

Hospital Equity Measures Report

General Information

Report Type:	Hospital Equity Measures Report
Year:	2024
Hospital Name:	ST. BERNARDINE MEDICAL CENTER
Facility Type:	General Acute Care Hospital
Hospital HCAI ID:	106361339
Report Period:	1/1/2024 - 12/31/2024
Status:	Complete
Due Date:	09/30/2025
Last Updated:	03/13/2026
Hospital Location with Clean Water and Air:	N
Hospital Web Address for Equity Report:	https://tinyurl.com/k6v6h2vf

Overview

Assembly Bill No. 1204 requires the Department of Health Care Access and Information (HCAI) to develop and administer a Hospital Equity Measures Reporting Program to collect and post summaries of key hospital performance and patient outcome data regarding sociodemographic information, including but not limited to age, sex, race/ethnicity, payor type, language, disability status, and sexual orientation and gender identity.

Hospitals (general acute, children's, and acute psychiatric) and hospital systems are required to annually submit their reports to HCAI. These reports contain summaries of each measure, the top 10 disparities, and the equity plans to address the identified disparities. HCAI is required to maintain a link on the HCAI website that provides access to the content of hospital equity measures reports and equity plans to the public. All submitted hospitals are required to post their reports on their websites, as well.

Laws and Regulations

For more information on Assembly Bill No. 1204, please visit the following link by copying and pasting the URL into your web browser:

https://leginfo.legislature.ca.gov/faces/billTextClient.xhtml?bill_id=202120220AB1204

Hospital Equity Measures

Joint Commission Accreditation

General acute care hospitals are required to report three structural measures based on the Commission Accreditation's Health Care Disparities Reduction and Patient-Centered Communication Accreditation Standards. For more information on these measures, please visit the following link by copying and pasting the URL into your web browser:

<https://www.jointcommission.org/standards/r3-report/r3-report-issue-36-new-requirements-to-reduce>

-health-care-disparities/

The first two structural measures are scored as "yes" or "no"; the third structural measure comprises the percentages of patients by five categories of preferred languages spoken, in addition to one other/unknown language category.

Designate an individual to lead hospital health equity activities (Y = Yes, N = No).

Y

Provide documentation of policy prohibiting discrimination (Y = Yes, N = No).

Y

Number of patients that were asked their preferred language, five defined categories and one other/unknown languages category.

86982

Table 1. Summary of preferred languages reported by patients.

Languages	Number of patients who report preferring language	Total number of patients	Percentage of total patients who report preferring language (%)
English Language	72711	86982	83.6
Spanish Language	13682	86982	15.7
Asian Pacific Islander Languages	321	86982	0.4
Middle Eastern Languages	104	86982	0.1
American Sign Language	34	86982	0
Other Languages	97	86982	0.1

Centers for Medicare & Medicaid Services (CMS) Hospital Commitment to Health Equity Structural (HCHE) Measure

There are five domains that make up the CMS Hospital Commitment to HCHE measures. Each domain is scored as "yes" or "no." In order to score "yes," a general acute care hospital is required to confirm all the domain's attestations. Lack of one or more of the attestations results in a score of "no." For more information on the CMS Hospital Commitment to HCHE measures, please visit the following link by copying and pasting the URL into your web browser:

<https://data.cms.gov/provider-data/topics/hospitals/health-equity>

Centers for Medicare & Medicaid Services (CMS) Hospital Commitment to Health Equity Structural (HCHE) Measure Domain 1: Strategic Planning (Yes/No)

- Our hospital strategic plan identifies priority populations who currently experience health disparities.
- Our hospital strategic plan identifies healthcare equity goals and discrete action steps to achieve these goals.
- Our hospital strategic plan outlines specific resources that have been dedicated to achieving our equity goals.
- Our hospital strategic plan describes our approach for engaging key stakeholders, such as community-based organizations.

Y

CMS HCHE Measure Domain 2: Data Collection (Yes/No)

- Our hospital strategic plan identifies healthcare equity goals and discrete action steps to achieve these goals.

- Our hospital has training for staff in culturally sensitive collection of demographics and/or social determinant of health information.
- Our hospital inputs demographic and/or social determinant of health information collected from patients into structured, interoperable data elements using a certified electronic health record (EHR) technology.

Y

CMS HCHE Measure Domain 3: Data Analysis (Yes/No)

- Our hospital stratifies key performance indicators by demographic and/or social determinants of health variables to identify equity gaps and includes this information in hospital performance dashboards.

