

Hospital Equity Measures Report

General Information

Report Type:	Hospital Equity Measures Report
Year:	2024
Hospital Name:	ADVENTIST HEALTH HOWARD MEMORIAL
Facility Type:	General Acute Care Hospital
Hospital HCAI ID:	106234038
Report Period:	1/1/2024 - 12/31/2024
Status:	Complete
Due Date:	11/29/2025
Last Updated:	02/23/2026
Hospital Location with Clean Water and Air:	Y
Hospital Web Address for Equity Report:	https://www.adventisthealth.org/about-us/community-benefit/

Overview

Assembly Bill No. 1204 requires the Department of Health Care Access and Information (HCAI) to develop and administer a Hospital Equity Measures Reporting Program to collect and post summaries of key hospital performance and patient outcome data regarding sociodemographic information, including but not limited to age, sex, race/ethnicity, payor type, language, disability status, and sexual orientation and gender identity.

Hospitals (general acute, children's, and acute psychiatric) and hospital systems are required to annually submit their reports to HCAI. These reports contain summaries of each measure, the top 10 disparities, and the equity plans to address the identified disparities. HCAI is required to maintain a link on the HCAI website that provides access to the content of hospital equity measures reports and equity plans to the public. All submitted hospitals are required to post their reports on their websites, as well.

Laws and Regulations

For more information on Assembly Bill No. 1204, please visit the following link by copying and pasting the URL into your web browser:
https://leginfo.legislature.ca.gov/faces/billTextClient.xhtml?bill_id=202120220AB1204

Hospital Equity Measures

Joint Commission Accreditation

General acute care hospitals are required to report three structural measures based on the Commission Accreditation's Health Care Disparities Reduction and Patient-Centered Communication Accreditation Standards. For more information on these measures, please visit the following link by copying and pasting the URL into your web browser:

The first two structural measures are scored as "yes" or "no"; the third structural measure comprises the percentages of patients by five categories of preferred languages spoken, in addition to one other/unknown language category.

Designate an individual to lead hospital health equity activities (Y = Yes, N = No).

Y

Provide documentation of policy prohibiting discrimination (Y = Yes, N = No).

Y

Number of patients that were asked their preferred language, five defined categories and one other/unknown languages category.

17121

Table 1. Summary of preferred languages reported by patients.

Languages	Number of patients who report preferring language	Total number of patients	Percentage of total patients who report preferring language (%)
English Language	15858	17121	92.6
Spanish Language	1240	17121	7.2
Asian Pacific Islander Languages	suppressed	17121	suppressed
Middle Eastern Languages	suppressed	17121	suppressed
American Sign Language		17121	
Other Languages	suppressed	17121	suppressed

Centers for Medicare & Medicaid Services (CMS) Hospital Commitment to Health Equity Structural (HCHE) Measure

There are five domains that make up the CMS Hospital Commitment to HCHE measures. Each domain is scored as "yes" or "no." In order to score "yes," a general acute care hospital is required to confirm all the domain's attestations. Lack of one or more of the attestations results in a score of "no." For more information on the CMS Hospital Commitment to HCHE measures, please visit the following link by copying and pasting the URL into your web browser:

<https://data.cms.gov/provider-data/topics/hospitals/health-equity>

Centers for Medicare & Medicaid Services (CMS) Hospital Commitment to Health Equity Structural (HCHE) Measure Domain 1: Strategic Planning (Yes/No)

- Our hospital strategic plan identifies priority populations who currently experience health disparities.
- Our hospital strategic plan identifies healthcare equity goals and discrete action steps to achieve these goals.
- Our hospital strategic plan outlines specific resources that have been dedicated to achieving our equity goals.
- Our hospital strategic plan describes our approach for engaging key stakeholders, such as community-based organizations.

Y

CMS HCHE Measure Domain 2: Data Collection (Yes/No)

- Our hospital strategic plan identifies healthcare equity goals and discrete action steps to achieve these goals.
- Our hospital has training for staff in culturally sensitive collection of demographics and/or social determinant of health information.
- Our hospital inputs demographic and/or social determinant of health information collected from patients into structured, interoperable data elements using a certified electronic health record (EHR) technology.

Y

CMS HCHE Measure Domain 3: Data Analysis (Yes/No)

- Our hospital stratifies key performance indicators by demographic and/or social determinants of health variables to identify equity gaps and includes this information in hospital performance dashboards.

