

Hospital Equity Measures Report

General Information

Report Type:	Hospital Equity Measures Report
Year:	2024
Hospital Name:	ADVENTIST HEALTH SIMI VALLEY
Facility Type:	General Acute Care Hospital
Hospital HCAI ID:	106560525
Report Period:	1/1/2024 - 12/31/2024
Status:	Submitted
Due Date:	11/29/2025
Last Updated:	03/16/2026
Hospital Location with Clean Water and Air:	N
Hospital Web Address for Equity Report:	https://www.adventisthealth.org/about-us/community-benefit/

Overview

Assembly Bill No. 1204 requires the Department of Health Care Access and Information (HCAI) to develop and administer a Hospital Equity Measures Reporting Program to collect and post summaries of key hospital performance and patient outcome data regarding sociodemographic information, including but not limited to age, sex, race/ethnicity, payor type, language, disability status, and sexual orientation and gender identity.

Hospitals (general acute, children's, and acute psychiatric) and hospital systems are required to annually submit their reports to HCAI. These reports contain summaries of each measure, the top 10 disparities, and the equity plans to address the identified disparities. HCAI is required to maintain a link on the HCAI website that provides access to the content of hospital equity measures reports and equity plans to the public. All submitted hospitals are required to post their reports on their websites, as well.

Laws and Regulations

For more information on Assembly Bill No. 1204, please visit the following link by copying and pasting the URL into your web browser:

https://leginfo.legislature.ca.gov/faces/billTextClient.xhtml?bill_id=202120220AB1204

Hospital Equity Measures

Joint Commission Accreditation

General acute care hospitals are required to report three structural measures based on the Commission Accreditation's Health Care Disparities Reduction and Patient-Centered Communication Accreditation Standards. For more information on these measures, please visit the following link by copying and pasting the URL into your web browser:

<https://www.jointcommission.org/standards/r3-report/r3-report-issue-36-new-requirements-to-reduce>

-health-care-disparities/

The first two structural measures are scored as "yes" or "no"; the third structural measure comprises the percentages of patients by five categories of preferred languages spoken, in addition to one other/unknown language category.

Designate an individual to lead hospital health equity activities (Y = Yes, N = No).

Y

Provide documentation of policy prohibiting discrimination (Y = Yes, N = No).

Y

Number of patients that were asked their preferred language, five defined categories and one other/unknown languages category.

49490

Table 1. Summary of preferred languages reported by patients.

Languages	Number of patients who report preferring language	Total number of patients	Percentage of total patients who report preferring language (%)
English Language	44877	49490	90.7
Spanish Language	4313	49490	8.7
Asian Pacific Islander Languages	100	49490	0.2
Middle Eastern Languages	123	49490	0.2
American Sign Language	suppressed	49490	suppressed
Other Languages	suppressed	49490	suppressed

Centers for Medicare & Medicaid Services (CMS) Hospital Commitment to Health Equity Structural (HCHE) Measure

There are five domains that make up the CMS Hospital Commitment to HCHE measures. Each domain is scored as "yes" or "no." In order to score "yes," a general acute care hospital is required to confirm all the domain's attestations. Lack of one or more of the attestations results in a score of "no." For more information on the CMS Hospital Commitment to HCHE measures, please visit the following link by copying and pasting the URL into your web browser:

<https://data.cms.gov/provider-data/topics/hospitals/health-equity>

Centers for Medicare & Medicaid Services (CMS) Hospital Commitment to Health Equity Structural (HCHE) Measure Domain 1: Strategic Planning (Yes/No)

- Our hospital strategic plan identifies priority populations who currently experience health disparities.
- Our hospital strategic plan identifies healthcare equity goals and discrete action steps to achieve these goals.
- Our hospital strategic plan outlines specific resources that have been dedicated to achieving our equity goals.
- Our hospital strategic plan describes our approach for engaging key stakeholders, such as community-based organizations.

Y

CMS HCHE Measure Domain 2: Data Collection (Yes/No)

- Our hospital strategic plan identifies healthcare equity goals and discrete action steps to achieve these goals.
- Our hospital has training for staff in culturally sensitive collection of demographics and/or social determinant of health

information.

- Our hospital inputs demographic and/or social determinant of health information collected from patients into structured, interoperable data elements using a certified electronic health record (EHR) technology.

Y

CMS HCHE Measure Domain 3: Data Analysis (Yes/No)

- Our hospital stratifies key performance indicators by demographic and/or social determinants of health variables to identify equity gaps and includes this information in hospital performance dashboards.

