

Hospital Equity Measures Report

General Information

Report Type:	Hospital Equity Measures Report
Year:	2024
Hospital Name:	KAISER FOUNDATION HOSPITAL - SOUTH SACRAMENTO
Facility Type:	General Acute Care Hospital
Hospital HCAI ID:	106342344
Report Period:	01/01/2024 - 12/31/2024
Status:	Complete
Due Date:	11/29/2025
Last Updated:	02/25/2026
Hospital Location with Clean Water and Air:	Y
Hospital Web Address for Equity Report:	https://tinyurl.com/KFH-SSC

Overview

Assembly Bill No. 1204 requires the Department of Health Care Access and Information (HCAI) to develop and administer a Hospital Equity Measures Reporting Program to collect and post summaries of key hospital performance and patient outcome data regarding sociodemographic information, including but not limited to age, sex, race/ethnicity, payor type, language, disability status, and sexual orientation and gender identity.

Hospitals (general acute, children's, and acute psychiatric) and hospital systems are required to annually submit their reports to HCAI. These reports contain summaries of each measure, the top 10 disparities, and the equity plans to address the identified disparities. HCAI is required to maintain a link on the HCAI website that provides access to the content of hospital equity measures reports and equity plans to the public. All submitted hospitals are required to post their reports on their websites, as well.

Laws and Regulations

For more information on Assembly Bill No. 1204, please visit the following link by copying and pasting the URL into your web browser:
https://leginfo.legislature.ca.gov/faces/billTextClient.xhtml?bill_id=202120220AB1204

Hospital Equity Measures

Joint Commission Accreditation

General acute care hospitals are required to report three structural measures based on the Commission Accreditation's Health Care Disparities Reduction and Patient-Centered Communication Accreditation Standards. For more information on these measures, please visit the following link by copying and pasting the URL into your web browser:

The first two structural measures are scored as "yes" or "no"; the third structural measure comprises the percentages of patients by five categories of preferred languages spoken, in addition to one other/unknown language category.

Designate an individual to lead hospital health equity activities (Y = Yes, N = No).

Y

Provide documentation of policy prohibiting discrimination (Y = Yes, N = No).

Y

Number of patients that were asked their preferred language, five defined categories and one other/unknown languages category.

139777

Table 1. Summary of preferred languages reported by patients.

Languages	Number of patients who report preferring language	Total number of patients	Percentage of total patients who report preferring language (%)
English Language	121541	139777	87.0
Spanish Language	8343	139777	6.0
Asian Pacific Islander Languages	6638	139777	4.7
Middle Eastern Languages	797	139777	0.6
American Sign Language	130	139777	0.1
Other Languages	2328	139777	1.7

Centers for Medicare & Medicaid Services (CMS) Hospital Commitment to Health Equity Structural (HCHE) Measure

There are five domains that make up the CMS Hospital Commitment to HCHE measures. Each domain is scored as "yes" or "no." In order to score "yes," a general acute care hospital is required to confirm all the domain's attestations. Lack of one or more of the attestations results in a score of "no." For more information on the CMS Hospital Commitment to HCHE measures, please visit the following link by copying and pasting the URL into your web browser:

<https://data.cms.gov/provider-data/topics/hospitals/health-equity>

Centers for Medicare & Medicaid Services (CMS) Hospital Commitment to Health Equity Structural (HCHE) Measure Domain 1: Strategic Planning (Yes/No)

- Our hospital strategic plan identifies priority populations who currently experience health disparities.
- Our hospital strategic plan identifies healthcare equity goals and discrete action steps to achieve these goals.
- Our hospital strategic plan outlines specific resources that have been dedicated to achieving our equity goals.
- Our hospital strategic plan describes our approach for engaging key stakeholders, such as community-based organizations.

Y

CMS HCHE Measure Domain 2: Data Collection (Yes/No)

- Our hospital strategic plan identifies healthcare equity goals and discrete action steps to achieve these goals.
- Our hospital has training for staff in culturally sensitive collection of demographics and/or social determinant of health information.
- Our hospital inputs demographic and/or social determinant of health information collected from patients into structured, interoperable data elements using a certified electronic health record (EHR) technology.