Y

CMS HCHE Measure Domain 4: Quality Improvement (Yes/No)

- Our hospital participates in local, regional or national quality improvement activities focused on reducing health disparities.

Y

CMS HCHE Measure Domain 5: Leadership Engagement (Yes/No)

- Our hospital senior leadership, including chief executives and the entire hospital board of trustees, annually reviews our strategic plan for achieving health equity.
- Our hospital senior leadership, including chief executives and the entire hospital board of trustees, annually review key performance indicators stratified by demographic and/or social factors.

Y

Centers for Medicare & Medicaid Services (CMS) Social Drivers of Health (SDOH)

General acute care hospitals are required to report on rates of screenings and intervention rates among patients above 18 years old for five health related social needs (HRSN), which are food insecurity, housing instability, transportation problems, utility difficulties, and interpersonal safety. These rates are reported separately as being screened as positive for any of the five HRSNs, positive for each individual HRSN, and the intervention rate for each positively screened HRSN. For more information on the CMS SDOH, please visit the following link by copying and pasting the URL into your web browser:

<https://www.cms.gov/priorities/innovation/key-concepts/social-drivers-health-and-health-related-social-needs>

Number of patients admitted to an inpatient hospital stay who are 18 years or older on the date of admission and are screened for all of the five HRSN

625

Total number of patients who are admitted to a hospital inpatient stay and who are 18 years or older on the date of admission

693

Rate of patients admitted for an inpatient hospital stay who are 18 years or older on the date of admission, were screened for an HRSN, and who screened positive for one or more of the HRSNs

90.2

Table 2. Positive screening rates and intervention rates for the five Health Related Social Needs of the Centers of Medicare & Medicaid Services (CMS) Social Drivers of Health (SDOH).

Social Driver of Health	Number of positive screenings	Rate of positive screenings (%)	Number of positive screenings who received intervention	Rate of positive screenings who received intervention (%)
Food Insecurity	72	11.5	0	
Housing Instability	56	9.0	0	
Transportation Problems	63	10.1	0	
Utility Difficulties	23	3.7	0	
Interpersonal Safety	suppressed	suppressed	0	

Core Quality Measures for General Acute Care Hospitals

There are two quality measures from the Hospital Consumer Assessment of Healthcare Providers and Systems (HCAHPS) survey. For more information on the HCAHPS survey, please visit the following link by copying and pasting the URL into your web browser:

<https://hcahpsonline.org/en/survey-instruments/>

Patient Recommends Hospital

The first HCAHPS quality measure is the percentage of patients who would recommend the hospital to friends and family. For this measure, general acute care hospitals provide the percentage of patient respondents who responded "probably yes" or "definitely yes" to whether they would recommend the hospital, the percentage of the people who responded to the survey (i.e., the response rate), and the inputs for the percentages. The percentages and inputs are stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding HCAHPS question number is 19.

Number of respondents who replied "probably yes" or "definitely yes" to HCAHPS Question 19, "Would you recommend this hospital to your friends and family?"

275

Total number of respondents to HCAHPS Question 19

283

Percentage of total respondents who responded "probably yes" or "definitely yes" to HCAHPS Question 19

97.2

Total number of people surveyed on HCAHPS Question 19

976

Response rate, or the percentage of people who responded to HCAHPS Question 19

29

Table 3. Patient recommends hospital by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

Race and/or Ethnicity	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
American Indian or Alaska Native					
Asian					
Black or African American					
Hispanic or Latino					
Middle Eastern or North African					
Multiracial and/or Multiethnic (two or more races)					
Native Hawaiian or Pacific Islander					
White					

Age	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Age < 18					
Age 18 to 34					
Age 35 to 49					
Age 50 to 64					
Age 65 Years and Older					

Sex assigned at birth	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Female					
Male					
Unknown					

Payer Type	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Medicare					
Medicaid					
Private					
Self-Pay					
Other					

Preferred Language	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
English Language					
Spanish Language

Female-to-male (FTM)/ transgender male/trans man					
Male					
Male-to-female (MTF)/ transgender female/trans woman					
Non-conforming gender					
Additional gender category or other					
Not disclosed					

Patient Received Information in Writing

The second HCAHPS quality measure is the percentage of patients who reported receiving information in writing on symptoms and health problems to look out for after leaving the hospital. General acute care hospitals are required to provide the percentage of patient respondents who responded "yes" to being provided written information, the percentage of the people who responded to the survey (i.e., the response rate), and the inputs for these percentages. These percentages and inputs are stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding HCAHPS question number is 17.