Y

CMS HCHE Measure Domain 4: Quality Improvement (Yes/No)

- Our hospital participates in local, regional or national quality improvement activities focused on reducing health disparities.

Y

CMS HCHE Measure Domain 5: Leadership Engagement (Yes/No)

- Our hospital senior leadership, including chief executives and the entire hospital board of trustees, annually reviews our strategic plan for achieving health equity.
- Our hospital senior leadership, including chief executives and the entire hospital board of trustees, annually review key performance indicators stratified by demographic and/or social factors.

Y

Centers for Medicare & Medicaid Services (CMS) Social Drivers of Health (SDOH)

General acute care hospitals are required to report on rates of screenings and intervention rates among patients above 18 years old for five health related social needs (HRSN), which are food insecurity, housing instability, transportation problems, utility difficulties, and interpersonal safety. These rates are reported separately as being screened as positive for any of the five HRSNs, positive for each individual HRSN, and the intervention rate for each positively screened HRSN. For more information on the CMS SDOH, please visit the following link by copying and pasting the URL into your web browser:

<https://www.cms.gov/priorities/innovation/key-concepts/social-drivers-health-and-health-related-social-needs>

Number of patients admitted to an inpatient hospital stay who are 18 years or older on the date of admission and are screened for all of the five HRSN

3105

Total number of patients who are admitted to a hospital inpatient stay and who are 18 years or older on the date of admission

3883

Rate of patients admitted for an inpatient hospital stay who are 18 years or older on the date of admission, were screened for an HRSN, and who screened positive for one or more of the HRSNs

80

Table 2. Positive screening rates and intervention rates for the five Health Related Social Needs of the Centers of Medicare & Medicaid Services (CMS) Social Drivers of Health (SDOH).

Social Driver of Health	Number of positive screenings	Rate of positive screenings (%)	Number of positive screenings who received intervention	Rate of positive screenings who received intervention (%)
Food Insecurity	78	2.5	0	
Housing Instability	74	2.4	0	
Transportation Problems	70	2.3	0	
Utility Difficulties	35	1.1	0	
Interpersonal Safety	suppressed	suppressed	0	

Core Quality Measures for General Acute Care Hospitals

There are two quality measures from the Hospital Consumer Assessment of Healthcare Providers and Systems (HCAHPS) survey. For more information on the HCAHPS survey, please visit the following link by copying and pasting the URL into your web browser:

<https://hcahpsonline.org/en/survey-instruments/>

Patient Recommends Hospital

The first HCAHPS quality measure is the percentage of patients who would recommend the hospital to friends and family. For this measure, general acute care hospitals provide the percentage of patient respondents who responded "probably yes" or "definitely yes" to whether they would recommend the hospital, the percentage of the people who responded to the survey (i.e., the response rate), and the inputs for the percentages. The percentages and inputs are stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding HCAHPS question number is 19.

Number of respondents who replied "probably yes" or "definitely yes" to HCAHPS Question 19, "Would you recommend this hospital to your friends and family?"

411

Total number of respondents to HCAHPS Question 19

442

Percentage of total respondents who responded "probably yes" or "definitely yes" to HCAHPS Question 19

93

Total number of people surveyed on HCAHPS Question 19

2105

Response rate, or the percentage of people who responded to HCAHPS Question 19

21

Table 3. Patient recommends hospital by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

Race and/or Ethnicity	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
American Indian or Alaska Native					
Asian					
Black or African American					
Hispanic or Latino					
Middle Eastern or North African					
Multiracial and/or Multiethnic (two or more races)					
Native Hawaiian or Pacific Islander					
White					

Age	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Age < 18					
Age 18 to 34					
Age 35 to 49					
Age 50 to 64					
Age 65 Years and Older					

Sex assigned at birth	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Female					
Male					
Unknown					

Payer Type	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Medicare					
Medicaid					
Private					
Self-Pay					
Other					

Preferred Language	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
English Language					
Spanish Language					
Asian Pacific Islander Languages					
Middle Eastern Languages					
American Sign Language					
Other/Unknown Languages					

Disability Status	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Does not have a disability					
Has a mobility disability					
Has a cognition disability					
Has a hearing disability					
Has a vision disability					
Has a self-care disability					
Has an independent living disability					

Sexual Orientation	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Lesbian, gay or homosexual					
Straight or heterosexual					
Bisexual					
Something else					
Don't know					
Not disclosed					

Gender Identity	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Female					
Female-to-male (FTM)/ transgender male/trans man					
Male					
Male-to-female (MTF)/ transgender female/trans					
Non-conforming gender					
Additional gender category or other					
Not disclosed					

Patient Received Information in Writing

The second HCAHPS quality measure is the percentage of patients who reported receiving information in writing on symptoms and health problems to look out for after leaving the hospital. General acute care hospitals are required to provide the percentage of patient respondents who responded "yes" to being provided written information, the percentage of the people who responded to the survey (i.e., the response rate), and the inputs for these percentages. These percentages and inputs are stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding HCAHPS question number is 17.

