

Hospital Equity Measures Report

General Information

Report Type:	Hospital Equity Measures Report
Year:	2024
Hospital Name:	GOLETA VALLEY COTTAGE HOSPITAL
Facility Type:	General Acute Care Hospital
Hospital HCAI ID:	106420483
Report Period:	01/01/2024 - 12/31/2024
Status:	Complete
Due Date:	09/30/2025
Last Updated:	03/16/2026
Hospital Location with Clean Water and Air:	Y
Hospital Web Address for Equity Report:	https://www.cottagehealth.org/

Overview

Assembly Bill No. 1204 requires the Department of Health Care Access and Information (HCAI) to develop and administer a Hospital Equity Measures Reporting Program to collect and post summaries of key hospital performance and patient outcome data regarding sociodemographic information, including but not limited to age, sex, race/ethnicity, payor type, language, disability status, and sexual orientation and gender identity.

Hospitals (general acute, children's, and acute psychiatric) and hospital systems are required to annually submit their reports to HCAI. These reports contain summaries of each measure, the top 10 disparities, and the equity plans to address the identified disparities. HCAI is required to maintain a link on the HCAI website that provides access to the content of hospital equity measures reports and equity plans to the public. All submitted hospitals are required to post their reports on their websites, as well.

Laws and Regulations

For more information on Assembly Bill No. 1204, please visit the following link by copying and pasting the URL into your web browser:

https://leginfo.legislature.ca.gov/faces/billTextClient.xhtml?bill_id=202120220AB1204

Hospital Equity Measures

Joint Commission Accreditation

General acute care hospitals are required to report three structural measures based on the Commission Accreditation's Health Care Disparities Reduction and Patient-Centered Communication Accreditation Standards. For more information on these measures, please visit the following link by copying and pasting the URL into your web browser:

<https://www.jointcommission.org/standards/r3-report/r3-report-issue-36-new-requirements-to-reduce>

-health-care-disparities/

The first two structural measures are scored as "yes" or "no"; the third structural measure comprises the percentages of patients by five categories of preferred languages spoken, in addition to one other/unknown language category.

Designate an individual to lead hospital health equity activities (Y = Yes, N = No).

Y

Provide documentation of policy prohibiting discrimination (Y = Yes, N = No).

Y

Number of patients that were asked their preferred language, five defined categories and one other/unknown languages category.

28745

Table 1. Summary of preferred languages reported by patients.

Languages	Number of patients who report preferring language	Total number of patients	Percentage of total patients who report preferring language (%)
English Language	25357	28745	88.2
Spanish Language	3105	28745	10.8
Asian Pacific Islander Languages	97	28745	0.3
Middle Eastern Languages	29	28745	0.1
American Sign Language		28745	
Other Languages	157	28745	0.5

Centers for Medicare & Medicaid Services (CMS) Hospital Commitment to Health Equity Structural (HCHE) Measure

There are five domains that make up the CMS Hospital Commitment to HCHE measures. Each domain is scored as "yes" or "no." In order to score "yes," a general acute care hospital is required to confirm all the domain's attestations. Lack of one or more of the attestations results in a score of "no." For more information on the CMS Hospital Commitment to HCHE measures, please visit the following link by copying and pasting the URL into your web browser:

<https://data.cms.gov/provider-data/topics/hospitals/health-equity>

Centers for Medicare & Medicaid Services (CMS) Hospital Commitment to Health Equity Structural (HCHE) Measure Domain 1: Strategic Planning (Yes/No)

- Our hospital strategic plan identifies priority populations who currently experience health disparities.
- Our hospital strategic plan identifies healthcare equity goals and discrete action steps to achieve these goals.
- Our hospital strategic plan outlines specific resources that have been dedicated to achieving our equity goals.
- Our hospital strategic plan describes our approach for engaging key stakeholders, such as community-based organizations.

Y

CMS HCHE Measure Domain 2: Data Collection (Yes/No)

- Our hospital strategic plan identifies healthcare equity goals and discrete action steps to achieve these goals.

- Our hospital has training for staff in culturally sensitive collection of demographics and/or social determinant of health information.
- Our hospital inputs demographic and/or social determinant of health information collected from patients into structured, interoperable data elements using a certified electronic health record (EHR) technology.