Y

CMS HCHE Measure Domain 3: Data Analysis (Yes/No)

- Our hospital stratifies key performance indicators by demographic and/or social determinants of health variables to identify equity gaps and includes this information in hospital performance dashboards.

Y

CMS HCHE Measure Domain 4: Quality Improvement (Yes/No)

- Our hospital participates in local, regional or national quality improvement activities focused on reducing health disparities.

Y

CMS HCHE Measure Domain 5: Leadership Engagement (Yes/No)

- Our hospital senior leadership, including chief executives and the entire hospital board of trustees, annually reviews our strategic plan for achieving health equity.
- Our hospital senior leadership, including chief executives and the entire hospital board of trustees, annually review key performance indicators stratified by demographic and/or social factors.

Y

Centers for Medicare & Medicaid Services (CMS) Social Drivers of Health (SDOH)

General acute care hospitals are required to report on rates of screenings and intervention rates among patients above 18 years old for five health related social needs (HRSN), which are food insecurity, housing instability, transportation problems, utility difficulties, and interpersonal safety. These rates are reported separately as being screened as positive for any of the five HRSNs, positive for each individual HRSN, and the intervention rate for each positively screened HRSN. For more information on the CMS SDOH, please visit the following link by copying and pasting the URL into your web browser:

<https://www.cms.gov/priorities/innovation/key-concepts/social-drivers-health-and-health-related-social-needs>

Number of patients admitted to an inpatient hospital stay who are 18 years or older on the date of admission and are screened for all of the five HRSN

7513

Total number of patients who are admitted to a hospital inpatient stay and who are 18 years or older on the date of admission

11630

Rate of patients admitted for an inpatient hospital stay who are 18 years or older on the date of admission, were screened for an HRSN, and who screened positive for one or more of the HRSNs

64.6

Table 2. Positive screening rates and intervention rates for the five Health Related Social Needs of the Centers of Medicare & Medicaid Services (CMS) Social Drivers of Health (SDOH).

Social Driver of Health	Number of positive screenings	Rate of positive screenings (%)	Number of positive screenings who received intervention	Rate of positive screenings who received intervention (%)
Food Insecurity	118	1.6	0	
Housing Instability	93	1.2	0	
Transportation Problems	70	0.9	0	
Utility Difficulties	33	0.4	0	
Interpersonal Safety	suppressed	suppressed	0	

Core Quality Measures for General Acute Care Hospitals

There are two quality measures from the Hospital Consumer Assessment of Healthcare Providers and Systems (HCAHPS) survey. For more information on the HCAHPS survey, please visit the following link by copying and pasting the URL into your web browser:

<https://hcahpsonline.org/en/survey-instruments/>

Patient Recommends Hospital

The first HCAHPS quality measure is the percentage of patients who would recommend the hospital to friends and family. For this measure, general acute care hospitals provide the percentage of patient respondents who responded "probably yes" or "definitely yes" to whether they would recommend the hospital, the percentage of the people who responded to the survey (i.e., the response rate), and the inputs for the percentages. The percentages and inputs are stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding HCAHPS question number is 19.

Number of respondents who replied "probably yes" or "definitely yes" to HCAHPS Question 19, "Would you recommend this hospital to your friends and family?"

367

Total number of respondents to HCAHPS Question 19

386

Percentage of total respondents who responded "probably yes" or "definitely yes" to HCAHPS Question 19

95.1

Total number of people surveyed on HCAHPS Question 19

2032

Response rate, or the percentage of people who responded to HCAHPS Question 19

19.0

Table 3. Patient recommends hospital by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

Race and/or Ethnicity	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
American Indian or Alaska Native					
Asian					
Black or African American					
Hispanic or Latino					
Middle Eastern or North African					
Multiracial and/or Multiethnic (two or more races)					
Native Hawaiian or Pacific Islander					
White					

Age	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Age < 18					
Age 18 to 34					
Age 35 to 49					
Age 50 to 64					
Age 65 Years and Older					

Sex assigned at birth	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Female					
Male					
Unknown					

Payer Type	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Medicare					
Medicaid					
Private					
Self-Pay					
Other					