Number of respondents who replied "yes" to HCAHPS Question 17, "During this hospital stay, did you get information in writing about what symptoms or health problems to look out for after you left the

hospital?"

376

Total number of respondents to HCAHPS Question 17

442

Percentage of respondents who responded "yes" to HCAHPS Question 17

85.1

Total number of people surveyed on HCAHPS Question 17

2105

Response rate, or the percentage of people who responded to HCAHPS Question 17

21

Table 4. Patient reports receiving information in writing about symptoms or health problems by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

Race and/or Ethnicity	Number of "yes" responses	Total number of responses	Percentage of "yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)

Agency for Healthcare Research and Quality (AHRQ) Indicators

General acute care hospitals are required to report on two indicators from the Agency for Healthcare Research and Quality (AHRQ). For general information about AHRQ indicators, please visit the following link by copying and pasting the URL into your web browser:
<https://qualityindicators.ahrq.gov/>

Pneumonia Mortality Rate

The Pneumonia Mortality Rate is defined as the rate of in-hospital deaths per 1,000 hospital discharges with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission for patients ages 18 years and older. General acute care hospitals report the Pneumonia Mortality Rate by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding AHRQ Inpatient Quality Indicator is 20. For more information about this indicator, please visit the following link by copying and pasting the URL into your web browser:
https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_20_Pneumonia_Mortality_Rate.pdf

Number of in-hospital deaths with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission

20

Total number of hospital discharges with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission

409

Rate of in-hospital deaths per 1,000 hospital discharges with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission

48.9

Death Rate among Surgical Inpatients with Serious Treatable Complications

The Death Rate among Surgical Inpatients with Serious Treatable Complications is defined as the rate of in-hospital deaths per 1,000 surgical discharges among patients ages 18-89 years old or obstetric patients with serious treatable complications. General acute care hospitals report this measure by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding AHRQ Patient Safety Indicator is 04. For more information about this indicator, please visit the following link by copying and pasting the URL into your web browser:

<https://qualityindicators.ahrq.gov/Downloads/Modules/PSI/V2023/TechSpecs/>

California Maternal Quality Care Collaborative (CMQCC) Core Quality Measures

There are three core quality maternal measures adopted from the California Maternal Quality Care Collaborative (CMQCC).

CMQCC Nulliparous, Term, Singleton, Vertex (NTSV) Cesarean Birth Rate

The CMQCC Nulliparous, Term, Singleton, Vertex (NTSV) Cesarean Birth Rate is defined as nulliparous women with a term (at least 37 weeks gestation), singleton baby in a vertex position delivered by cesarian birth. General acute care hospitals report the NTSV Cesarean Birth Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. For more information, please visit the following link by copying and pasting the URL into your web browser:

<https://www.cmqcc.org/quality-improvement-toolkits/supporting-vaginal-birth/ntsv-cesarean-birth-measure-specifications>

CMQCC Vaginal Birth After Cesarean (VBAC) Rate

The CMQCC Vaginal Birth After Cesarean (VBAC) Rate is defined as vaginal births per 1,000 deliveries by patients with previous Cesarean deliveries. General acute care hospitals report the VBAC Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The VBAC Rate uses the specifications of AHRQ Inpatient Quality Indicator 22. For more information, please visit the following link by copying and pasting the URL into your web browser:

[https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_22_Vaginal_Birth_After_Cesarean_\(VBAC\)_Delivery_Rate_Uncomplicated.pdf](https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_22_Vaginal_Birth_After_Cesarean_(VBAC)_Delivery_Rate_Uncomplicated.pdf)

