

# Hospital Equity Measures Report

## General Information

Report Type:	Hospital Equity Measures Report
Year:	2024
Hospital Name:	ADVENTIST HEALTH TULARE
Facility Type:	General Acute Care Hospital
Hospital HCAI ID:	106540816
Report Period:	01/01/2024 - 12/31/2024
Status:	Complete
Due Date:	11/29/2025
Last Updated:	03/03/2026
Hospital Location with Clean Water and Air:	N
Hospital Web Address for Equity Report:	<a href="https://www.adventisthealth.org/about-us/health-equity">https://www.adventisthealth.org/about-us/health-equity</a>

## Overview

Assembly Bill No. 1204 requires the Department of Health Care Access and Information (HCAI) to develop and administer a Hospital Equity Measures Reporting Program to collect and post summaries of key hospital performance and patient outcome data regarding sociodemographic information, including but not limited to age, sex, race/ethnicity, payor type, language, disability status, and sexual orientation and gender identity.

Hospitals (general acute, children's, and acute psychiatric) and hospital systems are required to annually submit their reports to HCAI. These reports contain summaries of each measure, the top 10 disparities, and the equity plans to address the identified disparities. HCAI is required to maintain a link on the HCAI website that provides access to the content of hospital equity measures reports and equity plans to the public. All submitted hospitals are required to post their reports on their websites, as well.

## Laws and Regulations

For more information on Assembly Bill No. 1204, please visit the following link by copying and pasting the URL into your web browser:  
[https://leginfo.legislature.ca.gov/faces/billTextClient.xhtml?bill\\_id=202120220AB1204](https://leginfo.legislature.ca.gov/faces/billTextClient.xhtml?bill_id=202120220AB1204)

## Hospital Equity Measures

### Joint Commission Accreditation

General acute care hospitals are required to report three structural measures based on the Commission Accreditation's Health Care Disparities Reduction and Patient-Centered Communication Accreditation Standards. For more information on these measures, please visit the following link by copying and pasting the URL into your web browser:

The first two structural measures are scored as "yes" or "no"; the third structural measure comprises the percentages of patients by five categories of preferred languages spoken, in addition to one other/unknown language category.

Designate an individual to lead hospital health equity activities (Y = Yes, N = No).

Y

Provide documentation of policy prohibiting discrimination (Y = Yes, N = No).

Y

Number of patients that were asked their preferred language, five defined categories and one other/unknown languages category.

36744

Table 1. Summary of preferred languages reported by patients.

Languages	Number of patients who report preferring language	Total number of patients	Percentage of total patients who report preferring language (%)
English Language	29970	36744	81.6
Spanish Language	6519	36744	17.7
Asian Pacific Islander Languages	69	36744	0.2
Middle Eastern Languages	51	36744	0.1
American Sign Language	18	36744	0.0
Other Languages	117	36744	0.3

**Centers for Medicare & Medicaid Services (CMS) Hospital Commitment to Health Equity Structural (HCHE) Measure**

There are five domains that make up the CMS Hospital Commitment to HCHE measures. Each domain is scored as "yes" or "no." In order to score "yes," a general acute care hospital is required to confirm all the domain's attestations. Lack of one or more of the attestations results in a score of "no." For more information on the CMS Hospital Commitment to HCHE measures, please visit the following link by copying and pasting the URL into your web browser:

<https://data.cms.gov/provider-data/topics/hospitals/health-equity>

**Centers for Medicare & Medicaid Services (CMS) Hospital Commitment to Health Equity Structural (HCHE) Measure Domain 1: Strategic Planning (Yes/No)**

- Our hospital strategic plan identifies priority populations who currently experience health disparities.
- Our hospital strategic plan identifies healthcare equity goals and discrete action steps to achieve these goals.
- Our hospital strategic plan outlines specific resources that have been dedicated to achieving our equity goals.
- Our hospital strategic plan describes our approach for engaging key stakeholders, such as community-based organizations.

Y

**CMS HCHE Measure Domain 2: Data Collection (Yes/No)**

- Our hospital strategic plan identifies healthcare equity goals and discrete action steps to achieve these goals.
- Our hospital has training for staff in culturally sensitive collection of demographics and/or social determinant of health information.
- Our hospital inputs demographic and/or social determinant of health information collected from patients into structured, interoperable data elements using a certified electronic health record (EHR) technology.

