analysis (Yes/No)

- Our hospital stratifies key performance indicators by demographic and/or social determinants of health variables to identify equity gaps and includes this information in hospital performance dashboards.

Y

CMS HCHE Measure Domain 4: Quality Improvement (Yes/No)

- Our hospital participates in local, regional or national quality improvement activities focused on reducing health disparities.

Y

CMS HCHE Measure Domain 5: Leadership Engagement (Yes/No)

- Our hospital senior leadership, including chief executives and the entire hospital board of trustees, annually reviews our strategic plan for achieving health equity.
- Our hospital senior leadership, including chief executives and the entire hospital board of trustees, annually review key performance indicators stratified by demographic and/or social factors.

Y

**Centers for Medicare & Medicaid Services (CMS) Social Drivers of Health (SDOH)**

General acute care hospitals are required to report on rates of screenings and intervention rates among patients above 18 years old for five health related social needs (HRSN), which are food insecurity, housing instability, transportation problems, utility difficulties, and interpersonal safety. These rates are reported separately as being screened as positive for any of the five HRSNs, positive for each individual HRSN, and the intervention rate for each positively screened HRSN. For more information on the CMS SDOH, please visit the following link by copying and pasting the URL into your web browser:

<https://www.cms.gov/priorities/innovation/key-concepts/social-drivers-health-and-health-related-social-needs>

Number of patients admitted to an inpatient hospital stay who are 18 years or older on the date of admission and are screened for all of the five HRSN

2287

Total number of patients who are admitted to a hospital inpatient stay and who are 18 years or older on the date of admission

4330

Rate of patients admitted for an inpatient hospital stay who are 18 years or older on the date of admission, were screened for an HRSN, and who screened positive for one or more of the HRSNs

52.8

Table 2. Positive screening rates and intervention rates for the five Health Related Social Needs of the Centers of Medicare & Medicaid Services (CMS) Social Drivers of Health (SDOH).

Social Driver of Health	Number of positive screenings	Rate of positive screenings (%)	Number of positive screenings who received intervention	Rate of positive screenings who received intervention (%)
Food Insecurity	182	8.0	0	
Housing Instability	218	9.5	0	
Transportation Problems	142	6.2	0	
Utility Difficulties	78	3.4	0	
Interpersonal Safety	12	0.5	0	

## Core Quality Measures for General Acute Care Hospitals

There are two quality measures from the Hospital Consumer Assessment of Healthcare Providers and Systems (HCAHPS) survey. For more information on the HCAHPS survey, please visit the following link by copying and pasting the URL into your web browser:

<https://hcahpsonline.org/en/survey-instruments/>

## Patient Recommends Hospital

The first HCAHPS quality measure is the percentage of patients who would recommend the hospital to friends and family. For this measure, general acute care hospitals provide the percentage of patient respondents who responded "probably yes" or "definitely yes" to whether they would recommend the hospital, the percentage of the people who responded to the survey (i.e., the response rate), and the inputs for the percentages. The percentages and inputs are stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding HCAHPS question number is 19.

Number of respondents who replied "probably yes" or "definitely yes" to HCAHPS Question 19, "Would you recommend this hospital to your friends and family?"

427

Total number of respondents to HCAHPS Question 19

459

Percentage of total respondents who responded "probably yes" or "definitely yes" to HCAHPS Question 19

93.0

Total number of people surveyed on HCAHPS Question 19

2700

Response rate, or the percentage of people who responded to HCAHPS Question 19

17.0

Table 3. Patient recommends hospital by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

<b>Race and/or Ethnicity</b>	<b>Number of "probably yes" or "definitely yes" responses</b>	<b>Total number of responses</b>	<b>Percent of "probably yes" or "definitely yes" responses (%)</b>	<b>Total number of patients surveyed</b>	<b>Response rate of patients surveyed (%)</b>
<b>American Indian or Alaska Native</b>

Female-to-male (FTM)/ transgender male/trans man					
Male					
Male-to-female (MTF)/ transgender female/trans woman					
Non-conforming gender					
Additional gender category or other					
Not disclosed					

## Patient Received Information in Writing

The second HCAHPS quality measure is the percentage of patients who reported receiving information in writing on symptoms and health problems to look out for after leaving the hospital. General acute care hospitals are required to provide the percentage of patient respondents who responded "yes" to being provided written information, the percentage of the people who responded to the survey (i.e., the response rate), and the inputs for these percentages. These percentages and inputs are stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding HCAHPS question number is 17.

