

Hospital Equity Measures Report

General Information

Report Type:	Hospital Equity Measures Report
Year:	2024
Hospital Name:	ADVENTIST HEALTH DELANO
Facility Type:	General Acute Care Hospital
Hospital HCAI ID:	106150706
Report Period:	01/01/2024 - 12/31/2024
Status:	Complete
Due Date:	11/29/2025
Last Updated:	03/03/2026
Hospital Location with Clean Water and Air:	N
Hospital Web Address for Equity Report:	https://www.adventisthealth.org/about-us/health-equity

Overview

Assembly Bill No. 1204 requires the Department of Health Care Access and Information (HCAI) to develop and administer a Hospital Equity Measures Reporting Program to collect and post summaries of key hospital performance and patient outcome data regarding sociodemographic information, including but not limited to age, sex, race/ethnicity, payor type, language, disability status, and sexual orientation and gender identity.

Hospitals (general acute, children's, and acute psychiatric) and hospital systems are required to annually submit their reports to HCAI. These reports contain summaries of each measure, the top 10 disparities, and the equity plans to address the identified disparities. HCAI is required to maintain a link on the HCAI website that provides access to the content of hospital equity measures reports and equity plans to the public. All submitted hospitals are required to post their reports on their websites, as well.

Laws and Regulations

For more information on Assembly Bill No. 1204, please visit the following link by copying and pasting the URL into your web browser:
https://leginfo.legislature.ca.gov/faces/billTextClient.xhtml?bill_id=202120220AB1204

Hospital Equity Measures

Joint Commission Accreditation

General acute care hospitals are required to report three structural measures based on the Commission Accreditation's Health Care Disparities Reduction and Patient-Centered Communication Accreditation Standards. For more information on these measures, please visit the following link by copying and pasting the URL into your web browser:

The first two structural measures are scored as "yes" or "no"; the third structural measure comprises the percentages of patients by five categories of preferred languages spoken, in addition to one other/unknown language category.

Designate an individual to lead hospital health equity activities (Y = Yes, N = No).

Y

Provide documentation of policy prohibiting discrimination (Y = Yes, N = No).

Y

Number of patients that were asked their preferred language, five defined categories and one other/unknown languages category.

30719

Table 1. Summary of preferred languages reported by patients.

Languages	Number of patients who report preferring language	Total number of patients	Percentage of total patients who report preferring language (%)
English Language	19222	30719	62.6
Spanish Language	11321	30719	36.9
Asian Pacific Islander Languages	76	30719	0.2
Middle Eastern Languages	68	30719	0.2
American Sign Language	suppressed	30719	suppressed
Other Languages	suppressed	30719	suppressed

Centers for Medicare & Medicaid Services (CMS) Hospital Commitment to Health Equity Structural (HCHE) Measure

There are five domains that make up the CMS Hospital Commitment to HCHE measures. Each domain is scored as "yes" or "no." In order to score "yes," a general acute care hospital is required to confirm all the domain's attestations. Lack of one or more of the attestations results in a score of "no." For more information on the CMS Hospital Commitment to HCHE measures, please visit the following link by copying and pasting the URL into your web browser:

<https://data.cms.gov/provider-data/topics/hospitals/health-equity>

Centers for Medicare & Medicaid Services (CMS) Hospital Commitment to Health Equity Structural (HCHE) Measure Domain 1: Strategic Planning (Yes/No)

- Our hospital strategic plan identifies priority populations who currently experience health disparities.
- Our hospital strategic plan identifies healthcare equity goals and discrete action steps to achieve these goals.
- Our hospital strategic plan outlines specific resources that have been dedicated to achieving our equity goals.
- Our hospital strategic plan describes our approach for engaging key stakeholders, such as community-based organizations.

Y

CMS HCHE Measure Domain 2: Data Collection (Yes/No)

- Our hospital strategic plan identifies healthcare equity goals and discrete action steps to achieve these goals.
- Our hospital has training for staff in culturally sensitive collection of demographics and/or social determinant of health information.
- Our hospital inputs demographic and/or social determinant of health information collected from patients into structured, interoperable data elements using a certified electronic health record (EHR) technology.