Preferred Language	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
English Language					
Spanish Language					
Asian Pacific Islander Languages					
Middle Eastern Languages					
American Sign Language					
Other/Unknown Languages					

Disability Status	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Does not have a disability					
Has a mobility disability					
Has a cognition disability					
Has a hearing disability					
Has a vision disability					
Has a self-care disability					
Has an independent living disability					

Sexual Orientation	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Lesbian, gay or homosexual					
Straight or heterosexual					
Bisexual					
Something else					
Don't know					
Not disclosed					

Gender Identity	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Female					
Female-to-male (FTM)/ transgender male/trans man					
Male					
Male-to-female (MTF)/ transgender female/trans woman					
Non-conforming gender					
Additional gender category or other					
Not disclosed					

Patient Received Information in Writing

The second HCAHPS quality measure is the percentage of patients who reported receiving information in writing on symptoms and health problems to look out for after leaving the hospital. General acute care hospitals are required to provide the percentage of patient respondents who responded "yes" to being provided written information, the percentage of the people who responded to the survey (i.e., the response rate), and the inputs for these percentages. These percentages and inputs are stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding HCAHPS question number is 17.

Number of respondents who replied "yes" to HCAHPS Question 17, "During this hospital stay, did you get information in writing about what symptoms or health problems to look out for after you left the

hospital?"

336

Total number of respondents to HCAHPS Question 17

386

Percentage of respondents who responded "yes" to HCAHPS Question 17

87.0

Total number of people surveyed on HCAHPS Question 17

2032

Response rate, or the percentage of people who responded to HCAHPS Question 17

19.0

Table 4. Patient reports receiving information in writing about symptoms or health problems by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

Race and/or Ethnicity	Number of "yes" responses	Total number of responses	Percentage of "yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)

Agency for Healthcare Research and Quality (AHRQ) Indicators

General acute care hospitals are required to report on two indicators from the Agency for Healthcare Research and Quality (AHRQ). For general information about AHRQ indicators, please visit the following link by copying and pasting the URL into your web browser:

<https://qualityindicators.ahrq.gov/>

Pneumonia Mortality Rate

The Pneumonia Mortality Rate is defined as the rate of in-hospital deaths per 1,000 hospital discharges with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission for patients ages 18 years and older. General acute care hospitals report the Pneumonia Mortality Rate by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding AHRQ Inpatient Quality Indicator is 20. For more information about this indicator, please visit the following link by copying and pasting the URL into your web browser:

https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_20_Pneumonia_Mortality_Rate.pdf

Number of in-hospital deaths with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission

39

Total number of hospital discharges with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission

424

Rate of in-hospital deaths per 1,000 hospital discharges with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission

92.0

Table 5. Pneumonia Mortality Rate by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

Death Rate among Surgical Inpatients with Serious Treatable Complications

The Death Rate among Surgical Inpatients with Serious Treatable Complications is defined as the rate of in-hospital deaths per 1,000 surgical discharges among patients ages 18-89 years old or obstetric patients with serious treatable complications. General acute care hospitals report this measure by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding AHRQ Patient Safety Indicator is 04. For more information about this indicator, please visit the following link by copying and pasting the URL into your web browser:

California Maternal Quality Care Collaborative (CMQCC) Core Quality Measures

There are three core quality maternal measures adopted from the California Maternal Quality Care Collaborative (CMQCC).

CMQCC Nulliparous, Term, Singleton, Vertex (NTSV) Cesarean Birth Rate

The CMQCC Nulliparous, Term, Singleton, Vertex (NTSV) Cesarean Birth Rate is defined as nulliparous women with a term (at least 37 weeks gestation), singleton baby in a vertex position delivered by cesarian birth. General acute care hospitals report the NTSV Cesarean Birth Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. For more information, please visit the following link by copying and pasting the URL into your web browser:

CMQCC Vaginal Birth After Cesarean (VBAC) Rate

The CMQCC Vaginal Birth After Cesarean (VBAC) Rate is defined as vaginal births per 1,000 deliveries by patients with previous Cesarean deliveries. General acute care hospitals report the VBAC Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The VBAC Rate uses the specifications of AHRQ Inpatient Quality Indicator 22. For more information, please visit the following link by copying and pasting the URL into your web browser:

[https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_22_Vaginal_Birth_After_Cesarean_\(VBAC\)_Delivery_Rate_Uncomplicated.pdf](https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_22_Vaginal_Birth_After_Cesarean_(VBAC)_Delivery_Rate_Uncomplicated.pdf)

CMQCC Exclusive Breast Milk Feeding Rate

The CMQCC Exclusive Breast Milk Feeding Rate is defined as the newborns per 100 who reached at least 37 weeks of gestation (or 3000g if gestational age is missing) who received breast milk

exclusively during their stay at the hospital. Other criteria are that the newborns did not go to the neonatal intensive care unit (NICU), transfer, or die, did not reflect multiple gestation, and did not have codes for parenteral nutrition or galactosemia. General acute care hospitals report the Exclusive Breast Milk Feeding Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The CMQCC Exclusive Breast Milk Feeding Rate uses the Joint Commission National Quality Measure PC-05. For more information, please visit the following link by copying and pasting the URL into your web browser:

HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate

General acute care hospitals are required to report several HCAI All-Cause Unplanned 30-Day Hospital Readmission Rates, which are broadly defined as the percentage of hospital-level, unplanned, all-cause readmissions after admission for eligible conditions within 30 days of hospital discharge for patients aged 18 years and older. These rates are first stratified based on any eligible condition, mental health disorders, substance use disorders, co-occurring disorders, and no behavioral health diagnosis. Then, each condition-stratified hospital readmission rate is further stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. For more information on the HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate, please visit the following link by copying and pasting the URL into your web browser:

https://hcai.ca.gov/wp-content/uploads/2024/10/HCAI-All-Cause-Readmission-Rate-Exclusions_ADA.pdf

HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate – Any Eligible Condition

Number of inpatient hospital admissions which occurs within 30 days of the discharge date of an eligible index admission and were 18 years or older at time of admission

1629

Total number of patients who were admitted to the general acute care hospital and were 18 years or older at time of admission

12650

Rate of hospital-level, unplanned, all-cause readmissions after admission for any eligible condition

within 30 days of hospital discharge for patients aged 18 and older

12.9

Table 10. HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate for any eligible condition by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

Race and/or Ethnicity	Number of inpatient readmissions	Total number of admitted patients	Readmission rate (%)

Health Equity Plan

All general acute care hospitals report a health equity plan that identifies the top 10 disparities and a written plan to address them.

Top 10 Disparities

Disparities for each hospital equity measure are identified by comparing the rate ratios by stratification groups. Rate ratios are calculated differently for measures with preferred low rates and those with preferred high rates. Rate ratios are calculated after applying the California Health and Human Services Agency's "Data De-Identification Guidelines (DDG)," dated September 23, 2016.

Table 15. Top 10 disparities and their rate ratio values.

Measures	Stratifications	Stratification Group	Stratification Rate	Reference Group	Reference Rate	Rate Ratio
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Age (excluding maternal measures)	65 and older	16.8	18 to 34	6.0	2.8
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Expected Payor	Medicare	17.3	Private	7.1	2.4
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Age (excluding maternal measures)	50 to 64	13.9	18 to 34	6.0	2.3
CMQCC Exclusive Breast Milk Feeding	Race and/or Ethnicity	Asian	47.2	Multiracial and/or Multiethnic (two or more races)	78.8	1.7
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Expected Payor	Medicaid	11.8	Private	7.1	1.6
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Age (excluding maternal measures)	35 to 49	8.8	18 to 34	6.0	1.5
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Race and/or Ethnicity	Black or African American	16.9	Asian	11.8	1.4
Agency for Healthcare Research and Quality (AHRQ) Quality Indicator Pneumonia Mortality Rate	Race and/or Ethnicity	Asian	122.2	White	92.0	1.3
CMQCC Exclusive Breast Milk Feeding	Race and/or Ethnicity	Black or African American	62.2	Multiracial and/or Multiethnic (two or more races)	78.8	1.3
Agency for Healthcare Research and Quality (AHRQ) Quality Indicator Pneumonia Mortality Rate	Sex Assigned at Birth	Female	101.9	Male	81.7	1.2