Number of respondents who replied "yes" to HCAHPS Question 17, "During this hospital stay, did you get information in writing about what symptoms or health problems to look out for after you left the

hospital?"

399  
Total number of respondents to HCAHPS Question 17  
459

Percentage of respondents who responded "yes" to HCAHPS Question 17  
86.9

Total number of people surveyed on HCAHPS Question 17  
2700

Response rate, or the percentage of people who responded to HCAHPS Question 17  
17.0

Table 4. Patient reports receiving information in writing about symptoms or health problems by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

## Agency for Healthcare Research and Quality (AHRQ) Indicators

General acute care hospitals are required to report on two indicators from the Agency for Healthcare Research and Quality (AHRQ). For general information about AHRQ indicators, please visit the following link by copying and pasting the URL into your web browser:

<https://qualityindicators.ahrq.gov/>

## Pneumonia Mortality Rate

The Pneumonia Mortality Rate is defined as the rate of in-hospital deaths per 1,000 hospital discharges with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission for patients ages 18 years and older. General acute care hospitals report the Pneumonia Mortality Rate by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding AHRQ Inpatient Quality Indicator is 20. For more information about this indicator, please visit the following link by copying and pasting the URL into your web browser:

[https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI\\_20\\_Pneumonia\\_Mortality\\_Rate.pdf](https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_20_Pneumonia_Mortality_Rate.pdf)

## Death Rate among Surgical Inpatients with Serious Treatable Complications

The Death Rate among Surgical Inpatients with Serious Treatable Complications is defined as the rate of in-hospital deaths per 1,000 surgical discharges among patients ages 18-89 years old or obstetric patients with serious treatable complications. General acute care hospitals report this measure by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding AHRQ Patient Safety Indicator is 04. For more information about this indicator, please visit the following link by copying and pasting the URL into your web browser:  
[https://qualityindicators.ahrq.gov/Downloads/Modules/PSI/V2023/TechSpecs/PSI\\_04\\_Death\\_Rate\\_among\\_Surgical\\_Inpatients\\_with\\_Serious\\_Treatable\\_Complications.pdf](https://qualityindicators.ahrq.gov/Downloads/Modules/PSI/V2023/TechSpecs/PSI_04_Death_Rate_among_Surgical_Inpatients_with_Serious_Treatable_Complications.pdf)

## California Maternal Quality Care Collaborative (CMQCC) Core Quality Measures

There are three core quality maternal measures adopted from the California Maternal Quality Care Collaborative (CMQCC).

### CMQCC Nulliparous, Term, Singleton, Vertex (NTSV) Cesarean Birth Rate

The CMQCC Nulliparous, Term, Singleton, Vertex (NTSV) Cesarean Birth Rate is defined as nulliparous women with a term (at least 37 weeks gestation), singleton baby in a vertex position delivered by cesarian birth. General acute care hospitals report the NTSV Cesarean Birth Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. For more information, please visit the following link by copying and pasting the URL into your web browser:

<https://www.cmqcc.org/quality-improvement-toolkits/supporting-vaginal-birth/ntsv-cesarean-birth-measure-specifications>

## CMQCC Vaginal Birth After Cesarean (VBAC) Rate

The CMQCC Vaginal Birth After Cesarean (VBAC) Rate is defined as vaginal births per 1,000 deliveries by patients with previous Cesarean deliveries. General acute care hospitals report the VBAC Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The VBAC Rate uses the specifications of AHRQ Inpatient Quality Indicator 22. For more information, please visit the following link by copying and pasting the URL into your web browser:

[https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI\\_22\\_Vaginal\\_Birth\\_After\\_Cesarean\\_\(VBAC\)\\_Delivery\\_Rate\\_Uncomplicated.pdf](https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_22_Vaginal_Birth_After_Cesarean_(VBAC)_Delivery_Rate_Uncomplicated.pdf)