Y

CMS HCHE Measure Domain 3: Data Analysis (Yes/No)

- Our hospital stratifies key performance indicators by demographic and/or social determinants of health variables to identify equity gaps and includes this information in hospital performance dashboards.

Y

CMS HCHE Measure Domain 4: Quality Improvement (Yes/No)

- Our hospital participates in local, regional or national quality improvement activities focused on reducing health disparities.

Y

CMS HCHE Measure Domain 5: Leadership Engagement (Yes/No)

- Our hospital senior leadership, including chief executives and the entire hospital board of trustees, annually reviews our strategic plan for achieving health equity.
- Our hospital senior leadership, including chief executives and the entire hospital board of trustees, annually review key performance indicators stratified by demographic and/or social factors.

Y

Centers for Medicare & Medicaid Services (CMS) Social Drivers of Health (SDOH)

General acute care hospitals are required to report on rates of screenings and intervention rates among patients above 18 years old for five health related social needs (HRSN), which are food insecurity, housing instability, transportation problems, utility difficulties, and interpersonal safety. These rates are reported separately as being screened as positive for any of the five HRSNs, positive for each individual HRSN, and the intervention rate for each positively screened HRSN. For more information on the CMS SDOH, please visit the following link by copying and pasting the URL into your web browser:

<https://www.cms.gov/priorities/innovation/key-concepts/social-drivers-health-and-health-related-social-needs>

Number of patients admitted to an inpatient hospital stay who are 18 years or older on the date of admission and are screened for all of the five HRSN

1165

Total number of patients who are admitted to a hospital inpatient stay and who are 18 years or older on the date of admission

1352

Rate of patients admitted for an inpatient hospital stay who are 18 years or older on the date of admission, were screened for an HRSN, and who screened positive for one or more of the HRSNs

86.2

Table 2. Positive screening rates and intervention rates for the five Health Related Social Needs of the Centers of Medicare & Medicaid Services (CMS) Social Drivers of Health (SDOH).

Social Driver of Health	Number of positive screenings	Rate of positive screenings (%)	Number of positive screenings who received intervention	Rate of positive screenings who received intervention (%)
Food Insecurity	63	5.4	0	
Housing Instability	47	4.0	0	
Transportation Problems	34	2.9	0	
Utility Difficulties	14	1.2	0	
Interpersonal Safety	0	0	0	

Core Quality Measures for General Acute Care Hospitals

There are two quality measures from the Hospital Consumer Assessment of Healthcare Providers and Systems (HCAHPS) survey. For more information on the HCAHPS survey, please visit the following link by copying and pasting the URL into your web browser:

<https://hcahpsonline.org/en/survey-instruments/>

Patient Recommends Hospital

The first HCAHPS quality measure is the percentage of patients who would recommend the hospital to friends and family. For this measure, general acute care hospitals provide the percentage of patient respondents who responded "probably yes" or "definitely yes" to whether they would recommend the hospital, the percentage of the people who responded to the survey (i.e., the response rate), and the inputs for the percentages. The percentages and inputs are stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding HCAHPS question number is 19.

Number of respondents who replied "probably yes" or "definitely yes" to HCAHPS Question 19, "Would you recommend this hospital to your friends and family?"

105

Total number of respondents to HCAHPS Question 19

123

Percentage of total respondents who responded "probably yes" or "definitely yes" to HCAHPS Question 19

85.4

Total number of people surveyed on HCAHPS Question 19

1538

Response rate, or the percentage of people who responded to HCAHPS Question 19

8.0

Table 3. Patient recommends hospital by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

Race and/or Ethnicity	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
American Indian or Alaska Native					
Asian					
Black or African American					
Hispanic or Latino					
Middle Eastern or North African					
Multiracial and/or Multiethnic (two or more races)					
Native Hawaiian or Pacific Islander					
White					

Age	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Age < 18					
Age 18 to 34					
Age 35 to 49					
Age 50 to 64					
Age 65 Years and Older					

Sex assigned at birth	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Female					
Male					
Unknown					

Payer Type	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Medicare					
Medicaid					
Private					
Self-Pay					
Other					

Preferred Language	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
English Language

Male					
Male-to-female (MTF)/ transgender female/trans woman					
Non-conforming gender					
Additional gender category or other					
Not disclosed					

Patient Received Information in Writing

The second HCAHPS quality measure is the percentage of patients who reported receiving information in writing on symptoms and health problems to look out for after leaving the hospital. General acute care hospitals are required to provide the percentage of patient respondents who responded "yes" to being provided written information, the percentage of the people who responded to the survey (i.e., the response rate), and the inputs for these percentages. These percentages and inputs are stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding HCAHPS question number is 17.