Y

CMS HCHE Measure Domain 3: Data Analysis (Yes/No)

- Our hospital stratifies key performance indicators by demographic and/or social determinants of health variables to identify equity gaps and includes this information in hospital performance dashboards.

Y

CMS HCHE Measure Domain 4: Quality Improvement (Yes/No)

- Our hospital participates in local, regional or national quality improvement activities focused on reducing health disparities.

Y

CMS HCHE Measure Domain 5: Leadership Engagement (Yes/No)

- Our hospital senior leadership, including chief executives and the entire hospital board of trustees, annually reviews our strategic plan for achieving health equity.
- Our hospital senior leadership, including chief executives and the entire hospital board of trustees, annually review key performance indicators stratified by demographic and/or social factors.

Y

Centers for Medicare & Medicaid Services (CMS) Social Drivers of Health (SDOH)

General acute care hospitals are required to report on rates of screenings and intervention rates among patients above 18 years old for five health related social needs (HRSN), which are food insecurity, housing instability, transportation problems, utility difficulties, and interpersonal safety. These rates are reported separately as being screened as positive for any of the five HRSNs, positive for each individual HRSN, and the intervention rate for each positively screened HRSN. For more information on the CMS SDOH, please visit the following link by copying and pasting the URL into your web browser:

<https://www.cms.gov/priorities/innovation/key-concepts/social-drivers-health-and-health-related-social-needs>

Number of patients admitted to an inpatient hospital stay who are 18 years or older on the date of admission and are screened for all of the five HRSN

877

Total number of patients who are admitted to a hospital inpatient stay and who are 18 years or older on the date of admission

1087

Rate of patients admitted for an inpatient hospital stay who are 18 years or older on the date of admission, were screened for an HRSN, and who screened positive for one or more of the HRSNs

80.6

Table 2. Positive screening rates and intervention rates for the five Health Related Social Needs of the Centers of Medicare & Medicaid Services (CMS) Social Drivers of Health (SDOH).

Social Driver of Health	Number of positive screenings	Rate of positive screenings (%)	Number of positive screenings who received intervention	Rate of positive screenings who received intervention (%)
Food Insecurity	80	9.0	0	
Housing Instability	83	9.0	0	
Transportation Problems	60	7.0	0	
Utility Difficulties	31	4.0	0	
Interpersonal Safety	suppressed	suppressed	0	

## Core Quality Measures for General Acute Care Hospitals

There are two quality measures from the Hospital Consumer Assessment of Healthcare Providers and Systems (HCAHPS) survey. For more information on the HCAHPS survey, please visit the following link by copying and pasting the URL into your web browser:

<https://hcahpsonline.org/en/survey-instruments/>

## Patient Recommends Hospital

The first HCAHPS quality measure is the percentage of patients who would recommend the hospital to friends and family. For this measure, general acute care hospitals provide the percentage of patient respondents who responded "probably yes" or "definitely yes" to whether they would recommend the hospital, the percentage of the people who responded to the survey (i.e., the response rate), and the inputs for the percentages. The percentages and inputs are stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding HCAHPS question number is 19.

Number of respondents who replied "probably yes" or "definitely yes" to HCAHPS Question 19, "Would you recommend this hospital to your friends and family?"

133

Total number of respondents to HCAHPS Question 19

145

Percentage of total respondents who responded "probably yes" or "definitely yes" to HCAHPS Question 19

91.7

Total number of people surveyed on HCAHPS Question 19

1208

Response rate, or the percentage of people who responded to HCAHPS Question 19

12.0

Table 3. Patient recommends hospital by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

<b>Race and/or Ethnicity</b>	<b>Number of "probably yes" or "definitely yes" responses</b>	<b>Total number of responses</b>	<b>Percent of "probably yes" or "definitely yes" responses (%)</b>	<b>Total number of patients surveyed</b>	<b>Response rate of patients surveyed (%)</b>
<b>American Indian or Alaska Native</b>

Female-to-male (FTM)/ transgender male/trans man					
Male					
Male-to-female (MTF)/ transgender female/trans woman					
Non-conforming gender					
Additional gender category or other					
Not disclosed					

## Patient Received Information in Writing

The second HCAHPS quality measure is the percentage of patients who reported receiving information in writing on symptoms and health problems to look out for after leaving the hospital. General acute care hospitals are required to provide the percentage of patient respondents who responded "yes" to being provided written information, the percentage of the people who responded to the survey (i.e., the response rate), and the inputs for these percentages. These percentages and inputs are stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding HCAHPS question number is 17.