Number of vaginal delivery among cases with previous Cesarean delivery that meet the inclusion and exclusion criteria

suppressed

Total number of birth discharges with previous Cesarean delivery that meet the inclusion and exclusion criteria

suppressed

Rate of vaginal delivery per 1,000 deliveries by patients with previous Cesarean deliveries

suppressed

## CMQCC Exclusive Breast Milk Feeding Rate

The CMQCC Exclusive Breast Milk Feeding Rate is defined as the newborns per 100 who reached at least 37 weeks of gestation (or 3000g if gestational age is missing) who received breast milk

exclusively during their stay at the hospital. Other criteria are that the newborns did not go to the neonatal intensive care unit (NICU), transfer, or die, did not reflect multiple gestation, and did not have codes for parenteral nutrition or galactosemia. General acute care hospitals report the Exclusive Breast Milk Feeding Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The CMQCC Exclusive Breast Milk Feeding Rate uses the Joint Commission National Quality Measure PC-05. For more information, please visit the following link by copying and pasting the URL into your web browser: <https://manual.jointcommission.org/releases/TJC2024B/MIF0170.html>

Number of newborn cases that were exclusively fed breast milk during their hospital stay and meet the inclusion and exclusion criteria

104

Total number of newborn cases born in the hospital that meet the inclusion and exclusion criteria

142

Rate of newborn cases per 100 that were exclusively fed breast milk during their hospital stay and meet the inclusion and exclusion criteria

73.2

Table 9. Exclusive Breast Milk Feeding Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

## HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate

General acute care hospitals are required to report several HCAI All-Cause Unplanned 30-Day Hospital Readmission Rates, which are broadly defined as the percentage of hospital-level, unplanned, all-cause readmissions after admission for eligible conditions within 30 days of hospital discharge for patients aged 18 years and older. These rates are first stratified based on any eligible condition, mental health disorders, substance use disorders, co-occurring disorders, and no behavioral health diagnosis. Then, each condition-stratified hospital readmission rate is further stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. For more information on the HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate, please visit the following link by copying and pasting the URL into your web browser:

[https://hcai.ca.gov/wp-content/uploads/2024/10/HCAI-All-Cause-Readmission-Rate-Exclusions\\_ADA.pdf](https://hcai.ca.gov/wp-content/uploads/2024/10/HCAI-All-Cause-Readmission-Rate-Exclusions_ADA.pdf)

## HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate – Any Eligible Condition

Number of inpatient hospital admissions which occurs within 30 days of the discharge date of an eligible index admission and were 18 years or older at time of admission

769

Total number of patients who were admitted to the general acute care hospital and were 18 years or older at time of admission

5268

Rate of hospital-level, unplanned, all-cause readmissions after admission for any eligible condition

within 30 days of hospital discharge for patients aged 18 and older

14.6

Table 10. HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate for any eligible condition by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

<b>Race and/or Ethnicity</b>	<b>Number of inpatient readmissions</b>	<b>Total number of admitted patients</b>	<b>Readmission rate (%)</b>

## Health Equity Plan

All general acute care hospitals report a health equity plan that identifies the top 10 disparities and a written plan to address them.

## Top 10 Disparities

Disparities for each hospital equity measure are identified by comparing the rate ratios by stratification groups. Rate ratios are calculated differently for measures with preferred low rates and those with preferred high rates. Rate ratios are calculated after applying the California Health and Human Services Agency's "Data De-Identification Guidelines (DDG)," dated September 23, 2016.

Table 15. Top 10 disparities and their rate ratio values.

Measures	Stratifications	Stratification Group	Stratification Rate	Reference Group	Reference Rate	Rate Ratio
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Age (excluding maternal measures)	65 and older	17.3	18 to 34	6.5	2.7
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Expected Payor	Medicare	17.9	Private	7.2	2.5
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Age (excluding maternal measures)	50 to 64	16.1	18 to 34	6.5	2.5
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Expected Payor	Medicaid	13.5	Private	7.2	1.9
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Age (excluding maternal measures)	35 to 49	11.9	18 to 34	6.5	1.8
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Race and/or Ethnicity	Black or African American	18.8	Hispanic or Latino	12.3	1.5
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate, stratified by behavioral health diagnosis (No Behavioral Health Diagnosis)	Sex Assigned at Birth	Male	16.7	Female	11.7	1.4
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Sex Assigned at Birth	Male	17.0	Female	13.0	1.3
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Race and/or Ethnicity	White	15.3	Hispanic or Latino	12.3	1.2
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Race and/or Ethnicity	Asian	13.5	Hispanic or Latino	12.3	1.1

## Plan to address disparities identified in the data

The 2025 Adventist Health Lodi Memorial Community Health Needs Assessment (CHNA) identified ten key disparities affecting San Joaquin County. Guided by the upcoming Community Health Improvement Plan (CHIP) and Community Health Implementation Strategy (CHIS), the following actions, populations, objectives, and timelines have been defined for 2025–2028 implementation.