Y

CMS HCHE Measure Domain 3: Data Analysis (Yes/No)

- Our hospital stratifies key performance indicators by demographic and/or social determinants of health variables to identify equity gaps and includes this information in hospital performance dashboards.

Y

CMS HCHE Measure Domain 4: Quality Improvement (Yes/No)

- Our hospital participates in local, regional or national quality improvement activities focused on reducing health disparities.

Y

CMS HCHE Measure Domain 5: Leadership Engagement (Yes/No)

- Our hospital senior leadership, including chief executives and the entire hospital board of trustees, annually reviews our strategic plan for achieving health equity.
- Our hospital senior leadership, including chief executives and the entire hospital board of trustees, annually review key performance indicators stratified by demographic and/or social factors.

Y

Centers for Medicare & Medicaid Services (CMS) Social Drivers of Health (SDOH)

General acute care hospitals are required to report on rates of screenings and intervention rates among patients above 18 years old for five health related social needs (HRSN), which are food insecurity, housing instability, transportation problems, utility difficulties, and interpersonal safety. These rates are reported separately as being screened as positive for any of the five HRSNs, positive for each individual HRSN, and the intervention rate for each positively screened HRSN. For more information on the CMS SDOH, please visit the following link by copying and pasting the URL into your web browser:

<https://www.cms.gov/priorities/innovation/key-concepts/social-drivers-health-and-health-related-social-needs>

Number of patients admitted to an inpatient hospital stay who are 18 years or older on the date of admission and are screened for all of the five HRSN

394

Total number of patients who are admitted to a hospital inpatient stay and who are 18 years or older on the date of admission

727

Rate of patients admitted for an inpatient hospital stay who are 18 years or older on the date of admission, were screened for an HRSN, and who screened positive for one or more of the HRSNs

54.2

Table 2. Positive screening rates and intervention rates for the five Health Related Social Needs of the Centers of Medicare & Medicaid Services (CMS) Social Drivers of Health (SDOH).

Social Driver of Health	Number of positive screenings	Rate of positive screenings (%)	Number of positive screenings who received intervention	Rate of positive screenings who received intervention (%)
Food Insecurity	19	4.8	suppressed	suppressed
Housing Instability	15	3.8	suppressed	suppressed
Transportation Problems	17	4.3	suppressed	suppressed
Utility Difficulties	suppressed	suppressed	suppressed	suppressed
Interpersonal Safety	suppressed	suppressed	suppressed	suppressed

Core Quality Measures for General Acute Care Hospitals

There are two quality measures from the Hospital Consumer Assessment of Healthcare Providers and Systems (HCAHPS) survey. For more information on the HCAHPS survey, please visit the following link by copying and pasting the URL into your web browser:

<https://hcahpsonline.org/en/survey-instruments/>

Patient Recommends Hospital

The first HCAHPS quality measure is the percentage of patients who would recommend the hospital to friends and family. For this measure, general acute care hospitals provide the percentage of patient respondents who responded "probably yes" or "definitely yes" to whether they would recommend the hospital, the percentage of the people who responded to the survey (i.e., the response rate), and the inputs for the percentages. The percentages and inputs are stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding HCAHPS question number is 19.

Number of respondents who replied "probably yes" or "definitely yes" to HCAHPS Question 19, "Would you recommend this hospital to your friends and family?"

215

Total number of respondents to HCAHPS Question 19

219

Percentage of total respondents who responded "probably yes" or "definitely yes" to HCAHPS Question 19

98.2

Total number of people surveyed on HCAHPS Question 19

664

Response rate, or the percentage of people who responded to HCAHPS Question 19

33.0

Table 3. Patient recommends hospital by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

Race and/or Ethnicity	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
American Indian or Alaska Native					
Asian					
Black or African American					
Hispanic or Latino					
Middle Eastern or North African					
Multiracial and/or Multiethnic (two or more races)					
Native Hawaiian or Pacific Islander					
White					

Age	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Age < 18					
Age 18 to 34					
Age 35 to 49					
Age 50 to 64					
Age 65 Years and Older					

Sex assigned at birth	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Female					
Male					
Unknown					

Payer Type	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Medicare					
Medicaid					
Private					
Self-Pay					
Other					