Number of respondents who replied "yes" to HCAHPS Question 17, "During this hospital stay, did you get information in writing about what symptoms or health problems to look out for after you left the

hospital?"

125

Total number of respondents to HCAHPS Question 17

145

Percentage of respondents who responded "yes" to HCAHPS Question 17

86.2

Total number of people surveyed on HCAHPS Question 17

1208

Response rate, or the percentage of people who responded to HCAHPS Question 17

12.0

Table 4. Patient reports receiving information in writing about symptoms or health problems by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

## Agency for Healthcare Research and Quality (AHRQ) Indicators

General acute care hospitals are required to report on two indicators from the Agency for Healthcare Research and Quality (AHRQ). For general information about AHRQ indicators, please visit the following link by copying and pasting the URL into your web browser:

<https://qualityindicators.ahrq.gov/>

## Pneumonia Mortality Rate

The Pneumonia Mortality Rate is defined as the rate of in-hospital deaths per 1,000 hospital discharges with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission for patients ages 18 years and older. General acute care hospitals report the Pneumonia Mortality Rate by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding AHRQ Inpatient Quality Indicator is 20. For more information about this indicator, please visit the following link by copying and pasting the URL into your web browser:

[https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI\\_20\\_Pneumonia\\_Mortality\\_Rate.pdf](https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_20_Pneumonia_Mortality_Rate.pdf)

## Death Rate among Surgical Inpatients with Serious Treatable Complications

The Death Rate among Surgical Inpatients with Serious Treatable Complications is defined as the rate of in-hospital deaths per 1,000 surgical discharges among patients ages 18-89 years old or obstetric patients with serious treatable complications. General acute care hospitals report this measure by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding AHRQ Patient Safety Indicator is 04. For more information about this indicator, please visit the following link by copying and pasting the URL into your web browser:  
[https://qualityindicators.ahrq.gov/Downloads/Modules/PSI/V2023/TechSpecs/PSI\\_04\\_Death\\_Rate\\_among\\_Surgical\\_Inpatients\\_with\\_Serious\\_Treatable\\_Complications.pdf](https://qualityindicators.ahrq.gov/Downloads/Modules/PSI/V2023/TechSpecs/PSI_04_Death_Rate_among_Surgical_Inpatients_with_Serious_Treatable_Complications.pdf)

Number of in-hospital deaths among patients aged 18-89 years old or obstetric patients with serious treatable complications

## California Maternal Quality Care Collaborative (CMQCC) Core Quality Measures

There are three core quality maternal measures adopted from the California Maternal Quality Care Collaborative (CMQCC).

### CMQCC Nulliparous, Term, Singleton, Vertex (NTSV) Cesarean Birth Rate

The CMQCC Nulliparous, Term, Singleton, Vertex (NTSV) Cesarean Birth Rate is defined as nulliparous women with a term (at least 37 weeks gestation), singleton baby in a vertex position delivered by cesarian birth. General acute care hospitals report the NTSV Cesarean Birth Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. For more information, please visit the following link by copying and pasting the URL into your web browser:

<https://www.cmqcc.org/quality-improvement-toolkits/supporting-vaginal-birth/ntsv-cesarean-birth-measure-specifications>

## CMQCC Vaginal Birth After Cesarean (VBAC) Rate

The CMQCC Vaginal Birth After Cesarean (VBAC) Rate is defined as vaginal births per 1,000 deliveries by patients with previous Cesarean deliveries. General acute care hospitals report the VBAC Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The VBAC Rate uses the specifications of AHRQ Inpatient Quality Indicator 22. For more information, please visit the following link by copying and pasting the URL into your web browser:

[https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI\\_22\\_Vaginal\\_Birth\\_After\\_Cesarean\\_\(VBAC\)\\_Delivery\\_Rate\\_Uncomplicated.pdf](https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_22_Vaginal_Birth_After_Cesarean_(VBAC)_Delivery_Rate_Uncomplicated.pdf)

Number of vaginal delivery among cases with previous Cesarean delivery that meet the inclusion and exclusion criteria

suppressed

Total number of birth discharges with previous Cesarean delivery that meet the inclusion and exclusion criteria

suppressed

Rate of vaginal delivery per 1,000 deliveries by patients with previous Cesarean deliveries  
suppressed