Y

CMS HCHE Measure Domain 4: Quality Improvement (Yes/No)

- Our hospital participates in local, regional or national quality improvement activities focused on reducing health disparities.

Y

CMS HCHE Measure Domain 5: Leadership Engagement (Yes/No)

- Our hospital senior leadership, including chief executives and the entire hospital board of trustees, annually reviews our strategic plan for achieving health equity.
- Our hospital senior leadership, including chief executives and the entire hospital board of trustees, annually review key performance indicators stratified by demographic and/or social factors.

Y

Centers for Medicare & Medicaid Services (CMS) Social Drivers of Health (SDOH)

General acute care hospitals are required to report on rates of screenings and intervention rates among patients above 18 years old for five health related social needs (HRSN), which are food insecurity, housing instability, transportation problems, utility difficulties, and interpersonal safety. These rates are reported separately as being screened as positive for any of the five HRSNs, positive for each individual HRSN, and the intervention rate for each positively screened HRSN. For more information on the CMS SDOH, please visit the following link by copying and pasting the URL into your web browser:

<https://www.cms.gov/priorities/innovation/key-concepts/social-drivers-health-and-health-related-social-needs>

Number of patients admitted to an inpatient hospital stay who are 18 years or older on the date of admission and are screened for all of the five HRSN

7757

Total number of patients who are admitted to a hospital inpatient stay and who are 18 years or older on the date of admission

9938

Rate of patients admitted for an inpatient hospital stay who are 18 years or older on the date of admission, were screened for an HRSN, and who screened positive for one or more of the HRSNs

78.1

Table 2. Positive screening rates and intervention rates for the five Health Related Social Needs of the Centers of Medicare & Medicaid Services (CMS) Social Drivers of Health (SDOH).

Social Driver of Health	Number of positive screenings	Rate of positive screenings (%)	Number of positive screenings who received intervention	Rate of positive screenings who received intervention (%)
Food Insecurity	692	8.9	0	
Housing Instability	322	4.2	0	
Transportation Problems	1124	14.5	0	
Utility Difficulties	447	5.8	0	
Interpersonal Safety	184	2.4	0	

Core Quality Measures for General Acute Care Hospitals

There are two quality measures from the Hospital Consumer Assessment of Healthcare Providers and Systems (HCAHPS) survey. For more information on the HCAHPS survey, please visit the following link by copying and pasting the URL into your web browser:

<https://hcahpsonline.org/en/survey-instruments/>

Patient Recommends Hospital

The first HCAHPS quality measure is the percentage of patients who would recommend the hospital to friends and family. For this measure, general acute care hospitals provide the percentage of patient respondents who responded "probably yes" or "definitely yes" to whether they would recommend the hospital, the percentage of the people who responded to the survey (i.e., the response rate), and the inputs for the percentages. The percentages and inputs are stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding HCAHPS question number is 19.

Number of respondents who replied "probably yes" or "definitely yes" to HCAHPS Question 19, "Would you recommend this hospital to your friends and family?"

611

Total number of respondents to HCAHPS Question 19

664

Percentage of total respondents who responded "probably yes" or "definitely yes" to HCAHPS Question 19

92

Total number of people surveyed on HCAHPS Question 19

5533

Response rate, or the percentage of people who responded to HCAHPS Question 19

12

Table 3. Patient recommends hospital by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

Race and/or Ethnicity	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
American Indian or Alaska Native					
Asian					
Black or African American					
Hispanic or Latino					
Middle Eastern or North African					
Multiracial and/or Multiethnic (two or more races)					
Native Hawaiian or Pacific Islander					
White					

Age	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Age < 18					
Age 18 to 34					
Age 35 to 49					
Age 50 to 64					
Age 65 Years and Older					

Sex assigned at birth	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Female					
Male					
Unknown					

Payer Type	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Medicare					
Medicaid					
Private					
Self-Pay					
Other					

Preferred Language	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
English Language					
Spanish Language					
Asian Pacific Islander Languages					
Middle Eastern Languages					
American Sign Language					
Other/Unknown Languages					

Disability Status	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Does not have a disability					
Has a mobility disability					
Has a cognition disability					
Has a hearing disability					
Has a vision disability					
Has a self-care disability					
Has an independent living disability					