Preferred Language	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
English Language					
Spanish Language					
Asian Pacific Islander Languages					
Middle Eastern Languages					
American Sign Language					
Other/Unknown Languages					

Disability Status	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Does not have a disability					
Has a mobility disability					
Has a cognition disability					
Has a hearing disability					
Has a vision disability					
Has a self-care disability					
Has an independent living disability					

Sexual Orientation	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Lesbian, gay or homosexual					
Straight or heterosexual					
Bisexual

Gender Identity	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Female					
Female-to-male (FTM)/ transgender male/trans man					
Male					
Male-to-female (MTF)/ transgender female/trans woman					
Non-conforming gender					
Additional gender category or other					
Not disclosed					

Patient Received Information in Writing

The second HCAHPS quality measure is the percentage of patients who reported receiving information in writing on symptoms and health problems to look out for after leaving the hospital. General acute care hospitals are required to provide the percentage of patient respondents who responded "yes" to being provided written information, the percentage of the people who responded to the survey (i.e., the response rate), and the inputs for these percentages. These percentages and inputs are stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding HCAHPS question number is 17.

Number of respondents who replied "yes" to HCAHPS Question 17, "During this hospital stay, did you get information in writing about what symptoms or health problems to look out for after you left the

hospital?"

193

Total number of respondents to HCAHPS Question 17

219

Percentage of respondents who responded "yes" to HCAHPS Question 17

88.1

Total number of people surveyed on HCAHPS Question 17

664

Response rate, or the percentage of people who responded to HCAHPS Question 17

33.0

Table 4. Patient reports receiving information in writing about symptoms or health problems by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

Race and/or Ethnicity	Number of "yes" responses	Total number of responses	Percentage of "yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)

Agency for Healthcare Research and Quality (AHRQ) Indicators

General acute care hospitals are required to report on two indicators from the Agency for Healthcare Research and Quality (AHRQ). For general information about AHRQ indicators, please visit the following link by copying and pasting the URL into your web browser:

<https://qualityindicators.ahrq.gov/>

Pneumonia Mortality Rate

The Pneumonia Mortality Rate is defined as the rate of in-hospital deaths per 1,000 hospital discharges with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission for patients ages 18 years and older. General acute care hospitals report the Pneumonia Mortality Rate by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding AHRQ Inpatient Quality Indicator is 20. For more information about this indicator, please visit the following link by copying and pasting the URL into your web browser:

https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_20_Pneumonia_Mortality_Rate.pdf

Death Rate among Surgical Inpatients with Serious Treatable Complications

The Death Rate among Surgical Inpatients with Serious Treatable Complications is defined as the rate of in-hospital deaths per 1,000 surgical discharges among patients ages 18-89 years old or obstetric patients with serious treatable complications. General acute care hospitals report this measure by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding AHRQ Patient Safety Indicator is 04. For more information about this indicator, please visit the following link by copying and pasting the URL into your web browser:

California Maternal Quality Care Collaborative (CMQCC) Core Quality Measures

There are three core quality maternal measures adopted from the California Maternal Quality Care Collaborative (CMQCC).

CMQCC Nulliparous, Term, Singleton, Vertex (NTSV) Cesarean Birth Rate

The CMQCC Nulliparous, Term, Singleton, Vertex (NTSV) Cesarean Birth Rate is defined as nulliparous women with a term (at least 37 weeks gestation), singleton baby in a vertex position delivered by cesarian birth. General acute care hospitals report the NTSV Cesarean Birth Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. For more information, please visit the following link by copying and pasting the URL into your web browser:

<https://www.cmqcc.org/quality-improvement-toolkits/supporting-vaginal-birth/ntsv-cesarean-birth-measure-specifications>

Additional gender category or other			
Not disclosed			

CMQCC Vaginal Birth After Cesarean (VBAC) Rate

The CMQCC Vaginal Birth After Cesarean (VBAC) Rate is defined as vaginal births per 1,000 deliveries by patients with previous Cesarean deliveries. General acute care hospitals report the VBAC Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The VBAC Rate uses the specifications of AHRQ Inpatient Quality Indicator 22. For more information, please visit the following link by copying and pasting the URL into your web browser:

[https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_22_Vaginal_Birth_After_Cesarean_\(VBAC\)_Delivery_Rate_Uncomplicated.pdf](https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_22_Vaginal_Birth_After_Cesarean_(VBAC)_Delivery_Rate_Uncomplicated.pdf)

CMQCC Exclusive Breast Milk Feeding Rate

The CMQCC Exclusive Breast Milk Feeding Rate is defined as the newborns per 100 who reached at least 37 weeks of gestation (or 3000g if gestational age is missing) who received breast milk

exclusively during their stay at the hospital. Other criteria are that the newborns did not go to the neonatal intensive care unit (NICU), transfer, or die, did not reflect multiple gestation, and did not have codes for parenteral nutrition or galactosemia. General acute care hospitals report the Exclusive Breast Milk Feeding Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The CMQCC Exclusive Breast Milk Feeding Rate uses the Joint Commission National Quality Measure PC-05. For more information, please visit the following link by copying and pasting the URL into your web browser: <https://manual.jointcommission.org/releases/TJC2024B/MIF0170.html>

Number of newborn cases that were exclusively fed breast milk during their hospital stay and meet the inclusion and exclusion criteria

HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate

General acute care hospitals are required to report several HCAI All-Cause Unplanned 30-Day Hospital Readmission Rates, which are broadly defined as the percentage of hospital-level, unplanned, all-cause readmissions after admission for eligible conditions within 30 days of hospital discharge for patients aged 18 years and older. These rates are first stratified based on any eligible condition, mental health disorders, substance use disorders, co-occurring disorders, and no behavioral health diagnosis. Then, each condition-stratified hospital readmission rate is further stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. For more information on the HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate, please visit the following link by copying and pasting the URL into your web browser:

https://hcai.ca.gov/wp-content/uploads/2024/10/HCAI-All-Cause-Readmission-Rate-Exclusions_ADA.pdf

HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate – Any Eligible Condition

Number of inpatient hospital admissions which occurs within 30 days of the discharge date of an eligible index admission and were 18 years or older at time of admission

43

Total number of patients who were admitted to the general acute care hospital and were 18 years or older at time of admission

986

Rate of hospital-level, unplanned, all-cause readmissions after admission for any eligible condition

within 30 days of hospital discharge for patients aged 18 and older

Health Equity Plan

All general acute care hospitals report a health equity plan that identifies the top 10 disparities and a written plan to address them.

Top 10 Disparities

Disparities for each hospital equity measure are identified by comparing the rate ratios by stratification groups. Rate ratios are calculated differently for measures with preferred low rates and those with preferred high rates. Rate ratios are calculated after applying the California Health and Human Services Agency's "Data De-Identification Guidelines (DDG)," dated September 23, 2016.

Table 15. Top 10 disparities and their rate ratio values.

Measures	Stratifications	Stratification Group	Stratification Rate	Reference Group	Reference Rate	Rate Ratio
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Sex Assigned at Birth	Female	4.9	Male	3.6	1.4

Plan to address disparities identified in the data

Overview & Population Impact

Our hospital recognizes that readmission disparities disproportionately impact specific populations, including older adults, individuals with chronic conditions, non-English speakers, and patients from low-income communities. Analysis of our top 10 disparities show higher readmission rates among patients in high Social Vulnerability Index (SVI) areas compared to the hospital average. These disparities lead to avoidable care utilization, higher costs, and increased patient burden.

The most impacted groups include:

- Medicaid-insured patients with limited outpatient follow-up access
- Patients with limited English proficiency (LEP) who face care coordination and health literacy barriers
- Patients with multiple chronic conditions requiring intensive follow-up

Goal

Reduce the 30-day readmission rate disparity between the highest-risk group and the hospital average by at least 5% within 24 months.

Measurable Objectives & Timeframes

1. Data Stratification & Monitoring – 0–6 months

- o Implement enhanced tracking of readmissions by race, ethnicity, language, payer, ZIP code, and SVI.
- o Review stratified data quarterly through the Quality and Equity Committee to identify disparities and refine interventions.

2. Enhanced Discharge Communication – 3–12 months

- o Provide discharge instructions in preferred languages for 100% of LEP patients by month 12.
- o Apply "teach-back" verification for 90% of all discharges by month 9 to confirm understanding.