Number of respondents who replied "yes" to HCAHPS Question 17, "During this hospital stay, did you get information in writing about what symptoms or health problems to look out for after you left the

hospital?"

106
Total number of respondents to HCAHPS Question 17
123

Percentage of respondents who responded "yes" to HCAHPS Question 17
86.2

Total number of people surveyed on HCAHPS Question 17
1538

Response rate, or the percentage of people who responded to HCAHPS Question 17
8.0

Table 4. Patient reports receiving information in writing about symptoms or health problems by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

Agency for Healthcare Research and Quality (AHRQ) Indicators

General acute care hospitals are required to report on two indicators from the Agency for Healthcare Research and Quality (AHRQ). For general information about AHRQ indicators, please visit the following link by copying and pasting the URL into your web browser:

<https://qualityindicators.ahrq.gov/>

Pneumonia Mortality Rate

The Pneumonia Mortality Rate is defined as the rate of in-hospital deaths per 1,000 hospital discharges with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission for patients ages 18 years and older. General acute care hospitals report the Pneumonia Mortality Rate by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding AHRQ Inpatient Quality Indicator is 20. For more information about this indicator, please visit the following link by copying and pasting the URL into your web browser:

https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_20_Pneumonia_Mortality_Rate.pdf

Death Rate among Surgical Inpatients with Serious Treatable Complications

The Death Rate among Surgical Inpatients with Serious Treatable Complications is defined as the rate of in-hospital deaths per 1,000 surgical discharges among patients ages 18-89 years old or obstetric patients with serious treatable complications. General acute care hospitals report this measure by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding AHRQ Patient Safety Indicator is 04. For more information about this indicator, please visit the following link by copying and pasting the URL into your web browser:

California Maternal Quality Care Collaborative (CMQCC) Core Quality Measures

There are three core quality maternal measures adopted from the California Maternal Quality Care Collaborative (CMQCC).

CMQCC Nulliparous, Term, Singleton, Vertex (NTSV) Cesarean Birth Rate

The CMQCC Nulliparous, Term, Singleton, Vertex (NTSV) Cesarean Birth Rate is defined as nulliparous women with a term (at least 37 weeks gestation), singleton baby in a vertex position delivered by cesarian birth. General acute care hospitals report the NTSV Cesarean Birth Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. For more information, please visit the following link by copying and pasting the URL into your web browser:

CMQCC Vaginal Birth After Cesarean (VBAC) Rate

The CMQCC Vaginal Birth After Cesarean (VBAC) Rate is defined as vaginal births per 1,000 deliveries by patients with previous Cesarean deliveries. General acute care hospitals report the VBAC Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The VBAC Rate uses the specifications of AHRQ Inpatient Quality Indicator 22. For more information, please visit the following link by copying and pasting the URL into your web browser:

[https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_22_Vaginal_Birth_After_Cesarean_\(VBAC\)_Delivery_Rate_Uncomplicated.pdf](https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_22_Vaginal_Birth_After_Cesarean_(VBAC)_Delivery_Rate_Uncomplicated.pdf)

CMQCC Exclusive Breast Milk Feeding Rate

The CMQCC Exclusive Breast Milk Feeding Rate is defined as the newborns per 100 who reached at least 37 weeks of gestation (or 3000g if gestational age is missing) who received breast milk

exclusively during their stay at the hospital. Other criteria are that the newborns did not go to the neonatal intensive care unit (NICU), transfer, or die, did not reflect multiple gestation, and did not have codes for parenteral nutrition or galactosemia. General acute care hospitals report the Exclusive Breast Milk Feeding Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The CMQCC Exclusive Breast Milk Feeding Rate uses the Joint Commission National Quality Measure PC-05. For more information, please visit the following link by copying and pasting the URL into your web browser:
<https://manual.jointcommission.org/releases/TJC2024B/MIF0170.html>