## CMQCC Exclusive Breast Milk Feeding Rate

The CMQCC Exclusive Breast Milk Feeding Rate is defined as the newborns per 100 who reached at least 37 weeks of gestation (or 3000g if gestational age is missing) who received breast milk

exclusively during their stay at the hospital. Other criteria are that the newborns did not go to the neonatal intensive care unit (NICU), transfer, or die, did not reflect multiple gestation, and did not have codes for parenteral nutrition or galactosemia. General acute care hospitals report the Exclusive Breast Milk Feeding Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The CMQCC Exclusive Breast Milk Feeding Rate uses the Joint Commission National Quality Measure PC-05. For more information, please visit the following link by copying and pasting the URL into your web browser:  
<https://manual.jointcommission.org/releases/TJC2024B/MIF0170.html>

Number of newborn cases that were exclusively fed breast milk during their hospital stay and meet the inclusion and exclusion criteria

NA

Total number of newborn cases born in the hospital that meet the inclusion and exclusion criteria

NA

Rate of newborn cases per 100 that were exclusively fed breast milk during their hospital stay and meet the inclusion and exclusion criteria

## HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate

General acute care hospitals are required to report several HCAI All-Cause Unplanned 30-Day Hospital Readmission Rates, which are broadly defined as the percentage of hospital-level, unplanned, all-cause readmissions after admission for eligible conditions within 30 days of hospital discharge for patients aged 18 years and older. These rates are first stratified based on any eligible condition, mental health disorders, substance use disorders, co-occurring disorders, and no behavioral health diagnosis. Then, each condition-stratified hospital readmission rate is further stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. For more information on the HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate, please visit the following link by copying and pasting the URL into your web browser:

[https://hcai.ca.gov/wp-content/uploads/2024/10/HCAI-All-Cause-Readmission-Rate-Exclusions\\_ADA.pdf](https://hcai.ca.gov/wp-content/uploads/2024/10/HCAI-All-Cause-Readmission-Rate-Exclusions_ADA.pdf)

## HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate – Any Eligible Condition

Number of inpatient hospital admissions which occurs within 30 days of the discharge date of an eligible index admission and were 18 years or older at time of admission

120

Total number of patients who were admitted to the general acute care hospital and were 18 years or older at time of admission

1197

Rate of hospital-level, unplanned, all-cause readmissions after admission for any eligible condition

within 30 days of hospital discharge for patients aged 18 and older  
10.0

## Health Equity Plan

All general acute care hospitals report a health equity plan that identifies the top 10 disparities and a written plan to address them.

## Top 10 Disparities

Disparities for each hospital equity measure are identified by comparing the rate ratios by stratification groups. Rate ratios are calculated differently for measures with preferred low rates and those with preferred high rates. Rate ratios are calculated after applying the California Health and Human Services Agency's "Data De-Identification Guidelines (DDG)," dated September 23, 2016.

Table 15. Top 10 disparities and their rate ratio values.

Measures	Stratifications	Stratification Group	Stratification Rate	Reference Group	Reference Rate	Rate Ratio
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Expected Payor	Medicare	14.9	Medicaid	7.0	2.1
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Race and/or Ethnicity	White	11.0	Hispanic or Latino	9.7	1.1
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Age (excluding maternal measures)	50 to 64	13.0	65 and older	12.2	1.1
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Expected Payor	Private	7.3	Medicaid	7.0	1.0
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Sex Assigned at Birth	Male	10.1	Female	9.9	1.0

### Plan to address disparities identified in the data

Adventist Health Tulare HQI Top 10 Disparity\* list returned 5 Disparities per HCAI's methodology. The following action plan is carefully developed with an evidenced based, standardized workflow, to identify the needs and tailor the care planning to encompass the individual person.

Disparity #1 Expected Payor: Medicare

Population Impact: The Medicare patient population as a disparity rate of 14.9% in comparison to the reference range of Medicaid with 7.0% for All Cause 30 Day Unplanned Readmissions, creating a return ratio of 2.1.

Disparity #2 Race and Ethnicity: White

Population Impact: The race and ethnicity population, White, has a disparity rate of 11% in comparison to the reference range for Hispanic or Latino of 9.7% for All Cause 30 Day Unplanned Readmissions, creating a return ratio of 1.1.

Disparity #3 Age (excluding maternal measures): 50 to 64

Population Impact: Age (excluding maternal measures): 50 to 64, has a disparity rate of 13.0% in comparison to the 65 and older of 12.2%, creating a return ratio of 1.1.