CMQCC Exclusive Breast Milk Feeding Rate

The CMQCC Exclusive Breast Milk Feeding Rate is defined as the newborns per 100 who reached at least 37 weeks of gestation (or 3000g if gestational age is missing) who received breast milk

exclusively during their stay at the hospital. Other criteria are that the newborns did not go to the neonatal intensive care unit (NICU), transfer, or die, did not reflect multiple gestation, and did not have codes for parenteral nutrition or galactosemia. General acute care hospitals report the Exclusive Breast Milk Feeding Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The CMQCC Exclusive Breast Milk Feeding Rate uses the Joint Commission National Quality Measure PC-05. For more information, please visit the following link by copying and pasting the URL into your web browser: <https://manual.jointcommission.org/releases/TJC2024B/MIF0170.html>

Number of newborn cases that were exclusively fed breast milk during their hospital stay and meet the inclusion and exclusion criteria

HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate

General acute care hospitals are required to report several HCAI All-Cause Unplanned 30-Day Hospital Readmission Rates, which are broadly defined as the percentage of hospital-level, unplanned, all-cause readmissions after admission for eligible conditions within 30 days of hospital discharge for patients aged 18 years and older. These rates are first stratified based on any eligible condition, mental health disorders, substance use disorders, co-occurring disorders, and no behavioral health diagnosis. Then, each condition-stratified hospital readmission rate is further stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. For more information on the HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate, please visit the following link by copying and pasting the URL into your web browser:

https://hcai.ca.gov/wp-content/uploads/2024/10/HCAI-All-Cause-Readmission-Rate-Exclusions_ADA.pdf

HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate – Any Eligible Condition

Number of inpatient hospital admissions which occurs within 30 days of the discharge date of an eligible index admission and were 18 years or older at time of admission

581

Total number of patients who were admitted to the general acute care hospital and were 18 years or older at time of admission

4178

Rate of hospital-level, unplanned, all-cause readmissions after admission for any eligible condition within 30 days of hospital discharge for patients aged 18 and older

13.9

Table 10. HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate for any eligible condition by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

Health Equity Plan

All general acute care hospitals report a health equity plan that identifies the top 10 disparities and a written plan to address them.

Top 10 Disparities

Disparities for each hospital equity measure are identified by comparing the rate ratios by stratification groups. Rate ratios are calculated differently for measures with preferred low rates and those with preferred high rates. Rate ratios are calculated after applying the California Health and Human Services Agency's "Data De-Identification Guidelines (DDG)," dated September 23, 2016.

Table 15. Top 10 disparities and their rate ratio values.

Measures	Stratifications	Stratification Group	Stratification Rate	Reference Group	Reference Rate	Rate Ratio
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Age (excluding maternal measures)	65 and older	15.2	18 to 34	5.9	2.6
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Age (excluding maternal measures)	35 to 49	12.9	18 to 34	5.9	2.2
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Age (excluding maternal measures)	50 to 64	12.5	18 to 34	5.9	2.1
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Race and/or Ethnicity	Black or African American	21.1	Asian	12.2	1.7
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Expected Payor	Medicare	15.5	Private	9.2	1.7
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Expected Payor	Medicaid	13.3	Private	9.2	1.4
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Race and/or Ethnicity	Hispanic or Latino	15.2	Asian	12.2	1.2
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate, stratified by behavioral health diagnosis (No Behavioral Health Diagnosis)	Sex Assigned at Birth	Male	13.8	Female	12.2	1.1
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Race and/or Ethnicity	White	13.8	Asian	12.2	1.1
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Sex Assigned at Birth	Male	14.5	Female	13.4	1.1

Plan to address disparities identified in the data

Disparities 1-3 Age related readmission disparities

Population impact Adults 35-65+ years of age have higher readmissions as to patients in the 18-34 group

Actions planned

Enhance heart failure management and discharge planning processes

Develop age friendly printed education

Assist with securing primary care providers

Implement age friendly medication counseling

Provide goals of care discussions for patients 65+

Involve other caregivers in discharge planning

Measurable objectives: Reduce 30-day readmission rate ratio for ages 35-49 from 2.0 to 1.5; for ages 50-64 from 2.0 to 1.5; and for ages 65+ from 2.4 to 1.9 within 24 months

Timeframe: Launch by Q1 2026; reassess Q4 2026 & Q2 2027

Disparity #4: Race/Ethnicity disparity

Population impact: Black patients are experiencing higher readmissions as compared to the reference group of Asians

Actions Planned

Strengthen culturally competent discharge planning & follow-up

Enhance community-based health coaching and home visits for patients with chronic diseases

Provide goals of care discussions for patients 65+

Involve other caregivers in discharge planning

Assist with securing primary care providers for patients
Perform deeper dive into social determinants of health and develop actions and resources
Measurable objectives: Reduce 30 days readmission rate ratio in Black or African American patients from 1.7 to 1.3 within 24 months
Timeframe: Launch by Q1 2026; reassess annually