Sexual Orientation	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Lesbian, gay or homosexual					
Straight or heterosexual					
Bisexual					
Something else

Not disclosed					

Gender Identity	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Female					
Female-to-male (FTM)/ transgender male/trans man					
Male					
Male-to-female (MTF)/ transgender female/trans woman					
Non-conforming gender					
Additional gender category or other					
Not disclosed					

Patient Received Information in Writing

The second HCAHPS quality measure is the percentage of patients who reported receiving information in writing on symptoms and health problems to look out for after leaving the hospital. General acute care hospitals are required to provide the percentage of patient respondents who responded "yes" to being provided written information, the percentage of the people who responded to the survey (i.e., the response rate), and the inputs for these percentages. These percentages and inputs are stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding HCAHPS question number is 17.

Number of respondents who replied "yes" to HCAHPS Question 17, "During this hospital stay, did you get information in writing about what symptoms or health problems to look out for after you left the

hospital?"

558

Total number of respondents to HCAHPS Question 17

664

Percentage of respondents who responded "yes" to HCAHPS Question 17

84

Total number of people surveyed on HCAHPS Question 17

5533

Response rate, or the percentage of people who responded to HCAHPS Question 17

12

Table 4. Patient reports receiving information in writing about symptoms or health problems by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

Race and/or Ethnicity	Number of "yes" responses	Total number of responses	Percentage of "yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)

Agency for Healthcare Research and Quality (AHRQ) Indicators

General acute care hospitals are required to report on two indicators from the Agency for Healthcare Research and Quality (AHRQ). For general information about AHRQ indicators, please visit the following link by copying and pasting the URL into your web browser:

<https://qualityindicators.ahrq.gov/>

Pneumonia Mortality Rate

The Pneumonia Mortality Rate is defined as the rate of in-hospital deaths per 1,000 hospital discharges with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission for patients ages 18 years and older. General acute care hospitals report the Pneumonia Mortality Rate by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding AHRQ Inpatient Quality Indicator is 20. For more information about this indicator, please visit the following link by copying and pasting the URL into your web browser:

https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_20_Pneumonia_Mortality_Rate.pdf

Number of in-hospital deaths with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission

35

Total number of hospital discharges with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission

586

Rate of in-hospital deaths per 1,000 hospital discharges with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission

59.7

Death Rate among Surgical Inpatients with Serious Treatable Complications

The Death Rate among Surgical Inpatients with Serious Treatable Complications is defined as the rate of in-hospital deaths per 1,000 surgical discharges among patients ages 18-89 years old or obstetric patients with serious treatable complications. General acute care hospitals report this measure by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding AHRQ Patient Safety Indicator is 04. For more information about this indicator, please visit the following link by copying and pasting the URL into your web browser:
https://qualityindicators.ahrq.gov/Downloads/Modules/PSI/V2023/TechSpecs/PSI_04_Death_Rate_among_Surgical_Inpatients_with_Serious_Treatable_Complications.pdf

California Maternal Quality Care Collaborative (CMQCC) Core Quality Measures

There are three core quality maternal measures adopted from the California Maternal Quality Care Collaborative (CMQCC).

CMQCC Nulliparous, Term, Singleton, Vertex (NTSV) Cesarean Birth Rate

The CMQCC Nulliparous, Term, Singleton, Vertex (NTSV) Cesarean Birth Rate is defined as nulliparous women with a term (at least 37 weeks gestation), singleton baby in a vertex position delivered by cesarian birth. General acute care hospitals report the NTSV Cesarean Birth Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. For more information, please visit the following link by copying and pasting the URL into your web browser:

<https://www.cmqcc.org/quality-improvement-toolkits/supporting-vaginal-birth/ntsv-cesarean-birth-measure-specifications>

Number of NTSV patients with Cesarean deliveries

CMQCC Vaginal Birth After Cesarean (VBAC) Rate

The CMQCC Vaginal Birth After Cesarean (VBAC) Rate is defined as vaginal births per 1,000 deliveries by patients with previous Cesarean deliveries. General acute care hospitals report the VBAC Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The VBAC Rate uses the specifications of AHRQ Inpatient Quality Indicator 22. For more information, please visit the following link by copying and pasting the URL into your web browser:

[https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_22_Vaginal_Birth_After_Cesarean_\(VBAC\)_Delivery_Rate_Uncomplicated.pdf](https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_22_Vaginal_Birth_After_Cesarean_(VBAC)_Delivery_Rate_Uncomplicated.pdf)