Number of respondents who replied "yes" to HCAHPS Question 17, "During this hospital stay, did you get information in writing about what symptoms or health problems to look out for after you left the

hospital?"

252
Total number of respondents to HCAHPS Question 17
283

Percentage of respondents who responded "yes" to HCAHPS Question 17
89

Total number of people surveyed on HCAHPS Question 17
976

Response rate, or the percentage of people who responded to HCAHPS Question 17
29

Table 4. Patient reports receiving information in writing about symptoms or health problems by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

Race and/or Ethnicity	Number of "yes" responses	Total number of responses	Percentage of "yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)

Agency for Healthcare Research and Quality (AHRQ) Indicators

General acute care hospitals are required to report on two indicators from the Agency for Healthcare Research and Quality (AHRQ). For general information about AHRQ indicators, please visit the following link by copying and pasting the URL into your web browser:

<https://qualityindicators.ahrq.gov/>

Pneumonia Mortality Rate

The Pneumonia Mortality Rate is defined as the rate of in-hospital deaths per 1,000 hospital discharges with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission for patients ages 18 years and older. General acute care hospitals report the Pneumonia Mortality Rate by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding AHRQ Inpatient Quality Indicator is 20. For more information about this indicator, please visit the following link by copying and pasting the URL into your web browser:

https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_20_Pneumonia_Mortality_Rate.pdf

Number of in-hospital deaths with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission

0

Total number of hospital discharges with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission

65

Rate of in-hospital deaths per 1,000 hospital discharges with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission

0

Death Rate among Surgical Inpatients with Serious Treatable Complications

The Death Rate among Surgical Inpatients with Serious Treatable Complications is defined as the rate of in-hospital deaths per 1,000 surgical discharges among patients ages 18-89 years old or obstetric patients with serious treatable complications. General acute care hospitals report this measure by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding AHRQ Patient Safety Indicator is 04. For more information about this indicator, please visit the following link by copying and pasting the URL into your web browser:
https://qualityindicators.ahrq.gov/Downloads/Modules/PSI/V2023/TechSpecs/PSI_04_Death_Rate_among_Surgical_Inpatients_with_Serious_Treatable_Complications.pdf

California Maternal Quality Care Collaborative (CMQCC) Core Quality Measures

There are three core quality maternal measures adopted from the California Maternal Quality Care Collaborative (CMQCC).

CMQCC Nulliparous, Term, Singleton, Vertex (NTSV) Cesarean Birth Rate

The CMQCC Nulliparous, Term, Singleton, Vertex (NTSV) Cesarean Birth Rate is defined as nulliparous women with a term (at least 37 weeks gestation), singleton baby in a vertex position delivered by cesarian birth. General acute care hospitals report the NTSV Cesarean Birth Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. For more information, please visit the following link by copying and pasting the URL into your web browser:

<https://www.cmqcc.org/quality-improvement-toolkits/supporting-vaginal-birth/ntsv-cesarean-birth-measure-specifications>

CMQCC Vaginal Birth After Cesarean (VBAC) Rate

The CMQCC Vaginal Birth After Cesarean (VBAC) Rate is defined as vaginal births per 1,000 deliveries by patients with previous Cesarean deliveries. General acute care hospitals report the VBAC Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The VBAC Rate uses the specifications of AHRQ Inpatient Quality Indicator 22. For more information, please visit the following link by copying and pasting the URL into your web browser:

[https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_22_Vaginal_Birth_After_Cesarean_\(VBAC\)_Delivery_Rate_Uncomplicated.pdf](https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_22_Vaginal_Birth_After_Cesarean_(VBAC)_Delivery_Rate_Uncomplicated.pdf)