Number of newborn cases that were exclusively fed breast milk during their hospital stay and meet the inclusion and exclusion criteria

46

Total number of newborn cases born in the hospital that meet the inclusion and exclusion criteria

126

Rate of newborn cases per 100 that were exclusively fed breast milk during their hospital stay and meet the inclusion and exclusion criteria

HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate

General acute care hospitals are required to report several HCAI All-Cause Unplanned 30-Day Hospital Readmission Rates, which are broadly defined as the percentage of hospital-level, unplanned, all-cause readmissions after admission for eligible conditions within 30 days of hospital discharge for patients aged 18 years and older. These rates are first stratified based on any eligible condition, mental health disorders, substance use disorders, co-occurring disorders, and no behavioral health diagnosis. Then, each condition-stratified hospital readmission rate is further stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. For more information on the HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate, please visit the following link by copying and pasting the URL into your web browser:

https://hcai.ca.gov/wp-content/uploads/2024/10/HCAI-All-Cause-Readmission-Rate-Exclusions_ADA.pdf

HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate – Any Eligible Condition

Number of inpatient hospital admissions which occurs within 30 days of the discharge date of an eligible index admission and were 18 years or older at time of admission

124

Total number of patients who were admitted to the general acute care hospital and were 18 years or older at time of admission

1211

Rate of hospital-level, unplanned, all-cause readmissions after admission for any eligible condition

within 30 days of hospital discharge for patients aged 18 and older

Health Equity Plan

All general acute care hospitals report a health equity plan that identifies the top 10 disparities and a written plan to address them.

Top 10 Disparities

Disparities for each hospital equity measure are identified by comparing the rate ratios by stratification groups. Rate ratios are calculated differently for measures with preferred low rates and those with preferred high rates. Rate ratios are calculated after applying the California Health and Human Services Agency's "Data De-Identification Guidelines (DDG)," dated September 23, 2016.

Table 15. Top 10 disparities and their rate ratio values.

Measures	Stratifications	Stratification Group	Stratification Rate	Reference Group	Reference Rate	Rate Ratio
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Age (excluding maternal measures)	65 and older	17.5	18 to 34	2.5	6.9
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Age (excluding maternal measures)	50 to 64	16.4	18 to 34	2.5	6.5
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Age (excluding maternal measures)	35 to 49	10.8	18 to 34	2.5	4.3
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Expected Payor	Medicare	20.3	Medicaid	6.4	3.2
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Race and/or Ethnicity	White	15.4	Hispanic or Latino	9.2	1.7

Plan to address disparities identified in the data

Disparity and Population Impact 1-5: Age Group: 65 and older: The age group of 65 and older has a disparity rate of 17.5% in comparison to the reference age range of 18-34 of a 2.5% for All Cause 30 Day Unplanned Readmissions, creating a return ratio of 6.9. Age Group: 50-64: The age range of 50-64 has a disparity rate of 16.4% in comparison to the reference age range of 18-34 of a 2.5% for All Cause 30 Day Unplanned Readmissions, creating a return ratio of 6.5. Age Group 35 to 49: The age range of 35-49 has a disparity rate of 10.8% in comparison to the reference range of 18-34 of a 2.5% for All Cause 30 Day Unplanned Readmissions, creating a return ratio of 4.3. Expected Payor: Medicare: The Medicare patient population as a disparity rate of 20.3% in comparison to the reference range of Medicaid with 6.4% for All Cause 30 Day Unplanned Readmissions, creating a return ratio of 3.2. Race and Ethnicity: White: The race and ethnicity population, White, has a disparity rate of 15.4% in comparison to the reference range for Hispanic or Latino of 9.2% for All Cause 30 Day Unplanned Readmissions, creating a return ratio of 1.7. Analysis: The age range of 65 and older have the highest disparity for 30 Day Unplanned Readmissions with further analysis showing that the male patient population makes up 20.5%, race and ethnicity populations from Black or African American 27.3%, White 21.3% and Hispanic or Latino 17.6%, language disparities for Asian/ Pacific Islander 33% and Spanish 17.7%, and lastly a higher rate for mental health disorders 27% in comparison to the 15.1% statewide average. The age range of 50-64 have a high disparity for 30 Day Unplanned Readmissions with further analysis within that age grouping showing that females 18% have a higher return rates than patients with Medi-Cal 19.2%, and lastly patient populations with mental health disorders 37.5% and substance use disorders 35.7% have a higher return rates in comparison to the statewide average of 15.1%. The age range of 35 to 49 have a high disparity for 30 Day Unplanned Readmissions with further analysis within that age group, revealing the male population 23.5% has a significant return rate in comparison the females 3.5%, Medicare payer 57.1%, English speakers 13.3%, and substance use disorders 26.1% within that age range in comparison to the statewide average of 15.1%. The Medicare patient population has a high disparity for 30 Day Unplanned Readmissions with analysis in into that population group identifying further disparity for the age range 35 to 49 57.1%, male patients 24.6%, Medicare payor 20/3%, race and ethnicity populations of Asian/ Pacific Islander 28.6%, English 22%, and Spanish 17%, and lastly mental health 29.5% and substance use disorders 33.3% within the Medicare payor population in comparison to the 15.1% statewide average. The race and ethnicity White population have a high disparity for the 30 Day Unplanned Readmissions with further analysis of the identified group, has further disparity related to the age population 65 and older 21.3%, Medicare payer 21.4%, and