Number of vaginal delivery among cases with previous Cesarean delivery that meet the inclusion and exclusion criteria

CMQCC Exclusive Breast Milk Feeding Rate

The CMQCC Exclusive Breast Milk Feeding Rate is defined as the newborns per 100 who reached at least 37 weeks of gestation (or 3000g if gestational age is missing) who received breast milk

exclusively during their stay at the hospital. Other criteria are that the newborns did not go to the neonatal intensive care unit (NICU), transfer, or die, did not reflect multiple gestation, and did not have codes for parenteral nutrition or galactosemia. General acute care hospitals report the Exclusive Breast Milk Feeding Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The CMQCC Exclusive Breast Milk Feeding Rate uses the Joint Commission National Quality Measure PC-05. For more information, please visit the following link by copying and pasting the URL into your web browser:
<https://manual.jointcommission.org/releases/TJC2024B/MIF0170.html>

Number of newborn cases that were exclusively fed breast milk during their hospital stay and meet the inclusion and exclusion criteria

108

HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate

General acute care hospitals are required to report several HCAI All-Cause Unplanned 30-Day Hospital Readmission Rates, which are broadly defined as the percentage of hospital-level, unplanned, all-cause readmissions after admission for eligible conditions within 30 days of hospital discharge for patients aged 18 years and older. These rates are first stratified based on any eligible condition, mental health disorders, substance use disorders, co-occurring disorders, and no behavioral health diagnosis. Then, each condition-stratified hospital readmission rate is further stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. For more information on the HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate, please visit the following link by copying and pasting the URL into your web browser:

https://hcai.ca.gov/wp-content/uploads/2024/10/HCAI-All-Cause-Readmission-Rate-Exclusions_ADA.pdf

HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate – Any Eligible Condition

Number of inpatient hospital admissions which occurs within 30 days of the discharge date of an eligible index admission and were 18 years or older at time of admission

1936

Total number of patients who were admitted to the general acute care hospital and were 18 years or older at time of admission

11719

Rate of hospital-level, unplanned, all-cause readmissions after admission for any eligible condition

within 30 days of hospital discharge for patients aged 18 and older

16.5

Table 10. HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate for any eligible condition by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

Health Equity Plan

All general acute care hospitals report a health equity plan that identifies the top 10 disparities and a written plan to address them.

Top 10 Disparities

Disparities for each hospital equity measure are identified by comparing the rate ratios by stratification groups. Rate ratios are calculated differently for measures with preferred low rates and those with preferred high rates. Rate ratios are calculated after applying the California Health and Human Services Agency's "Data De-Identification Guidelines (DDG)," dated September 23, 2016.

Table 15. Top 10 disparities and their rate ratio values.

Measures	Stratifications	Stratification Group	Stratification Rate	Reference Group	Reference Rate	Rate Ratio
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Race and/or Ethnicity	Multiracial and/or Multiethnic (two or more races)	24.1	Asian	11.1	2.2
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Age (excluding maternal measures)	50 to 64	19	18 to 34	9.2	2.1
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Age (excluding maternal measures)	65 and older	18.6	18 to 34	9.2	2
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Expected Payor	Medicare	19.4	Private	9.6	2
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Expected Payor	Medicaid	15.8	Private	9.6	1.6
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Race and/or Ethnicity	Black or African American	18.2	Asian	11.1	1.6
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Age (excluding maternal measures)	35 to 49	14.3	18 to 34	9.2	1.6
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Race and/or Ethnicity	White	16.4	Asian	11.1	1.5
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Race and/or Ethnicity	Hispanic or Latino	15.8	Asian	11.1	1.4
AHRQ Patient Safety Indicator Death Rate among Surgical Inpatients with Serious Treatable Complications	Sex Assigned at Birth	Female	217.4	Male	156.6	1.4

Plan to address disparities identified in the data

Disparity 1, 6, 8, 9: Unplanned 30-Day Readmitted Rate by Race

Analysis: In 2024, Blacks/ African Americans, Whites, Hispanics/ Latinos, and multiracial and/or multiethnic patient readmissions are higher than rates for Asians.