### 1. Access to Care

Expand mobile and pop-up clinics, recruit culturally and linguistically competent providers, and assist residents with insurance enrollment. Strengthen partnerships with community organizations to improve reach and trust.

Impact: Underserved residents, women of color, and rural populations.

Goals: Increase adult insurance coverage to 90% and reduce uninsured children below 2% by 2028.

### 2. Mental and Behavioral Health (Including Substance Use)

Integrate behavioral health into primary care, expand crisis response services, and continue the Substance Use Navigator (SUN) program in emergency departments. Promote youth mental health and substance use prevention.

Impact: Youth, unhoused individuals, and rural residents.

Goals: Reduce suicide and overdose deaths by 10% and increase behavioral health provider access by 2028.

### 3. Chronic Disease / Healthy Eating, Active Living (HEAL)

Address obesity, diabetes, and heart disease through nutrition education, affordable food access, and increased safe spaces for physical activity. Collaborate with schools, food networks, and parks.

Impact: Low-income residents, communities of color, and food desert areas.

Goals: Reduce obesity and diabetes rates by 5% and increase local access to healthy food options by 2028.

#### 4. Housing

Expand transitional and supportive housing programs, increase rental and utility assistance, and advocate for affordable housing near employment and transit hubs.

Impact: Low-income families, immigrants, older adults, and individuals with disabilities.

Goals: Reduce homelessness by 15% and increase housing stability indicators by 2028.

#### 5. Economic Stability

Strengthen workforce development, job readiness programs, and digital literacy training to improve post-pandemic recovery. Support local business and equitable hiring.

Impact: Unemployed and underemployed residents.

Goals: Decrease unemployment disparities by 50% and raise average household income in targeted areas by 10% by 2028.

#### 6. Social Support

Expand caregiver and youth mentorship programs, community resource hubs, and elder support groups to combat social isolation and improve resilience.

Impact: Rural residents, caregivers, and foster youth aging into adulthood.

Goals: Reduce social isolation by 10% and increase participation in community support programs by 25% by 2028.

#### 7. Community Safety

Collaborate with local coalitions and law enforcement on violence prevention and neighborhood revitalization. Increase lighting and safe public spaces to promote outdoor activity.

Impact: Children, older adults, and residents in high-crime neighborhoods.

Goals: Reduce violent crime and injury-related hospitalizations by 10% by 2028.

#### 8. Education

Expand preschool enrollment, tutoring, and career readiness programs. Partner with schools for health education and post-secondary preparation.

Impact: Students of color, English learners, and rural youth.

Goals: Improve preschool enrollment to 45% and raise graduation rates by 5% by 2028.

#### 9. Food Security

Enhance food bank networks, mobile pantries, and community gardens. Increase SNAP participation and nutrition education in low-income communities.

Impact: Low-income households and rural families.

Goals: Decrease food insecurity by 10% and raise SNAP participation by 15% by 2028.

#### 10. Transportation

Work with local transit agencies to improve transportation to healthcare, employment, and food access. Develop safe walking and biking paths and expand paratransit options.

Impact: Seniors, rural residents, and people with disabilities.

Goals: Increase access to reliable transportation for medical visits by 20% and reduce missed appointments by 2028.

#### Implementation and Evaluation

All strategies align with the 2025–2028 CHIP and CHIS frameworks through the Healthier San Joaquin Collaborative. Progress will be evaluated annually using key performance indicators such as access rates, chronic disease outcomes, and social determinant metrics. Results will be shared publicly via [HealthierSanJoaquin.org](https://HealthierSanJoaquin.org) and annual hospital reports.

Through these coordinated, evidence-based actions, Adventist Health Lodi Memorial aims to advance equity, reduce health disparities, and promote long-term wellness for all San Joaquin County residents.

## Performance in the priority area

General acute care hospitals are required to provide hospital equity plans that address the top 10 disparities by identifying population impact and providing measurable objectives and specific timeframes. For each disparity, hospital equity plans will address performance across priority areas: person-centered care, patient safety, addressing patient social drivers of health, effective treatment, care coordination, and access to care.

### Person-centered care

Adventist Health Lodi Memorial demonstrates strong performance in Person-Centered Care, aligning its mission, "Living God's love by inspiring health, wholeness, and hope", with a compassionate, inclusive, and evidence-based approach to healthcare. The organization prioritizes dignity, cultural respect, and partnership with patients and families to ensure every experience reflects the unique needs and values of those it serves.