CMQCC Exclusive Breast Milk Feeding Rate

The CMQCC Exclusive Breast Milk Feeding Rate is defined as the newborns per 100 who reached at least 37 weeks of gestation (or 3000g if gestational age is missing) who received breast milk

exclusively during their stay at the hospital. Other criteria are that the newborns did not go to the neonatal intensive care unit (NICU), transfer, or die, did not reflect multiple gestation, and did not have codes for parenteral nutrition or galactosemia. General acute care hospitals report the Exclusive Breast Milk Feeding Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The CMQCC Exclusive Breast Milk Feeding Rate uses the Joint Commission National Quality Measure PC-05. For more information, please visit the following link by copying and pasting the URL into your web browser: <https://manual.jointcommission.org/releases/TJC2024B/MIF0170.html>

Number of newborn cases that were exclusively fed breast milk during their hospital stay and meet the inclusion and exclusion criteria

NA

Total number of newborn cases born in the hospital that meet the inclusion and exclusion criteria

NA

Rate of newborn cases per 100 that were exclusively fed breast milk during their hospital stay and meet the inclusion and exclusion criteria

NA

HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate

General acute care hospitals are required to report several HCAI All-Cause Unplanned 30-Day Hospital Readmission Rates, which are broadly defined as the percentage of hospital-level, unplanned, all-cause readmissions after admission for eligible conditions within 30 days of hospital discharge for patients aged 18 years and older. These rates are first stratified based on any eligible condition, mental health disorders, substance use disorders, co-occurring disorders, and no behavioral health diagnosis. Then, each condition-stratified hospital readmission rate is further stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. For more information on the HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate, please visit the following link by copying and pasting the URL into your web browser:

https://hcai.ca.gov/wp-content/uploads/2024/10/HCAI-All-Cause-Readmission-Rate-Exclusions_ADA.pdf

HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate – Any Eligible Condition

Number of inpatient hospital admissions which occurs within 30 days of the discharge date of an eligible index admission and were 18 years or older at time of admission

95

Total number of patients who were admitted to the general acute care hospital and were 18 years or older at time of admission

886

Rate of hospital-level, unplanned, all-cause readmissions after admission for any eligible condition

within 30 days of hospital discharge for patients aged 18 and older

10.7

Health Equity Plan

All general acute care hospitals report a health equity plan that identifies the top 10 disparities and a written plan to address them.

Top 10 Disparities

Disparities for each hospital equity measure are identified by comparing the rate ratios by stratification groups. Rate ratios are calculated differently for measures with preferred low rates and those with preferred high rates. Rate ratios are calculated after applying the California Health and Human Services Agency's "Data De-Identification Guidelines (DDG)," dated September 23, 2016.

Table 15. Top 10 disparities and their rate ratio values.

Measures	Stratifications	Stratification Group	Stratification Rate	Reference Group	Reference Rate	Rate Ratio
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Expected Payor	Medicare	13.7	Private	7.7	1.8
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Age (excluding maternal measures)	65 and older	12.5	50 to 64	10.2	1.2

Plan to address disparities identified in the data

Adventist Health Howard Memorial Hospital reviewed the report and found only 2 disparities identified. Both disparity #1 & #2 are for readmission. Overall reduction in readmission has many components. Priority is given to Case Management when they round with Care Continuity every morning to review the patients who are at moderate and high risk for readmission. This risk for readmission is assessed on admission day #1 which includes use of an algorithm built into the electronic health record. Care Continuity then follows these patients post discharge to ensure timely follow up appointments are made that are customized to the patients' needs.

-Case Management is also handling referrals to outside support systems such as COMPASS team for Partnership Health, Cal Aim, Substance Use Navigator, Social work needs, etc. There is a multi-modality team that conducts daily rounds to include the patient and their family, pharmacist, provider, nurse, and case management in goals of care and needs for successful discharge. Each month there is an ongoing Readmission Committee that meets to conduct a deep dive into 100% of all readmissions to include barriers, trends, and opportunities. All post-surgical patients receive several phone calls from the orthopedic navigator RN to follow up on their progress.

Performance in the priority area

General acute care hospitals are required to provide hospital equity plans that address the top 10 disparities by identifying population impact and providing measurable objectives and specific timeframes. For each disparity, hospital equity plans will address performance across priority areas: person-centered care, patient safety, addressing patient social drivers of health, effective treatment, care coordination, and access to care.

Person-centered care

To prioritize Person-Centered Care our hospital screens 100% of all patients for language preference and we use qualified interpreters for 100% of non-English encounters. During education sessions with patients, we utilize "teach-back" method to confirm understanding.