Disparity #4 Expected Payor: Private

Population Impact: The Medicare patient population as a disparity rate of 7.3% in comparison to the reference range of Medicaid with 7.0% for All Cause 30 Day Unplanned Readmissions, creating a return ratio of 1.0.

Disparity #5 Sex Assigned at Birth: Male

Population Impact: The sex assigned at birth: female has a disparity rate of 10.1% in comparison to the reference range of sex assigned at birth: Female of 9.9%, creating a return ratio of 1.0.

Disparity 1-5 Action Plans:

- Risk stratification by disparity shared with the multidisciplinary committees to help target the specific identified disparities within the readmission reduction performance improvement work.
- Discharge planning to include SDOH screening review and provide interventions to help address the health equity barriers identified to the individual patient.
- Rounding prior to patient discharge by the care management team to confirm communication preference prior to disposition for the care transition team needs.
- Follow up appointments made prior to discharge for all high-risk readmission patients within the provider recommended time frame.
- Meds to Beds program exploration and development to address access barriers for high-risk readmission patients.
- Medication delivery options shared as part of the discharge planning that deliver to surrounding

rural communities.

- Follow up calls to help assist with care coordination post disposition are made within 48hrs of discharge for all high-risk readmission patients.

Measurable Objective:

Disparity 1: Reduce All-Cause Unplanned 30-Day Hospital Readmission Disparity Expected Payor: Medicare by 1% within 24 months.

Disparity 2: Reduce All-Cause Unplanned 30-Day Hospital Readmission Disparity Race and Ethnicity: White by 1% within 24 months.

Disparity 3: Reduce All-Cause Unplanned 30-Day Hospital Readmission Disparity Age (excluding maternal measures): 50 to 64 by 1% within 24 months.

Disparity 4: Reduce All-Cause Unplanned 30-Day Hospital Readmission Disparity Expected Payor: Private by 1% within 24 months.

Disparity 5: Reduce All-Cause Unplanned 30-Day Hospital Readmission Disparity Sex Assigned at Birth: Male by 1% within 24 months.

Timeframe: All action plans are in progress with a multidisciplinary committee leading and tracking improvement through the duration of the action plan.

## **Performance in the priority area**

General acute care hospitals are required to provide hospital equity plans that address the top 10 disparities by identifying population impact and providing measurable objectives and specific timeframes. For each disparity, hospital equity plans will address performance across priority areas: person-centered care, patient safety, addressing patient social drivers of health, effective treatment, care coordination, and access to care.

### **Person-centered care**

Adventist Health Tulare recognizes the great importance of patient-centered care and incorporates the individual's goals, concerns, values and right for self-determination within the care planning process. The key performance activities in place to incorporate patient centered care are as follows.

- Collection of social drivers of health data starts at the beginning of a person's hospitalization visit and is incorporated within the patient data profile capture.
- Captured social drivers of health data is reviewed by the discharge planning care management team as part of their discharge planning assessment early in the patient stay. Any needs identified, are given resources to address the patient's specific barriers.
- Multidisciplinary care rounds occur daily at the patient bedside with the care team including, but not limited to, attending care provider, nurses, care management, pharmacy, rehabilitation services, nutrition, wound care, palliative care, and respiratory therapy. This comprehensive team rounding together with the patient allows for open dialogue between the care team and the patient for goals for the daily hospital care while also planning for patients needs when transitioning to their post hospital setting.
- Personalized care planning and discharge planning is tailored to the patients physical, emotional and wellbeing health needs respecting the patients cultural, spiritual and personal preferences.
- Various language interpreter, translation and American Sign Language video services are utilized for communication with the patient based on the identified preferred language assessed from the start of the patient visit. This service reduces any barrier to communication with the patient regarding their care, treatment, and instruction.
- Spiritual support services are provided on-site as well as on-call to meet the individual spiritual and emotional needs of the person including all faith and backgrounds.

- The online Patient Portal is available to the patient during and after their stay allowing for secure access to test results, visit summaries and other records.
- Patient education preferences are assessed and considered with delivery of instruction. The care team utilizes multimodal education including, but not limited to, handouts, verbal, teach-back and digital to best meet the patient's individual needs.
- The patient experience is a priority to the various service lines within the hospital setting. Patient Experience Surveys are sent, collected, analyzed and shared for continued performance improvement activities to improve patient care.