#### A Mission-Driven, Whole-Person Approach

Person-centered care is embedded in Adventist Health's identity as a faith-based system focused on physical, mental, spiritual, and social well-being. At Lodi Memorial, this translates into care that honors individual preferences and builds trust. This holistic philosophy is supported by chaplaincy services and volunteer programs that provide emotional and spiritual care, fostering a healing environment built on empathy and respect. Nursing teams uphold compassionate communication and comfort rounding to anticipate patient needs, reduce anxiety, and strengthen the healing experience. From registration to discharge, every interaction is guided by a commitment to wholeness.

#### Integrated Care and Continuous Improvement

Performance is reflected in efforts to improve access and coordination across the care journey. Lodi Memorial operates a network of primary care, specialty, and urgent care clinics to create seamless continuity. Patients benefit from coordinated referrals, individualized discharge planning, and care navigation that enhances safety and reduces preventable readmissions. This framework for care is reinforced by a robust commitment to continuous improvement. Patient experience feedback, collected through HCAHPS surveys and direct input, informs service enhancements and staff development. Employees receive training in empathy and trauma-informed care, while practices like bedside shift reports and teach-back methods empower patients to be active partners in their care decisions.

#### Cultural Responsiveness and Community Health

Recognizing the diverse needs of San Joaquin County, where nearly half of residents speak a language other than English, the hospital champions cultural and linguistic responsiveness. Lodi Memorial expands bilingual staffing, interpreter services, and culturally relevant education to ensure equitable communication. This extends beyond the hospital walls through partnerships with faith organizations and nonprofits, with mobile clinics designed to meet patients where they are. Furthermore, Lodi Memorial actively integrates behavioral health and social support into its care model. Programs like the Substance Use Navigator (SUN) connect patients in crisis with essential services, while case management teams address social determinants of health by coordinating referrals for housing, food, and transportation. Through the Healthier San Joaquin Collaborative, the hospital helps design community-wide strategies to reduce health disparities, ensuring care extends into the neighborhoods it serves.

#### Summary of Performance

Adventist Health Lodi Memorial's performance in Person-Centered Care reflects a deep, system-wide dedication to treating every individual as a whole person. Its strengths lie in a compassionate culture, the integration of physical and behavioral health, and a firm commitment to partnership and equity. By listening to patients, respecting their values, and tailoring care to their needs, Lodi

Memorial fulfills its mission to inspire health, wholeness, and hope—providing care that is not only clinically excellent but personally meaningful.

## Patient safety

### Performance in the Priority Area of Patient Safety

Adventist Health Lodi Memorial demonstrates strong, sustained performance in patient safety, driven by a systemwide culture of high reliability and continuous improvement. The organization's approach integrates evidence-based practices, proactive risk management, and a commitment to transparency and learning, ensuring alignment with national standards of clinical excellence and its mission to inspire health, wholeness, and hope.

### A Culture of High Reliability and Engagement

A robust safety culture is the foundation of Lodi Memorial's performance. Guided by the principles of a High Reliability Organization (HRO), the hospital empowers staff to prevent errors and report near misses without fear of reprisal. Daily safety huddles, leadership rounding, and unit-based safety boards reinforce accountability and proactive communication. This culture is sustained through continuous workforce engagement and skill development. Annual safety competencies, interprofessional mock codes, and simulation training ensure teams are prepared for critical events, while "Good Catch" reports are recognized to encourage vigilance in identifying hazards before harm occurs.

### Proactive Prevention and Clinical Excellence

Lodi Memorial excels in preventing hospital-acquired conditions through targeted, data-driven initiatives.

- **Infection Prevention:** A dedicated team uses real-time surveillance to track and prevent hospital-acquired infections (HAIs). Strict adherence to hand hygiene, environmental disinfection audits, and nurse-led education on central line and catheter management have yielded positive results, aligning practices with CDC and state standards.
- **Medication Safety:** Robust protocols, including barcode medication administration, electronic order verification, and pharmacy-led reviews, are in place to prevent adverse drug events. Ongoing audits and system alerts within the electronic health record have significantly reduced medication-related safety incidents.
- **Fall and Pressure Injury Reduction:** A multidisciplinary committee monitors fall risk in real-time, implementing visual cues and early physical therapy engagement. Unit-based dashboards promote transparency and accountability, contributing to sustained decreases in inpatient falls and hospital-acquired pressure injuries.