In addition to language preference, we perform multi-disciplinary rounds bedside on 100% of patients daily to aid in individualized care planning and timely updates to the patient and their family.

The participation of our Patient Family Advisory Council and Patient Experience Committee help provide timely feedback for cultural preferences. We have received feedback regarding culturally accepted meals that would be accepted during their inpatient stay. This feedback prompted a quality subcommittee to perform a random survey to obtain feedback from various local cultures for food preferences. These preferences were taken into account to alter the food service menu. We hold unhindered visitation hours to encourage family presence and participation per the patient's wishes.

This hospital participates in Planetree recognition and programs to ensure we are holding high standards in patient-centered care.

We have an active Professional Governance comprised of frontline nurses. This committee reviews policies, initiates best-practice and acts on improvement opportunities relative to their specialty. This program supports nursing continuing education and participation in conferences/seminars for professional development and best practices.

Patient safety

Adventist Health Howard Memorial Hospital maintains priority of patient safety as a foundational component of high-quality care. Our performance records reflect consistent adherence to evidence-based practices with continued monitoring and engagement in performance improvement.

Key patient safety indicators include hospital-acquired infections, medications events, enhanced fall prevention, and use of clinical decision support systems aid in overall coordination of safe care. There have been ongoing low rates of hospital-acquired infections and increased compliance to CDC recommendations as evidenced by outcomes. Our last CLABSI was 12 years ago and our last CAUTI was 4 years ago.

Contributions to our hand-hygiene surveillance have contributed to this success. Between the providers and front-line staff, overall hand hygiene compliance last year was 86% for before and after patient interaction.

Early identification of increased falls has led to a multi-disciplinary approach to prevention. 100% of inpatient admissions are assessed for fall risk. There is equal representation of gender for those that do fall, but higher rates exist with the 70–83-year age range. This has led to appropriate educational techniques when it comes to education of the patient and family. At the beginning of each shift the shift supervisor uses a fall risk evaluation tool that assesses for "enhanced risk of fall". We created this program to ensure bedside charting is 100%, that there is always a resource staff member in close proximity to the patients' room, fall contract is signed, high fall risk wrist bands are applied. This program has shown a decrease in patient falls which has led to the program's scalability to the ICU as well.

Addressing patient social drivers of health

We screen all inpatients for social determinants of health and provide this data back to inpatient units. This information is then utilized to tailor education and resources for patients from our social workers, nursing, and care team.

The ability to screen patients in the electronic health record helps the care team identify underlying factors impacting health, leads to improved outcomes, and supports health equity. In 2024, the hospitals overall screening rate for inpatients was 89.5%. These results were utilized to identify the need for customized intervention for local vulnerable populations.

With food insecurity being the top disparity, we formed a multidisciplinary team to create a program called "Community Care". This program offered lists of local food resources for patients, healthy food recipes that could be tailored to specific health needs, vouchers for the hospital restaurant, vouchers for food at the hospitals 5-acre organic garden, and a backpack filled with shelf-stable food items for those who are unhoused.

The hospital has also started a sub-committee to customize the inpatient menu to address local cultural preferences and ensure options during their stay at the hospital.

There has been a lot of outreaches to local and state-wide programs, including the "Medically Tailored Meals" program for our patients that have diabetes, heart failure, and other medical needs. This program supports meal delivery to the patient once they are discharged out of the hospital.

Each meal is tailored to their health states by recommendations from an inpatient dietary consult. This meal delivery is guaranteed for 5 weeks with an optional renewal by the patient's provider.

Other ways we are addressing social determinants of health is by bridging gaps for local resources

such as Partnership Health, Compass team, Food bank, Homeless shelters, Senior bus, Meal-on-wheels to name a few.

Performance in the priority area continued

Performance across all of the following priority areas.

Effective treatment

Adventist Health Howard Memorial Hospital demonstrates high performance in effective treatment by focusing on high-quality, patient-centered care within the resources that come with serving rural populations.

- Priority areas include medication safety with a high rate of barcode medication administration (BCMA) throughout all patient care units. In addition to BCMA, we utilize a real-time electronic update system that works with our pumps. This allows for safety medication infusions that are within range and updated when needed real-time by pharmacy.

- Another area that receives daily focus is our fall prevention. All patients are assessed for risk of fall in the hospital. The high-risk patients are then assessed by an enhanced-fall risk algorithm. Priority charting and in-room focus is given to these patients. The priority patients are then communicated daily during safety huddle for awareness and then indicated on the tracking board.