mental health disorders 32% in comparison to the 15.1% statewide average. Action Plans: Risk stratification by disparity shared with the multidisciplinary committees to help target the specific identified disparities within the readmission reduction performance improvement work. Discharge planning to include SDOH screening review and provide interventions to help address the health equity barriers identified to the individual patient. Rounding prior to patient discharge by the care management team to confirm communication preference prior to disposition for the care transition team needs. Follow up appointments made prior to discharge for all high-risk readmission patients within the provider recommended time frame. Meds to Beds program exploration and development to address access barriers for high-risk readmission patients. Medication delivery options shared as part of the discharge planning that deliver to surrounding communities. Follow up calls to help assist with care coordination post disposition are made within 48hrs of discharge for all high-risk readmission patients. Objectives: Reduce All-Cause Unplanned 30-Day Hospital Readmission Disparity Rate for age group 65 and older by 1% within 24 months. Reduce All-Cause Unplanned 30-Day Hospital Readmission Disparity Rate for age group 50-64 by 1% within 24 months. Reduce All-Cause Unplanned 30-Day Hospital Readmission Disparity Rate for age group 35-49 by 1% within 24 months. Reduce All-Cause Unplanned 30-Day Hospital Readmission Disparity Rate for payer of Medicare by 1% within 24 months. Reduce All-Cause Unplanned 30-Day Hospital Readmission Disparity Rate for race/ethnicity White by 1% within 24 months. Timeframe: All action plans are to begin by January 2026 with a multidisciplinary committee leading and tracking improvement through the duration of the action plan.

Performance in the priority area

General acute care hospitals are required to provide hospital equity plans that address the top 10 disparities by identifying population impact and providing measurable objectives and specific timeframes. For each disparity, hospital equity plans will address performance across priority areas: person-centered care, patient safety, addressing patient social drivers of health, effective treatment, care coordination, and access to care.

Person-centered care

Adventist Health Delano recognizes the great importance of patient-centered care and incorporates the individual's goals, concerns, values and right for self-determination within the care planning process. The key performance activities in place to incorporate patient centered care are as follows.

- Collection of social determinants of health data starts at the beginning of a person's hospitalization visit and is incorporated within the patient data profile capture.
- Captured social determinate of health data is reviewed by the discharge planning care management team as part of their discharge planning assessment early in the patient stay. Any needs identified, are given resources to address the patient's specific barriers.
- Multidisciplinary care rounds occur daily at the patient bedside with the care team including, but not limited to, attending care provider, nurses, care management, pharmacy, rehabilitation services, nutrition, wound care, palliative care, and respiratory therapy. This comprehensive team rounding together with the patient allows for open dialogue between the care team and patient for goals for the daily hospital care while also planning for patients needs when transitioning to their post hospital setting.
- Personalized care planning and discharge planning is tailored to the patient's physical, emotional and wellbeing health needs respecting the patient's cultural, spiritual and personal preferences.
- Various language interpreter, translation and American Sign Language video services are utilized for communication with the patient based on the identified preferred language assessed from the

start of the patient visit. This service reduces any barrier to communication with the patient regarding their care, treatment, and instruction.