### Safe Systems and Transparent Communication

Effective systems and communication are central to preventing adverse events. The hospital utilizes standardized tools like SBAR (Situation, Background, Assessment, Recommendation) for all care transitions to ensure safe handoffs. Case managers and nurses collaborate on discharge planning, empowering patients and families with clear instructions to reduce readmissions.

Performance is measured against national benchmarks, including Leapfrog Hospital Safety Grades and Core Measure compliance. Quality and Patient Safety Dashboards are reviewed monthly by leadership to drive improvement and promote accountability. Furthermore, Lodi Memorial maintains a high state of emergency readiness through regular drills and simulation training, ensuring a secure environment of care. As part of the Adventist Health network, the hospital also participates in systemwide safety collaboratives, sharing best practices to elevate care across the region.

### Summary of Performance

Adventist Health Lodi Memorial consistently performs strongly in patient safety through proactive prevention, transparent reporting, and a deeply embedded culture of high reliability. The organization has successfully reduced hospital-acquired conditions, strengthened team communication, and reinforced the principle that safety is everyone's responsibility. Through these coordinated

strategies, Lodi Memorial ensures every patient receives care in the safest environment possible, upholding its mission through the highest standards of safety and compassion.

## Addressing patient social drivers of health

### Performance in Addressing Patient Social Determinants of Health

Adventist Health Lodi Memorial demonstrates strong, measurable performance in addressing the social determinants of health (SDOH) by combining data-driven strategies, community collaboration, and a whole-person care model. Guided by its mission, "Living God's love by inspiring health, wholeness, and hope"—the organization works to treat not only illness but also the underlying economic, environmental, and social conditions that shape community well-being and health equity.

### A Framework for Equity: Screening and Strategic Partnerships

The commitment to addressing SDOH is foundational to Lodi Memorial's approach, directly linked to the priorities identified in the 2025 Community Health Needs Assessment (CHNA): access to care, behavioral health, and chronic disease.

To tackle these issues at their root, the hospital has embedded systematic SDOH screening into its clinical workflows. Case management and care coordination teams assess patients for barriers related to housing, food insecurity, transportation, and financial hardship. This process enables early identification of unmet needs, which are documented in the electronic health record to track referrals and ensure continuity of care.

To connect patients with vital resources, Lodi Memorial actively collaborates with community organizations through the Healthier San Joaquin Collaborative. This network unites hospitals, public health agencies, and nonprofits, enabling seamless referrals to housing services, food banks, and transportation programs. This effort ensures patients are connected to a robust continuum of care that extends far beyond the hospital's walls.

### Targeted Programs Addressing Critical Community Needs

Lodi Memorial's initiatives are designed to directly respond to the social and economic barriers identified in the community. Key programs include:

- **Access to Care:** Mobile and pop-up clinics, developed in partnership with local organizations, deliver preventive care, vaccinations, and health education directly to underserved neighborhoods.
- **Behavioral Health:** The Substance Use Navigator (SUN) program provides a critical hospital-to-community linkage for individuals with substance use disorders, addressing behavioral health challenges alongside social and economic instability.
- **Economic & Housing Stability:** Social workers connect patients to financial assistance, rental support, and local housing authorities to mitigate readmissions linked to unsafe living conditions.
- **Transportation Access:** To overcome a primary barrier to care, the hospital partners with regional transit and ride-assistance programs, ensuring patients can attend medical appointments and follow-up visits.

### Data-Driven Accountability and Continuous Improvement

Performance is evaluated through rigorous data review, community feedback, and outcome tracking within the Community Health Improvement Plan (CHIP). Metrics include referral completion rates, reductions in readmissions, and patient satisfaction with social support navigation. Data is shared publicly through community benefit reports, ensuring transparency and accountability. This commitment is further supported by investing in staff education on health equity and trauma-informed care, equipping teams to compassionately and efficiently address social barriers.

### Summary of Performance

Adventist Health Lodi Memorial's performance in addressing SDOH reflects a proactive, collaborative, and equitable approach. Through systematic screening, robust partnerships, and targeted community investments, the organization effectively bridges the gap between clinical services and the conditions that shape everyday health. This whole-person strategy empowers

individuals and families, advancing stability, hope, and well-being across the community.

## **Performance in the priority area continued**

Performance across all of the following priority areas.