- Evidence-based care protocols are utilized and reinforced by infection prevention. These include hand hygiene compliance, monitoring hospital-acquired infections, high-level disinfection, and central line and foley line care.

- Effective treatment and involves oversight with leadership engagement through roll-out of Just Culture with safe and timely reporting. Executives oversee all internal reporting which is then trended for opportunities, process change management with the Plan-Do-Study-Act (PDSA) cycle for rapid improvement. Reporting includes root cause analysis of events with stakeholders to identify underlying causes.

- Effective treatment in rural communities lends to coordinated efforts to serve the community through community collaboration in emergency responses with local agencies, such as fire, EMS, and County relief.

Care coordination

Adventist Health Howard Memorial addresses care coordination and ensures smooth transitions through utilization of Care Concierge who connects with patients while in the hospital to assess needs, they will set up follow up appointments with their primary care physician or specialist, if needed, transportation needs will be assessed and arrangements will be made to meet the need, follow up phone calls post discharge will be conducted as reminders for appointments and needs for the patient. This 1:1 navigation is tailored to each patient's needs.

In addition to care concierge, there are two full time employees that work in Case Management who are care coordinators. The care coordinators help set up home health, DME needs, and additional appointments as needed. The care coordinators work with the patient, the case management team, and the patient's family to assess needs.

As an outreach program, we have the Compass team. This team follows all Partnership Health patients that are referred from our social workers or the case management team. They close gaps in follow up care and the needs of the patient once they are discharged from the hospital. They also have a street medicine program to address the unhoused and bring medicine to where they are. This aids in reduction of ER utilization and readmissions.

We are proud to have a substance use disorder program which employs a full-time substance use navigator (SUN). When referred by any staff, inpatients receive a substance use navigation

consultation. Once this consultation is completed, the SUN will coordinate with case management and the provider for a treatment plan that can be initiated inpatient and follow the patient post discharge.

A new program that supports patients who are unhoused, is the Restoration House respite program. This program can house patients post discharge for up to 60 days. They offer meals, minor medical support, smoking cessation, substance use disorder navigation, rehabilitation, job assistance. This program has been successful to reduce readmissions and ensure post discharge medical compliance with medications, treatment, and therapy. Areas for improvement here include expansion of this housing in the future to serve a larger population.

Access to care

AHHM hospital is located in a very rural geographical area. Despite recruitment has proving to be a challenge, the organization maintains a strong commitment to ensuring equitable access to healthcare services. Performance in this priority area reflects both the unique challenges of rural health delivery and the hospital's proactive strategy to reduce barriers of the underserved populations in this County.

The hospital provides 24/7 basic emergency services, primary care access. Our second largest disparity is related to transportation. Our team utilizes Partnership Health of CA transportation services to aid in follow-up appointments or establishment of new patient appointments.

In contribution to access to care, we have contracts for telehealth in the ambulatory setting for Behavioral Health, Cardiology, Pain management and Substance use Navigation. For the inpatient side we have telehealth support for Behavioral Health, Neurology, Infection Disease, Intensivist, Cardiology, Pediatrics, and Nephrology.

This region serves many Native American Tribes. There are two local Tribal Health clinics where culturally appropriate services are rendered. To ensure access, appointments are set up ahead of discharge per patients' preference.

The hospital also invests in cultural and language appropriate services to ensure that patients with diverse backgrounds can navigate care without barriers. This includes use of interpretation services provided by CyraCom translation services, in-house certified translators, and publicly posted signage where patients can relay their preferred language. The hospital has two physical locations where we have "Text, telephone, typewriter" (TTT) phones set up for the hearing impaired.

There have been major efforts to expand service line via telemedicine for virtual visits.

We offer in-person culturally appropriate financial counseling which includes enrollment in Medicaid, or local assistance programs.

Expectations during patient throughput include bedside shift report to include the patient and family with identification of access concerns. This is followed by our case management and social work team. These navigators provide handoff and coordinate care efforts throughout the continuum of stay.

The hospital has representatives that sit on the Community Health Needs Assessment committee to help address access concerns and create partnership with community organizations.

Methodology Guidelines

Did the hospital follow the methodology in the Measures Submission Guide? (Y/N)