Actions Planned:

- Implement post-discharge phone calls within 2-3 days of discharge and refer eligible discharged patients to local primary care facilities for follow up (i.e. SBMC Transitional Care Clinic, FQHC)
- Develop culturally and linguistically educational materials for patients and support partners.
- Collaborate with community and providers to support patients post-discharge.
- Monitor readmission rates by disparity group, analyze root causes, and adjust interventions based on ongoing data (i.e. SBMC readmission taskforce, utilization management).
- Provide ongoing training to all staff (in person or electronically) on cultural competency, health literacy, effective communication, and patient-centered care.

Measurable Objectives: Reduce 30-day readmission rate ratio for Blacks/ African Americans, Whites, Hispanics/ Latinos, and multiracial and/or multiethnic patients by 1 %.

Timeframe: Launch by Q1 2026, reassess Q2 2026.

Disparity 2, 3, 7: Unplanned 30-Day Readmitted Rate by Age 35 and Older

Data Analysis:

Age 35 and older patient group readmissions are higher overall than the 18-34 age related disparity group.

Actions Planned:

- Implement structured post-discharge phone calls within 2-3 days of discharge and refer eligible discharged patients to local primary care facilities for follow up care (i.e. SBMC Transitional Care

Clinic, FQHC)

- Develop culturally and linguistically educational materials for patients and support partners.
- Collaborate with community partners and providers (e.g., home health, social services) to support patients post-discharge.
- Monitor readmission rates by disparity group, analyze root causes, and adjust interventions based on ongoing data (i.e. SBMC readmission taskforce, utilization management).
- Provide ongoing training to all staff (in person or electronically) on cultural competency, health literacy, effective communication, and patient-centered care.

Measurable Objectives: Reduce 30-day readmission rate ratio for ages 35+ by 1%.

Timeframe: Launch by Q2 2025, reassess Q2 2026.

Disparity 4 and 5: Unplanned 30-Day Hospital Readmission Rate by Expected Payor

Data Analysis:

In 2024, Medicaid and Medicare recipients experienced a higher 30 day readmission rate than those with private insurance.

Actions Planned:

- Implement structured post-discharge phone calls within 2-3 days of discharge and refer eligible discharged patients to local primary care facilities for follow up care (i.e. SBMC Transitional Care Clinic, FQHC)
- Develop culturally and linguistically appropriate educational materials and engage patients/ caregivers in shared decision-making.
- Collaborate with community partners and providers (e.g., home health, social services) to support patients post-discharge.
- Monitor readmission rates by disparity group, analyze root causes, and adjust interventions based on ongoing data (i.e. SBMC readmission taskforce, utilization management).
- Provide ongoing training to all staff (in person or electronically) on cultural competency, health literacy, effective communication, and patient-centered care.

Measurable Objectives: Reduce Medicare readmission rate by 1% within 24 months (07/2025-06/2027).

Timeframe: Implement by Q2 2026; evaluate biannually.

Disparity 10: Death Rate among Surgical Inpatients with Serious Treatable Complications

Data Analysis:

In 2024, the death rates among surgical inpatients with serious treatable complications was higher for females than males.

Actions Planned:

- Implement structured post-discharge phone calls within 2-3 days of discharge and refer eligible discharged patients to local primary care facilities for follow up care (i.e. SBMC Transitional Care Clinic, FQHC)
- Develop culturally and linguistically educational materials for patients and support partners.
- Collaborate with community organizations, primary care providers, and specialized services (e.g., home health, social services) to support patients post-discharge.
- Continuously monitor readmission rates by disparity group, analyze root causes, and adjust interventions based on ongoing data (i.e. SBMC readmission taskforce, utilization management).
- Provide ongoing training to all staff (in person or electronically) on cultural competency, health literacy, effective communication, and patient-centered care.

Measurable Objectives: Reduce the disparity rate by 1% within 24 months.

Timeframe: Implement in Q1 2026, review biannually.

Performance in the priority area

General acute care hospitals are required to provide hospital equity plans that address the top 10 disparities by identifying population impact and providing measurable objectives and specific timeframes. For each disparity, hospital equity plans will address performance across priority areas: person-centered care, patient safety, addressing patient social drivers of health, effective treatment, care coordination, and access to care.