#### Patient safety

As an organization, Adventist Health Tulare consistently strives to achieve high reliability through application of just culture for accountability, implementation of culture of safety, and use of data systems for improved standardization. Safety events are analyzed for improvement opportunities and standardization of process, assessments, and interventions are developed with evidenced based practice with the goal to minimize risk, prevent errors and provide quality of care.

- Harm reduction strategies are a part of the organization systems and processes, and each occurrence is thoroughly reviewed and addressed with the goal to prevent recurrence, including but not limited to, Patient Safety Indicators, Hospital Associated Conditions, medication safety, infection prevention, environment of care, mortality, readmission, and sepsis.
- Organizational quality improvement program is integrated through the hospital services and departments with quality and safety a priority of focus.

#### Addressing patient social drivers of health

Adventist Health Tulare assesses patient's social needs with the disposition planning beginning on arrival to the organization. The data is collected and utilized in the care planning process with early assessment of the patient's potential barriers to care and social determinants of health. Interventions are then applied to help reduce the social barriers to their health and wellbeing with their care transition. The organization has sustained a high assessment participation rate that exceeds the 2024 target.

- Screening of health-related social needs include food insecurity, housing instability, transportation, utilities and safety concerns. These screenings are utilized in the discharge care planning process and appropriate resources given to assist with the patient need.
- A Narcan program that allows free access to lifesaving substance abuse lifesaving agents.
- Substance Use Navigator resources are utilized to see patients with substance abuse needs included but not limited to, in person visits, follow up calls, rehabilitation needs, and community programs for recovery.
- Transition of care visits are arranged with the rural health clinics when patients do not have a primary care provider set up to help address their immediate post discharge care needs and establish care with a provider.
- Resources are provided based on a person's social drivers impacting their health including but not limited to, local and state financial programs in the area, charity care for any healthcare billing support for those who qualify, transportation, church vouchers for hotels, local food banks, meals on wheels, community rehabilitation and recovery services, senior center referrals, durable medical equipment needs, and indigent resource packets. Any safety or security needs are thoroughly assessed with targeted interventions to help support the individual.

### **Performance in the priority area continued**

Performance across all of the following priority areas.

## Effective treatment

Adventist Health Tulare delivers timely and effective evidenced based care. In recognition of our rural health challenges, Adventist Health Tulare has many health services bringing specialty care to an underserved population.

- Sepsis recognition software is utilized in the triage setting to help identify potential sepsis patients for quicker evaluation and standardized treatment.
- Standardized screenings, assessments, and interventions help address the behavioral health concerns that present from the community for treatment.
- Outpatient services prioritize throughput and experience for ease of access and comfortability of the patients served.
- Dialysis services for inpatient and emergency care are made available, a needed service allowing patients to remain close to home for their hospitalized care who require this service.
- SWING services are provided in the hospital Network for non-acute needs when patients need additional rehabilitation prior to their transition to home.
- Surgical services are provided both for scheduled outpatient and emergent needs providing the care needed closer to patient's home communities.
- A variety of Tele-Health services are utilized in both the hospital and outpatient setting to bring specialty services to the communities Adventist Health Tulare serves.

## Care coordination

Adventist Health Tulare supports care coordination ensuring the clinical care teams communicate effectively setting up the patient for a successful care transition from the hospital setting. The efforts taken to coordinate care help improve patient outcomes.

- Prior to patient discharge from the hospital setting, discharge planning is utilized including appointments made prior to discharge based on the provider recommendations according to evidence-based practice.
- After discharge, follow up calls are made to inpatients within 48hrs to address any barriers or questions they may have encountered after leaving the hospital setting.
- Patients who return to the emergency setting also receive follow up calls by the Community Health Manager to help address their social drivers of health and any additional barriers to their healthcare navigation.
- During the hospitalization there is daily multidisciplinary rounding that occurs at the patient bedside allowing for care coordination between the patient and the clinical team.

## Access to care

Adventist Health Tulare provides access to health care services in a rural health setting that has many access-to-care challenges. The services available allow for an underserved population to receive needed healthcare that would otherwise not be attainable.

- There are several Adventist Health Rural Clinics in the communities who serve as primary care for many populations. The clinics also have transition of care appointments available for patients who do not have primary care allowing for their immediate post hospitalization needs to be met while also establishing primary care to serve their ongoing healthcare needs.
- The mobile health clinic is available to serve the rural health communities with primary care access challenges.
- Adventist Health Tulare actively participates and supports several events in the community helping to support wellness, education, while enhancing community engagement and trust.