Plan to address disparities identified in the data

Using the health equity report, we will identify the impact of the population. We will reduce HCAI all-cause unplanned 30-day hospital readmissions by 10% within 2 years. We offer our patients culturally tailored patient education, we use interpreters as needed, and we will continue to expand our community partnership and continue workforce training. The top 10 disparities identified in the data highlighted opportunities with All-Cause Readmission Rates, California Maternal Quality Care Collaborative (CMQCC) Exclusive Breast Milk Feeding, and Agency for Healthcare Research and Quality (AHRQ) Measures of Death Rate among Surgical Inpatients and Pneumonia Mortality Rate.

To support improvement in all-cause hospital Readmission and surgical outcomes, Kaiser Foundation Hospital South Sacramento is working to obtain Geriatric Surgical Verification through the American College of Surgeons in November 2026. Achieving Geriatric Surgical Verification reflects a hospital's commitment to improving geriatric surgical care through the implementation of 32 standards to patients 75 years of age or older who are having inpatient surgery. This work also aligns with the Institute for Healthcare Improvement (IHI) Age-Friendly Health Systems (AFHS) recognition and includes focused attention to the unique needs and vulnerability of the older surgical patient. This focused attention guides preoperative and postoperative care pathways that decrease the incidence of negative outcomes, such as readmission and death rate among surgical inpatients, which was identified in our data. The measurable objectives include reducing the 30-day readmission rate for patients aged 65 and older by 10% within 24 months.

To support improvement in Exclusive Breast Milk Feeding, our staff actively offer education regarding breastfeeding and identify any barriers to breastfeeding while encouraging culturally sensitive breastfeeding support. Review of our data identified Asian and Black or African American populations as an opportunity for higher rates. Kaiser Foundation Hospital South Sacramento launched a donor milk program in 2024, which has contributed to an overall improvement in our Exclusive Breast Milk Feeding rate. Additional initiatives include culturally responsive lactation support, community partnerships, interpreter and translation services, data-driven monitoring, and patient-centered education. Our staff continues to promote an antenatal hand expression kit, which provides supplies to support breastfeeding activities in our patients. The goal is to achieve a 5% increase in exclusive breast milk feeding rates for all populations by the end of 2026.

The Regional Age Friendly Hospital System (AFHS) Core Team will be leading and supporting all 21 KP NCAL facilities to achieve IHI AFHS Level 1 Recognition status by the end of 2025 and then IHI AFHS Level 2 Recognition status by the end of 2026. The team will also ensure that all facilities have protocols in place to affirmatively attest to receive full credit for all 5 Domains of the CMA AFHS Measure by May 2025. This will position our hospitals to consistently and reliably provide high-quality care to all hospitalized elderly patients.

Performance in the priority area

General acute care hospitals are required to provide hospital equity plans that address the top 10 disparities by identifying population impact and providing measurable objectives and specific timeframes. For each disparity, hospital equity plans will address performance across priority areas: person-centered care, patient safety, addressing patient social drivers of health, effective treatment, care coordination, and access to care.

Person-centered care

Kaiser Foundation Hospital South Sacramento uses the HCAHPS Patient Experience scores to assess our performance in person-centered care. Recognizing that the number of older adults in the US is growing rapidly, our hospital embarked on the Institute for Healthcare Improvement (IHI) Age-Friendly Health Systems (AFHS) journey. Kaiser Foundation Hospital South Sacramento has successfully achieved Level 2 Designation, which recognizes that our hospital reliably provides a set of four evidence-based elements for our geriatric population – What Matters, Medication, Mentation, & Mobility. In addition, we have patient and family advisors who participate in hospital committees to help provide the patient with a perspective and improve the way we provide person-centered care.