### **Effective treatment**

#### **Performance in the Priority Area of Effective Treatment**

Adventist Health Lodi Memorial demonstrates strong and consistent performance in Effective Treatment by integrating evidence-based practice, interdisciplinary collaboration, and a deep commitment to clinical excellence. Guided by its mission, "Living God's love by inspiring health, wholeness, and hope", the organization delivers high-quality, outcome-driven care, ensuring every patient receives the right treatment at the right time.

#### **A Foundation of Evidence-Based Clinical Excellence**

Lodi Memorial's clinical programs are built on a framework of evidence-based guidelines to optimize outcomes across all services. Treatment effectiveness is continuously measured against national benchmarks, including CMS Core Measures and Leapfrog Hospital Safety Scores.

This commitment is operationalized through standardized clinical pathways for high-risk conditions such as heart failure, sepsis, and stroke. These pathways reduce care variation and ensure timely interventions. Real-time data dashboards and interdisciplinary huddles allow teams to track adherence to protocols and promptly address any deviations. The hospital's Quality Improvement Program reinforces this structure through regular audits, root cause analyses, and peer reviews, ensuring a cycle of continuous learning and refinement.

#### **Integrated Teams and Advanced Technology**

Effective treatment is delivered through seamless collaboration and modern tools. The hospital has significantly expanded access to specialty services, including cardiology, oncology, and neurology—allowing patients to receive comprehensive care close to home. This integration with primary care enhances continuity and reduces readmissions.

Care teams are supported by an advanced Electronic Health Record (EHR) system that provides clinical decision support, evidence-based order sets, and medication safety alerts. Clinical pharmacists are integral members of the care team, participating in daily rounds, managing high-risk medication regimens, and reconciling medications at transitions of care to minimize adverse drug events. This team-based approach, augmented by telehealth and remote patient monitoring, ensures that effective treatment extends beyond the hospital stay.

#### **Patient-Centered Care and Chronic Disease Management**

Recognizing that effective treatment involves patient partnership, Lodi Memorial fosters shared decision-making through clear communication and education. Providers use teach-back methods to confirm understanding of treatment plans, and strong HCAHPS survey results reflect excellence in communication about care.

This focus extends to prevention and long-term health. The hospital integrates chronic disease management into its care model, offering education on diabetes, hypertension, and nutrition to empower patients. Care navigators connect individuals with community resources to support their health journey, ensuring a holistic approach. This patient-centered culture is upheld by a commitment to continuous learning and workforce excellence, ensuring clinicians remain aligned with the highest standards of care.

#### **Summary of Performance**

Adventist Health Lodi Memorial's performance in Effective Treatment reflects a systemwide commitment to safety, excellence, and compassion. Through data-driven clinical pathways, interdisciplinary teamwork, advanced technology, and strong patient engagement, the hospital

ensures treatments are appropriate, efficient, and highly effective. These coordinated efforts lead to improved outcomes and enhanced patient trust, powerfully fulfilling the organization's mission to inspire health, wholeness, and hope.

## Care coordination

### Performance in the Priority Area of Care Coordination

Adventist Health Lodi Memorial demonstrates strong performance in Care Coordination by fostering seamless communication, collaboration, and patient-centered continuity across the healthcare continuum. The organization's mission, "Living God's love by inspiring health, wholeness, and hope", is reflected in how its teams align to deliver efficient, safe, and integrated care from admission through discharge and beyond.

### A Collaborative, Interdisciplinary Framework

At the heart of Lodi Memorial's success is a robust, interdisciplinary care model. Daily team rounds unite physicians, nurses, case managers, social workers, and pharmacists to develop cohesive care plans based on real-time patient updates. This collaborative structure enhances communication, prevents delays, and reduces care fragmentation. This framework is supported by a commitment to continuous improvement, with performance rigorously measured through metrics like readmission rates, length of stay, and patient satisfaction scores, which are reviewed monthly to guide enhancement initiatives.

### Seamless Patient Navigation and Transitions

Care coordination is woven into the entire patient journey, beginning at admission. Case managers and nurse navigators conduct early assessments to identify and proactively address social barriers like transportation or housing instability. This informs an individualized discharge plan, where structured checklists and "teach-back" methods are used to ensure patients and families understand their care plans, improving adherence and reducing avoidable readmissions. This proactive approach extends beyond the hospital doors. The Care Management department partners closely with skilled nursing facilities, home health agencies, and rehabilitation centers to facilitate smooth transitions. High-risk patients receive follow-up calls within 48 hours of discharge to confirm medication adherence and support early identification of post-discharge complications.