Person-centered care

Person-centered care, a cornerstone of modern healthcare, partners providers with patients, ensuring patients feel heard, understood, and empowered to manage their health. By prioritizing unique patient needs, we cultivate trust and respect. This commitment translates into two strategic pillars:

- **Shared Decision-Making:** Moving beyond traditional models, this involves patients in every health decision. Medical information is presented clearly, allowing patients to grasp diagnoses, treatment options, risks, and benefits. Patient values, lifestyle, and preferences guide treatment plan development, ensuring clinically sound, personally resonant, and sustainable care.
- **Continuity of Care:** This creates a seamless patient experience through consistent care delivery across all touchpoints. Fostering strong relationships between patients and their care teams builds trust and minimizes fragmentation, ensuring timely follow-up, updated records, and smooth transitions between settings.

Beyond these, effective communication is an indispensable element for safe, high-quality, and equitable healthcare. We value and respect individual beliefs, cultural backgrounds, and personal values, treating everyone with dignity, compassion, and respect, while diligently safeguarding patient privacy. To support these principles and ensure universal access, we provide:

- **Interpreter Services:** Professional services bridge language barriers for non-English speaking patients, ensuring clear communication, understanding of medical conditions, and preventing misunderstandings.
- **Translation of Health Materials:** Vital health education materials, consent forms, and discharge instructions are translated into multiple languages, enabling diverse communities to understand essential information at their own pace.
- **Bilingual Staff:** Bilingual staff across departments enhance direct and culturally sensitive interactions, facilitating communication and creating a welcoming environment.

These resources are vital for patients, especially those with limited health literacy or diverse linguistic backgrounds, to actively participate in health decisions. By removing barriers to understanding and fostering clear, empathetic communication, we empower every patient to be a true partner in their well-being, leading to better adherence, improved health outcomes, and a more positive healthcare experience.

Patient safety

St. Bernardine Medical Center prioritizes safe, high-quality, equitable care for all patients. We proactively use data to identify and address inequities affecting vulnerable populations, embedding health equity into our patient safety work for measurable improvements. Utilizing the High Reliability Organization (HRO) model, we operate safely in high-risk environments, fostering a culture where errors are quickly identified and addressed.

Safety events are investigated with an equity lens using Event Investigation & Analysis (Root Cause Analysis/EIA), exploring systemic inequities and social determinants of health. Patient safety initiatives are designed with diverse patient needs in mind, incorporating community and patient input.

We are dedicated to continuous learning and improvement in patient safety equity, adapting

strategies based on new data, research, and community feedback. Transparent sharing of successes and challenges demonstrates accountability, fostering a highly reliable environment focused on equitable outcomes and ensuring the highest standards of safety and care for all patients.

Addressing patient social drivers of health

SBMC is addressing the following significant health needs in the 2022 CHNA: Access to Care, Birth Indicators, Behavioral Health (Substance Use & Mental Health), Chronic Diseases including Overweight and Obesity, Housing and Homelessness, Preventative Practices, and Safety and Violence Prevention. SBMC will take several actions and dedicate resources to these needs by providing the following programming and/or resources: (1) financial assistance, (2) community health navigation services, (3) community health education, (4) maternal child health support, (5) Transitional Care Navigation, (6) investment in local community partner agencies through the Community Health Improvement Grants program, (7) Graduate Medical Education program, (8) behavioral health and substance abuse navigation, (8) youth programming at the Family Focus Center, and (9) in-person and virtual support groups (bariatric, postpartum, and bereavement support groups). Moreover, in 2024, SBMC completed social determinants of health screening for 78% of adult inpatients in the domains of housing, food, utilities, transportation, and interpersonal safety. That value has since improved to 95% in 2025.

SBMC remains committed to reducing preventable hospital readmissions contributing to 90% of our top 10 disparities. We aim to achieve this by implementing evidence-based, patient-centered interventions that acknowledge the significant impact of social and structural barriers on our vulnerable patient population. Our objective is to ensure that all patients, regardless of race, income, language, or housing status, receive equitable care during their transition from hospital to disposition.

To address healthcare disparities, we have adopted several key strategies:

- **Utilization of Transitional Care Clinic:** These clinics serve as a crucial link for high-risk patients between hospital discharge and primary care. They focus on educating patients managing multiple chronic conditions, reconciling medications, and reinforcing discharge instructions. By incorporating culturally appropriate communication and interpreter services, we aim to mitigate barriers that underserved populations may encounter in understanding their treatment plans.
- **Follow-up Discharge Phone Calls:** Within 48-72 hours of discharge, personalized phone calls are made by hospital staff to high-risk patients. These calls ensure that patient concerns, including medication questions and discharge instructions, are addressed, and any social needs are identified.
- **Community Resource Linkage:** During hospitalization, if social barriers are identified, patients are connected with community-based resources to reduce the risk of readmission.
- **Redesign of the Readmissions Steering Committee:** Our hospital's Readmissions Steering Committee has been restructured to include our Health Equity Lead, Substance Use Navigator, and Mission Services. This interdisciplinary approach aims to bridge gaps in patient needs by offering community resources, reviewing data to identify potential needs, and developing strategies to connect patients with appropriate support.