3. Post-Discharge Follow-up Expansion – 6–18 months

- o Launch a community health worker (CHW) and nurse navigator program for the top 15% highest-risk patients by month 6.
- o Complete follow-up calls within 72 hours post-discharge for 90% of this cohort by month 12.

4. Improved Outpatient Access & Social Support – 6–24 months

- o Partner with local FQHCs, home health, and transportation providers to secure follow-up appointments before discharge.
- o Reduce no-show rates for target groups by 15% within 18 months.

5. Performance Measurement & Reporting – Ongoing; annual review

- o Monitor readmission disparities quarterly and report progress to leadership and community partners annually.
- o Evaluate success based on:

- Disparity reduction from 25% higher-than-average to $\leq 20\%$ within 24 months
- Patient-reported understanding of discharge plans $\geq 90\%$ by month 12
- Sustained improvement for two consecutive years

Evaluation

We will use rolling 12-month averages to monitor trends and adjust strategies. Stratified data will

drive targeted interventions, ensuring cultural and linguistic appropriateness. Progress will be validated through quantitative readmission metrics and qualitative patient feedback.

Commitment

This plan integrates clinical quality improvement with social determinant interventions to reduce disparities and improve care continuity. Through data transparency, culturally responsive communication, and strengthened community partnerships, we are committed to ensuring all patients have equitable opportunities for recovery and reduced risk of avoidable readmission.

Performance in the priority area

General acute care hospitals are required to provide hospital equity plans that address the top 10 disparities by identifying population impact and providing measurable objectives and specific timeframes. For each disparity, hospital equity plans will address performance across priority areas: person-centered care, patient safety, addressing patient social drivers of health, effective treatment, care coordination, and access to care.

Person-centered care

Performance in the Priority Area of Person-Centered Care

Our hospital is committed to care that is respectful of and responsive to each patient's preferences, needs, and values—recognizing that equitable outcomes require addressing the unique barriers faced by the broad range of patient populations we serve. Person-centered care is embedded in our mission through policies, training, and improvement efforts that prioritize dignity, cultural respect, and patient partnership.

Care Planning & Shared Decision-Making

We involve patients and families at every stage through bedside rounding, decision aids, and interdisciplinary conferences. Care plans account for social and cultural contexts, such as dietary and religious needs, and include coordination with providers, case managers, and family to ensure smooth transitions.

Culturally & Linguistically Appropriate Services (CLAS)

We provide professional interpreters and translated materials in the top preferred languages to ensure patients with limited English proficiency understand and can follow their care plans, reducing communication barriers and supporting adherence.

Respect, Dignity, and Autonomy

All staff receive annual training in trauma-informed care, state-mandated modules in implicit bias, and instruction in patient rights. Real-time feedback and person-centered reviews guide actions to ensure all patients feel respected and involved in their care decisions.

Care Transitions & Follow-Up

A structured follow-up program supports patients at highest risk of readmission, including those with complex needs, Medicaid coverage, or high social vulnerability. Follow-up calls, medication reconciliation, and pre-scheduled outpatient appointments are paired with community health worker support to address social needs that may affect recovery.

Patient & Family Advisory Involvement

Our Patient and Family Advisory Council, with broad representation from across our community, reviews policies, materials, and services. Their input has shaped improvements in signage, patient-provider communication, dietary options, and visiting policies to better meet patient needs.

Performance Monitoring & Commitment

We track person-centered care through patient surveys, complaints, follow-up rates, and disparity-focused outcome reviews. By integrating cultural humility, shared decision-making, and proactive support, we ensure care is both clinically effective and person-centered, advancing our health equity

goals and improving recovery experiences for all patients.

Patient safety

Performance in the Priority Area of Patient Safety

Our hospital prioritizes patient safety as a core element of quality care, ensuring that all patients receive treatment in a safe environment, free from preventable harm. We approach safety with a proactive, system-wide strategy that integrates clinical best practices, continuous monitoring, and a person-centered lens to address risks that may disproportionately affect certain populations.

Safety Culture & Staff Engagement

We foster a culture where all staff are empowered to identify and report safety concerns without fear of blame. Daily safety huddles, multidisciplinary rounds, and open communication channels allow us to address issues quickly and share lessons learned across departments.