Disparity #5: Medicare disparity

Population impact: Patients with the payor of Medicare are experiencing more readmissions when compared to the reference group of private payors

Actions planned

Enhance heart failure management and discharge planning processes including patient education

Develop age friendly printed education

Assist with securing primary care providers for patients

Implement age-friendly medication counseling

Perform deeper dive into social determinants of health and develop actions and resources

Provide goals of care discussions for patients 65+

Involve other caregivers in discharge planning

Measurable objectives: Reduce 30 days readmission rate ratio in Medicare payor patients from 1.7 to 1.3 within 24 months

Timeframe: Launch by Q1 2026; reassess annually

Disparity #6: Medicaid disparity

Population impact: Patients with payor of Medicaid are experiencing higher readmissions when compared to the reference group of private payors

Actions planned

Involve other caregivers in discharge planning

Assist with securing primary care providers for patients

Perform deeper dive into social determinants of health and develop actions and resources

Measurable objectives: Reduce 30 days readmission rate ratio in Medicaid payor patients from 1.5 to 1.2 within 24 months

Timeframe: Launch by Q2 2026; reassess annually

Disparity #7: Race/Ethnicity disparity

Population impact: Hispanic/Latino patients are experiencing higher readmissions when compared to the reference group of Asians

Actions Planned

Collection of preferred language in the EHR to highlight patients with need for interpretive services

Continued 24/7 availability of interpreter services

Strengthen culturally competent discharge planning

Enhance community-based health coaching and home visits for Hispanic/Latino patients with chronic diseases

Provide goals of care discussions for patients 65+

Involve other caregivers in discharge planning

Assist with securing primary care providers for patients

Measurable objectives: Reduce 30 days readmission rate ratio in Hispanic/Latino patients from 1.3 to 1.0 within 24 months

Timeframe: Launch end of Q1 2026; reassess annually

Disparity #8: Race/Ethnicity disparity

Population impact: White patients are experiencing more readmissions when compared to the

reference group of Asians

Actions Planned

Involve other caregivers in discharge planning

Assist with securing primary care providers for patients

Perform deeper dive into social determinants of health and develop actions and resources

Measurable objectives: Reduce 30 days readmission rate ratio in Hispanic/Latino patients from 1.3 to 1.0 within 24 months

Timeframe: Launch by Q2 2026; reassess annually

Disparity #9-10: Sex disparity

Population impact: Males are experiencing more readmissions when compared to the female reference group

Actions Planned

Engage with community resources and support services

Structured and personalized education to promote self-efficacy in chronic disease management

Involve other caregivers in discharge planning

Assist with securing primary care providers for patients

Perform deeper dive into social determinants of health and develop actions and resources

Objectives: Reduce 30 days readmission rate ratio in male patients from 1.1 to 1.0 within 24 months

Timeframe: Launch by Q2 2026; reassess annually

Performance in the priority area

General acute care hospitals are required to provide hospital equity plans that address the top 10 disparities by identifying population impact and providing measurable objectives and specific timeframes. For each disparity, hospital equity plans will address performance across priority areas: person-centered care, patient safety, addressing patient social drivers of health, effective treatment, care coordination, and access to care.

Person-centered care

Adventist Health Simi Valley Hospital is committed to care that is respectful of and responsive to individual patient preferences, needs, and values. This is reflected by our continuing evolution in size, scope, and technology to provide the high standards of care our patients and community expect and depend on. Patient centered care is demonstrated by these key strategies:

Collection of race, ethnicity, and primary language (REaL data) at the point of inpatient entry to facilitate care

Collection of social determinants of health (SDOH) data that trigger a social service consult, as appropriate

24/7 availability of interpreter services in the patient's preferred language improving communication and coordination of care

Collecting and analyzing patient/family stated reasons for readmission

Promoting diversity in the clinical, non-clinical, and provider staff workforce

Bedside hand-offs include the patient and family in communication, collaboration, and decision making

Involving patients and families in goals of care conversations

Enhancing patient/family health literacy and self-efficacy in disease management with structured and personalized education

Availability of chaplaincy services, along with other spiritual partners, to assist in providing spiritual and emotional support to patients and families of all or no faiths and ethnicities

Targeting growth and support opportunities to needs identified in the 2025 Community Health Needs Assessment