Patient safety

We monitor patient safety events through a reporting system called Safety Priority Index. Safety Priority Index (SPI) is a comprehensive key performance indicator for Patient Safety. It was designed to encourage both continuous improvement and sustained vigilance. It is composed of 8 types of patient safety events: All SSI, C-Diff, Falls with any Injury, Hospital Acquired Pneumonia, Hospital Acquired Pressure Injuries Stage 2 and above, CAUTI, CLABSI, and C-Section SSI. We participate in daily safety huddles. We have implemented high-reliability training. We are a Just Culture. Kaiser Foundation Hospital South Sacramento utilizes the Safety Priority Index (SPI) as a comprehensive key performance indicator for Patient Safety. The SPI is a composite of 8 types of patient safety events – All Surgical Site Infections (SSI), C. Difficile (CDIFF), Falls with Injury, Hospital Acquired Pneumonia (HAP), Hospital Acquired Pressure Injuries Stage 2 and above (HAPI), Catheter Associated Urinary Tract Infections (CAUTI), Central Line Associated Blood Stream Infections (CLABSI), and Cesarean Section Surgical Site Infections (CSEC SSI) – and was designed to

encourage both continuous improvement and sustained vigilance. This indicator is reviewed during daily safety huddles, weekly quality & patient safety meetings, and monthly quality meetings, and our hospital has achieved incremental reduction in patient safety events each year. To help support our journey to zero harm, Kaiser Foundation Hospital has implemented High Reliability Organization (HRO) and Daily Management Systems (DMS) trainings and has actively integrated the principles and tools into patient safety initiatives.

Addressing patient social drivers of health

At Kaiser Foundation Hospital South Sacramento, patients are screened for social determinants of health upon admission to the hospital (food insecurity, housing instability, transportation barriers, etc.), and patients who screen positive are referred to licensed clinical social workers, who facilitate connections to appropriate resources across the continuum of care. We collaborate closely with community-based organizations to support these efforts. To ensure needs are documented and can be monitored over time, ICD-10Z codes are utilized to capture SDOH-related data within the electronic health record.

Performance in the priority area continued

Performance across all of the following priority areas.

Effective treatment

We participate in the CMS and the Joint Commission core measures. We participate in the American Heart Association Get With The Guidelines stroke, coronary artery disease, heart failure, and comprehensive stroke programs. We have clinical pathways for chronic diseases like diabetes, hypertension, CHF, and COPD. We have medication adherence programs. Kaiser Foundation Hospital South Sacramento actively participates in national quality improvement initiatives, including the CMS and The Joint Commission core measure programs, as well as the American Heart Association's Get With The Guidelines programs for stroke and heart failure. To promote consistent, evidence-based care, we implement standardized clinical pathways and order sets for high-impact conditions such as diabetes, hypertension, stroke, sepsis, congestive heart failure (CHF), and chronic obstructive pulmonary disease (COPD). Members with chronic conditions are enrolled in disease-specific management programs designed to monitor clinical status and support adherence to ongoing treatment plans.

Care coordination

Our transition of care programs include medication reconciliation, discharge planning, and follow-up calls. We integrate inpatient, outpatient, and post-acute care through case managers and care navigators. Kaiser Foundation Hospital South Sacramento implements a comprehensive transition of care program that includes medication reconciliation, discharge planning, and post-discharge follow-up calls to support safe and effective care continuity. Care coordination across inpatient, outpatient, and post-acute settings is facilitated through an integrated model involving case managers and care navigators. There is a strong emphasis on engaging patients and their families in the development and execution of individualized care plans, ensuring that care is both patient-centered and aligned with best practices.

Access to care

Kaiser Foundation Hospital South Sacramento receives monthly access reports across all departments to monitor performance and ensure timely care delivery. The "initiate to Seen" (ITS) metric is traced for 5-, 10-, and 15-day access targets, supporting continuous improvement in appointment availability. In addition, to support patients with limited English proficiency, translation

services are available during care interactions to ensure equitable communication. Advanced Care at Home is a new initiative we launched in 2025, which provides care to eligible patients in their own homes, using a combination of virtual monitoring, in-person clinical visits, and technology for 24/7 support. This initiative aims to reduce inpatient bed demand, improve patient experience and outcomes, and improve patient access to care.

Methodology Guidelines

Did the hospital follow the methodology in the Measures Submission Guide? (Y/N)