Evidence-Based Practices

We implement nationally recognized protocols for infection prevention, medication safety, and fall reduction. Standardized checklists, handoff tools, and double-verification processes help reduce variability in care and ensure consistent adherence to safety standards for every patient.

Disparities in Safety Outcomes

Data on adverse events, near misses, and infection rates are reviewed by language, race, ethnicity, and other demographic factors to identify disparities. Targeted interventions—such as enhanced education for patients with limited English proficiency or additional mobility support for high-risk populations—help ensure safety practices are effective for all.

Transitions & High-Risk Care

We prioritize safe handoffs during care transitions by using structured communication tools and involving patients and families in the process. High-risk situations, such as medication changes or discharges to home with complex needs, trigger additional safety checks and follow-up to prevent harm after discharge.

Patient & Family Involvement

Patients and families are encouraged to speak up about safety concerns, ask questions, and participate in care decisions. Feedback from our Patient and Family Advisory Council has informed changes to consent forms, signage, and safety education materials to improve clarity and accessibility.

Performance Monitoring & Commitment

We monitor safety performance using incident reporting trends, infection control data, fall rates, and patient feedback. Findings are shared with staff and leadership to guide ongoing improvements. By embedding safety into every process and reviewing outcomes through a person-centered lens, we ensure all patients—regardless of background—receive the highest standard of safe, reliable care.

Addressing patient social drivers of health

Performance in the Priority Area of Addressing Patient Social Determinants of Health

Our hospital recognizes that social and economic factors—such as housing stability, food security, transportation access, and health literacy—play a critical role in patient health outcomes. Addressing these social determinants of health (SDOH) is essential to providing whole-person care.

Screening & Identification

We screen patients for key SDOH needs during admission, outpatient visits, and discharge planning. Screening questions are integrated into our electronic health record, enabling care teams to document needs and coordinate appropriate resources in real time.

Resource Navigation & Community Partnerships

Patients with identified needs are connected to social workers, case managers, and community health workers who assist with navigating benefits, scheduling follow-up care, and linking to resources. We partner with community organizations, food banks, housing agencies, and

transportation providers to ensure patients have access to the services required for recovery and long-term wellness.

Addressing Barriers to Care

Data on SDOH screenings and interventions are reviewed by demographic factors to ensure that barriers to care are identified and addressed for all patient populations. This review helps us adapt outreach to meet the specific needs of our diverse community.

Care Integration

Social needs are incorporated into individualized care plans alongside clinical treatment goals. For example, if a patient lacks reliable transportation, follow-up appointments may be scheduled at locations closer to home or coordinated with telehealth visits when appropriate.

Patient Empowerment

We provide patients with information about available resources in their preferred language and use teach-back methods to confirm understanding. This ensures patients can access and utilize services that support their health outside the hospital.

Performance Monitoring & Commitment

We track screening completion rates, resource referrals, and follow-up to evaluate the effectiveness of our SDOH efforts. By integrating social needs into care delivery and fostering strong community partnerships, we address root causes of health inequities and support better outcomes for all patients.

Performance in the priority area continued

Performance across all of the following priority areas.

Effective treatment

Performance in the Priority Area of Effective Treatment

Our hospital is committed to providing timely, evidence-based treatment that meets the highest standards of clinical excellence and is delivered with cultural and linguistic competence to all patient populations. We align our care delivery with current clinical guidelines while adapting approaches to meet the needs of all patients.

Evidence-Based Practices

Clinical teams follow standardized protocols grounded in national best practices to ensure consistent, effective care. These protocols are regularly reviewed and updated based on the latest research and quality data to maintain high standards across all specialties.

Care Coordination

We use a multidisciplinary approach that brings together physicians, nurses, pharmacists, therapists, and case managers to ensure treatment plans are comprehensive and well-coordinated. This team-based model supports seamless care transitions and reduces fragmentation, particularly for patients with complex needs.

Addressing Disparities in Care Delivery

Treatment outcomes and process measures are reviewed by demographic factors to identify and address disparities. If gaps are identified, targeted strategies—such as focused education, follow-up, or tailored care planning—are implemented to ensure all patients receive the same standard of effective treatment.