Multidisciplinary rounds and care plans to address individualized concerns
Patient portal to access medical record and information
Conversion to EPIC electronic health record in 2026
Leadership rounding program to promote conversations with patients and families

Patient safety

Adventist Health Simi Valley is committed to providing a safe, healing environment to minimize risks and harm to patients during care delivery. The priority of Patient Safety is demonstrated through the following key strategies:

The building of a robust and ongoing culture of High Reliability Organizations that has included training for all staff and leadership

Supporting and encouraging reporting of all safety concerns, whether an actual event or near miss

Good Catch recognition and reward program to encourage the reporting of averted safety events

Providing resources to establish a Patient Safety Manager position and program in 2024 to focus on understanding and preventing safety events

Perform a Failure Mode Effects Analysis (FMEA) at least every 18 months to predict and mitigate errors

Established fall prevention and pressure injury programs

The use of many built in electronic medical record risk flags including social determinants of health, nutrition, fall, pressure injury, aspiration, sepsis, and allergies

Transitional Pharmacist to aid medication instructions, understanding, and reconciliation before discharge

Addressing patient social drivers of health

Adventist Health Simi Valley embraces its calling and responsibility to invest in understanding and addressing those needs that, although not medical issues in themselves, have a profound impact on patients and their families' ability to heal and maintain their health, wholeness, and hope. Key strategies in this are:

Participating in community partnerships and events to engage and collaborate with traditional and nontraditional partners, including the weekly Farmers Market, faith-based non-profit organizations, and community gathering places.

Screening for and responding to identified needs such as housing, food, income, and transportation with follow-up social service consults as appropriate

Partnerships with community-based non-profit organizations, faith-based non-profit organizations, businesses, and other organizations to meet patient and community needs.

Researching, producing, and distributing a resource guide centered around categories of social determinants of health to be completed in 2026

Participation and support of the 2025 Community Health Needs Assessment process and action plans

Performance in the priority area continued

Performance across all of the following priority areas.

Effective treatment

Adventist Health Simi Valley strives to provide evidence-based, timely, and appropriate care. This is reflected by our continuing evolution in size, scope, and technology to provide the high standards of care our patients and community expect and depend on. Key strategies that highlight effective treatment include:

Performance improvement monitoring and projects including treatment for heart attacks, stroke, deep vein thrombosis prevention, and sepsis

Ongoing efforts in hospital departmental timeliness and outcomes of treatment through our Quality Assessment and Performance Improvement Program
Implementing targeted post-acute coordination of care in early 2026
Incorporating evidence-based practices in policy and procedure development and renewal
Rapid Response Teams to assist in timely intervention in urgent situations
Use of telemedicine in the neurology and psychiatric areas to aid in the diagnosis and treatment of patients
Joint Replacement classes to assist patients in planning and preparing for surgery
ERAS (Early Recovery After Surgery) protocols to optimize patients before surgery and support early mobilization
Development of multi-faceted robotic surgery program to address patient needs as well as decrease post-operative pain and recovery time

Care coordination

Adventist Health Simi Valley strives to coordinate care and services to promote quality, safety, and patient experience. This is illustrated by:
Integration of SDOH data allows the hospital staff to identify patients who may need additional support or referrals
Electronic health record flags for healthcare workers to notify them of readmissions, meeting referral criteria, or core measures to ensure compliance to standards
Multidisciplinary rounds to discuss and plan patient's course through hospitalization
Multidisciplinary care plans to integrate and coordinate clinical plans and actions
Bedside shift reports to integrate the patient's voice and wishes into care
Daily huddles to raise awareness to potential issues
Trio rounding with physician/nurse/patient to coordinate information and planning

Access to care

To deliver on our mission of living God's love by inspiring health, wholeness, and hope, Adventist Health Simi Valley supports health care equity and the ability of patients to obtain timely, culturally appropriate services. This is illustrated by:

Partnership with Adventist Health Primary Care clinics to increase accessibility and primary care provider availability
Mammography and Breast Health Program at the Nancy Reagan Breast Center
Monitoring EMTALA logs for appropriate care and transfers
Partnership with Adventist Home Health/Hospice services to better serve the patients and families with their transition to a home environment
Plans to strengthen culturally competent care to include discharge planning, and follow-up in 2026
Substance Abuse Navigator program
Patient portal to allow patients to access lab results and other portions of the medical record
Financial assistance and/or assistance in obtaining government program coverage
"Find a Doctor" service and link to make an appointment from our website

Methodology Guidelines

Did the hospital follow the methodology in the Measures Submission Guide? (Y/N)