Performance in the priority area continued

Performance across all of the following priority areas.

Effective treatment

At St. Bernardine Medical Center (SBMC), we prioritize safe, effective, and equitable patient care,

continually refining evidence-based practices to improve outcomes and reduce mortality. We use a holistic approach, addressing social determinants of health through key initiatives. Our transitional care clinic supports high-risk patients post-discharge, preventing readmissions and ensuring continuity. Our Electronic Health Record (EHR) system captures demographic and social needs data, enabling tailored interventions. A multidisciplinary team connects patients to essential community resources. We provide multi-language, multi-format health literacy education with professional interpreters and community programs, empowering patients to manage their health.

Care coordination

SBMC is building equity into clinical decision support by incorporating diverse data, including social determinants of health (SDOH) and patient preferences, into the design and evaluation of algorithms. Key strategies include using balanced datasets that accurately represent diverse populations, incorporating patient-centered decision aids, applying equity-focused algorithms to mitigate bias, and involving diverse stakeholders in the development process. SBMC ensures smooth transitions (e.g., hospital to home) for diverse populations by linking patients to care post discharge. Utilizing social workers, care coordinators, patient navigators, and community health workers, discharged patients receive referrals to local healthcare providers and facilities for timely follow up, housing and homelessness support, social service connections, and no cost transportation vouchers. Additionally, Patient navigators and community health workers provide timely, appropriate, and coordinated care connecting patients to essential social services including substance abuse support, health education, and community programs to support their overall well-being.

Access to care

Patients and community residents within the SBMC service area have reported increased difficulty in accessing care due to barriers including: difficulty identifying providers, provider shortage, transportation, financial constraints, etc. SBMC is addressing the following significant health needs in the 2022 CHNA: Access to Care, Birth Indicators, Behavioral Health (Substance Use & Mental Health), Chronic Diseases including Overweight and Obesity, Housing and Homelessness, Preventative Practices, and Safety and Violence Prevention. SBMC will take several actions and dedicate resources to these needs by providing the following programming and/or resources: financial assistance, community health navigation services/ substance abuse navigation, community health education, education and resources for babies and families, assistance to discharged patients to identify and secure a medical home (Transitional Care Clinic), investment in local community partner agencies through the Community Health Improvement Grants program, Graduate Medical Education program, behavioral health and substance abuse navigation, youth programming at the Family Focus Center, and in-person and virtual support groups (bariatric, postpartum, and bereavement support groups). Two patient navigators and one community health worker are staffed to provide additional support for those inpatient and discharged to further increase access to care and reduce unplanned 30 day readmission rates. Two lactation educators will outreach to new and expectant women and their care partners to increase positive maternal child health outcomes and increase access to care.

Additionally to further address healthcare disparities, we have adopted several key strategies:

- Utilization of Transitional Care Clinic: These clinics serve as a crucial link for high-risk patients between hospital discharge and primary care. They focus on educating patients managing multiple chronic conditions, reconciling medications, and reinforcing discharge instructions. By incorporating culturally appropriate communication and interpreter services, we aim to mitigate barriers that underserved populations may encounter in understanding their treatment plans.
- Follow-up Discharge Phone Calls: Within 48-72 hours of discharge, personalized phone calls are made by hospital staff to high-risk patients. These calls ensure that patient concerns, including

medication questions and discharge instructions, are addressed, and any social needs are identified.

- Community Resource Linkage: During hospitalization, if social barriers are identified, patients are connected with community-based resources to reduce the risk of readmission.
- Redesign of the Readmissions Steering Committee: Our hospital's Readmissions Steering Committee has been restructured to include our Health Equity Lead, Substance Use Navigator, and Mission Services. This interdisciplinary approach aims to bridge gaps in patient needs by offering community resources, reviewing data to identify potential needs, and developing strategies to connect patients with appropriate support.

Methodology Guidelines

Did the hospital follow the methodology in the Measures Submission Guide? (Y/N)