Access to Specialized Services

Patients have access to specialty care both on-site and through partnerships with regional providers. Telehealth and outreach programs expand access for those in rural or underserved areas, ensuring geographic or transportation barriers do not delay treatment.

Patient Engagement

We involve patients and families in treatment decisions, providing information in plain language and preferred languages to support understanding and adherence. The teach-back method is used to confirm comprehension of treatment plans, medication regimens, and self-care instructions.

Performance Monitoring & Commitment

We track clinical outcomes, adherence to evidence-based protocols, and patient feedback to assess treatment effectiveness. By integrating population-focused reviews into this process, we ensure that treatment is not only clinically sound but also accessible, appropriate, and impactful for every patient we serve.

Care coordination

Performance in the Priority Area of Care Coordination

Our hospital is committed to seamless, patient-centered care coordination that ensures services are well-organized across providers, settings, and time. We recognize that effective coordination is essential for improving outcomes, reducing preventable readmissions, and promoting access and quality of care.

Multidisciplinary Team Approach

We coordinate care through interdisciplinary teams that include physicians, nurses, pharmacists, therapists, social workers, and case managers. This team-based approach supports clear communication, comprehensive care planning, and smooth transitions between inpatient, outpatient, and community-based services.

Transition Planning

Discharge and transfer processes are guided by standardized protocols to ensure patients leave the hospital with a clear plan for follow-up care. Appointments, prescriptions, and needed services are arranged prior to discharge to minimize gaps in treatment and support recovery.

Addressing Barriers to Continuity

Care coordination processes incorporate screening for social determinants of health to identify and address barriers such as transportation, language access, and affordability. Community health workers and resource navigators connect patients to local services that support safe and timely follow-up care.

Information Sharing

We use secure, integrated health information systems to share necessary clinical information with primary care providers, specialists, and community partners. This ensures that all members of the care team have timely access to critical details, reducing duplication and delays in care.

Patient & Family Engagement

Patients and families are active participants in the coordination process. We communicate in the patient's preferred language, provide clear instructions, and use teach-back methods to confirm understanding of care plans, medication changes, and follow-up requirements.

Performance Monitoring & Commitment

We track care coordination effectiveness through follow-up completion rates, readmission trends, and patient feedback. Data are reviewed to ensure coordination efforts are effective for all patient populations, including patients with higher social vulnerability or complex care needs. Our goal is to make every transition safe, informed, and supportive of the patient's ongoing health.

Access to care

Performance in the Priority Area of Access to Care

Our hospital is committed to ensuring that all patients, regardless of background or circumstances, have timely and effective access to the care and services they need. We address barriers to access by combining expanded service options, flexible care delivery models, and intentional outreach to all populations, including those that are underserved.

Timely Access to Services

We monitor wait times for appointments, procedures, and emergency services to ensure patients receive care without unnecessary delay. Scheduling processes are designed to prioritize urgent needs and accommodate same-day or next-day access for high-priority cases.

Geographic and Transportation Support

To reduce geographic barriers, we offer telehealth visits, outreach clinics, and partnerships with regional providers. For patients with transportation challenges, we coordinate with community organizations, rideshare services, and non-emergency medical transport providers to ensure they can attend appointments and follow-up visits.

Financial Access and Assistance

We provide financial counseling, charity care programs, and flexible payment options to help patients navigate healthcare costs. Staff assist patients in understanding their insurance coverage, applying for benefits, and connecting with resources that reduce the financial burden of care.

Language and Communication Access

Interpreter services and translated materials are available in the top preferred languages of our community to ensure all patients can understand their care options and make informed decisions. We use plain language communication to enhance understanding for patients of all literacy levels.

Comprehensive Outreach

We partner with community organizations, schools, and local health agencies to connect with populations that may face barriers to care, including those in high social vulnerability areas. Outreach activities include health education events, screening programs, and connection to primary care providers.

Performance Monitoring & Commitment

We track appointment availability, telehealth utilization, patient feedback, and service use by demographic groups to assess population access. This data guides improvements in scheduling and outreach. By addressing logistical, financial, and cultural barriers, we ensure that care is accessible, timely, and responsive to the needs of all patients in our community.

Methodology Guidelines

Did the hospital follow the methodology in the Measures Submission Guide? (Y/N)