- Spiritual support services are provided on-site as well as on-call to meet the individual spiritual and emotional needs of the person including all faith and backgrounds.
- The online Patient Portal is available to the patient during and after their stay allowing for secure access to test results, visit summaries and other records.
- Patient education preferences are assessed and taken into account with delivery of instruction. The care team utilizes multimodal education including, but not limited to, handouts, verbal, teach-back and digital to best meet the patient's individual needs.
- The patient experience is a priority to the various service lines within the hospital setting. Patient Experience Surveys are sent, collected, analyzed and shared for continued performance improvement activities to improve patient care.

Patient safety

As an organization, Adventist Health Delano consistently strives to achieve high reliability through application of just culture for accountability, implementation of culture of safety, and use of data systems for improved standardization. Safety events are analyzed for improvement opportunities and standardization of process, assessments, and interventions are developed with evidenced based practice with the goal to minimize risk, prevent errors and provide quality of care.

- Harm reduction strategies are a part of the organization systems and processes, and each occurrence is thoroughly reviewed and addressed with the goal to prevent recurrence, including but not limited to, Patient Safety Indicators, Hospital Associated Conditions, medication safety, infection prevention, environment of care, mortality, readmission, and sepsis.
- Organizational quality improvement program is integrated through the hospital services and departments with quality and safety a priority of focus.

Addressing patient social drivers of health

Adventist Health Delano assessed patient's social needs with the disposition planning beginning on arrival to the organization. The data is collected and utilized in the care planning process with early assessment of the patient's potential barriers to care and social determinants of health.

Interventions are then applied to help reduce the social barriers to their health and wellbeing with their care transition. The organization has sustained a high assessment participation rate that exceeds the 2024 year target.

- Screening of health-related social needs include, food insecurity, housing instability, transportation, utilities and safety concerns. These screenings are utilized in the discharge care planning process and appropriate resources given to assist with the patient need.
- Cal-Aim is a program that is utilized, funded by the California Department of Health Care Services that assigns a community health worker to the individual therefore given assistance to address barriers to care including but not limited to, access to medications, delivery of medications, transportation to and from appointments, ongoing contact for health care needs, assistance with food programs, financial assistance programs, educational programs, dependent care programs and many more services. The goal is to graduate the individual once the barriers to their social determinants of health care needs are met and sustained.
- Grants for Narcan program that allows free access to lifesaving substance abuse lifesaving agents.
- Substance Use grant from Kern County the goal of having another resource to see patients with substance abuse needs included but not limited to, in person visits, follow up calls, rehabilitation needs, and community programs for recovery.
- Transition of care visits are arranged with the clinics when patients do not have a primary care provider set up to help address their immediate post discharge care needs and establish care with a provider.

- Resources are provided based on a person's social determinants to their health including but not limited to, local and state financial programs in the area, charity care for any healthcare billing support for those who qualify, transportation, church vouchers for hotels, local food banks, meals on wheels, community rehabilitation and recovery services, senior center referrals, durable medical equipment needs, and indigent resource packets. A local community garden is maintained by the hospital as a source for healthy whole foods to support wellness. Any safety or security needs are thoroughly assessed with targeted interventions to help support the individual.
- For the maternal care center they assess for safe sleep resources available in the home setting and provide cribs and halo sack at discharge. To help address the gap in local support for prenatal care the hospital provides prenatal classes and resources for infant feeding.

Performance in the priority area continued

Performance across all of the following priority areas.

Effective treatment

Adventist Health Delano delivers timely and effective evidenced based care. In recognition of the community access to health challenges, Adventist Health Delano has many health services, thus bringing specialty care to an underserved population.

- The emergency department and maternal care center is consistently meeting the care needs presented in a timely and effective manner as evidenced by their turn around times meeting and exceeding national benchmarks.