### Integrated Systems and Whole-Person Support

Seamless continuity is powered by an integrated network of care and advanced technology. The hospital's Electronic Health Record (EHR) ensures real-time data sharing between inpatient teams, primary care providers, and specialists, fostering trust and treatment effectiveness.

Recognizing that coordination must address the whole person, Lodi Memorial integrates behavioral and social support into its model. The Substance Use Navigator (SUN) program and behavioral health liaisons connect patients with critical mental health and social resources. This focus is particularly intensive for high-risk patients, for whom care managers use predictive analytics to deploy targeted interventions. The hospital's impact is amplified through deep community partnerships, particularly its role in the Healthier San Joaquin Collaborative, which links patients to a vital network of housing, food, and social support services.

### Summary of Performance

Adventist Health Lodi Memorial's performance in Care Coordination is defined by its comprehensive, team-based, and patient-centered approach. By integrating early planning, proactive multidisciplinary communication, and strong community linkages, the hospital ensures patients experience safe and effective transitions throughout their care journey. These coordinated efforts reduce readmissions, improve outcomes, and powerfully fulfill the organization's mission to provide whole-person care that inspires health, wholeness, and hope.

## Access to care

### Adventist Health Lodi Memorial: Performance in Access to Care

Adventist Health Lodi Memorial demonstrates strong, measurable performance in the priority area of Access to Care, driven by its mission to inspire health, wholeness, and hope. The focus is on removing barriers, expanding capacity, and ensuring equitable healthcare for all San Joaquin County residents, regardless of socioeconomic status, geography, or language.

#### Expanding Service Availability and Digital Access

The organization has significantly expanded its physical footprint to offer timely, coordinated care close to home. This includes multiple primary care clinics, an urgent care center, and a growing network of specialty practices (e.g., cardiology, neurology, orthopedics). The 24/7 Emergency Department is staffed with on-site specialists. Simultaneously, digital access is growing via expanded telehealth options for virtual primary, specialty, and chronic care visits, which reduce travel burdens and wait times. Patient portals facilitate online scheduling, secure messaging, and real-time result access, empowering patients in their care.

#### Removing Financial, Cultural, and Logistical Barriers

Access initiatives move beyond physical proximity to address affordability, transportation, and health literacy.

- **Financial Assistance:** The hospital ensures no patient is denied medically necessary care based on ability to pay through financial assistance and community benefit programs. Staff assist with insurance enrollment (Medi-Cal) and provide sliding-scale payment options. Annual reports show substantial investment in uncompensated care and preventive programs.
- **Logistical Support:** Case management and social work teams assist with financial counseling and navigating care programs. Partnerships with transit providers and volunteer driver programs provide crucial transportation support, which directly reduces no-show rates.
- **Cultural Competency:** To serve vulnerable populations, particularly within Hispanic and rural communities, the organization provides bilingual staff and certified interpreters, ensuring information is delivered safely in the patient's preferred language.

#### Integrated and Community-Based Outreach

The organization has developed strategies to reach patients in their communities and address the connection between physical and mental health.

- **Mobile Outreach:** Mobile and pop-up clinics, a core outreach strategy, deliver vaccinations, screenings, and preventive services directly to underserved neighborhoods, including rural areas and farmworker communities, thereby reducing disparities.
- **Integrated Behavioral Health:** Behavioral health support is integrated across emergency, inpatient, and primary care settings. The Substance Use Navigator (SUN) program connects patients with necessary treatment, counseling, and recovery resources, increasing access for those who might otherwise forgo care due to stigma.
- **Partnerships:** Adventist Health Lodi Memorial leads in the Healthier San Joaquin Collaborative, aligning with public health agencies and nonprofits to expand care access countywide.

Collaboration with community groups and faith organizations strengthens outreach to uninsured and underinsured populations, bridging critical access gaps.

#### Performance Measurement and Quality Improvement

Performance in Access to Care is continuously monitored through indicators like appointment availability, patient wait times, payer mix, and community utilization rates. Strategies are refined based on patient feedback and findings from the Community Health Needs Assessment (CHNA). Measurable success includes improvements in insured rates, reduced emergency department diversion, and increased telehealth usage, demonstrating a sustained commitment to improving health outcomes and advancing health equity across the county.

## Methodology Guidelines

Did the hospital follow the methodology in the Measures Submission Guide? (Y/N)

Y
