

# Hospital Equity Measures Report

## General Information

Report Type:	Hospital Equity Measures Report
Year:	2024
Hospital Name:	SHARP CORONADO HOSPITAL AND HEALTHCARE CENTER
Facility Type:	General Acute Care Hospital
Hospital HCAI ID:	106370689
Report Period:	01/01/2024 - 12/31/2024
Status:	Complete
Due Date:	11/29/2025
Last Updated:	03/05/2026
Hospital Location with Clean Water and Air:	N
Hospital Web Address for Equity Report:	<a href="https://www.sharp.com/about/quality">https://www.sharp.com/about/quality</a>

## Overview

Assembly Bill No. 1204 requires the Department of Health Care Access and Information (HCAI) to develop and administer a Hospital Equity Measures Reporting Program to collect and post summaries of key hospital performance and patient outcome data regarding sociodemographic information, including but not limited to age, sex, race/ethnicity, payor type, language, disability status, and sexual orientation and gender identity.

Hospitals (general acute, children's, and acute psychiatric) and hospital systems are required to annually submit their reports to HCAI. These reports contain summaries of each measure, the top 10 disparities, and the equity plans to address the identified disparities. HCAI is required to maintain a link on the HCAI website that provides access to the content of hospital equity measures reports and equity plans to the public. All submitted hospitals are required to post their reports on their websites, as well.

## Laws and Regulations

For more information on Assembly Bill No. 1204, please visit the following link by copying and pasting the URL into your web browser:  
[https://leginfo.legislature.ca.gov/faces/billTextClient.xhtml?bill\\_id=202120220AB1204](https://leginfo.legislature.ca.gov/faces/billTextClient.xhtml?bill_id=202120220AB1204)

## Hospital Equity Measures

### Joint Commission Accreditation

General acute care hospitals are required to report three structural measures based on the Commission Accreditation's Health Care Disparities Reduction and Patient-Centered Communication Accreditation Standards. For more information on these measures, please visit the following link by copying and pasting the URL into your web browser:

The first two structural measures are scored as "yes" or "no"; the third structural measure comprises the percentages of patients by five categories of preferred languages spoken, in addition to one other/unknown language category.

Designate an individual to lead hospital health equity activities (Y = Yes, N = No).

Y

Provide documentation of policy prohibiting discrimination (Y = Yes, N = No).

Y

Number of patients that were asked their preferred language, five defined categories and one other/unknown languages category.

37098

Table 1. Summary of preferred languages reported by patients.

Languages	Number of patients who report preferring language	Total number of patients	Percentage of total patients who report preferring language (%)
English Language	36161	37098	97.5
Spanish Language	773	37098	2.1
Asian Pacific Islander Languages	35	37098	0.1
Middle Eastern Languages	93	37098	0.3
American Sign Language	suppressed	37098	suppressed
Other Languages	suppressed	37098	suppressed

**Centers for Medicare & Medicaid Services (CMS) Hospital Commitment to Health Equity Structural (HCHE) Measure**

There are five domains that make up the CMS Hospital Commitment to HCHE measures. Each domain is scored as "yes" or "no." In order to score "yes," a general acute care hospital is required to confirm all the domain's attestations. Lack of one or more of the attestations results in a score of "no." For more information on the CMS Hospital Commitment to HCHE measures, please visit the following link by copying and pasting the URL into your web browser:

<https://data.cms.gov/provider-data/topics/hospitals/health-equity>

**Centers for Medicare & Medicaid Services (CMS) Hospital Commitment to Health Equity Structural (HCHE) Measure Domain 1: Strategic Planning (Yes/No)**

- Our hospital strategic plan identifies priority populations who currently experience health disparities.
- Our hospital strategic plan identifies healthcare equity goals and discrete action steps to achieve these goals.
- Our hospital strategic plan outlines specific resources that have been dedicated to achieving our equity goals.
- Our hospital strategic plan describes our approach for engaging key stakeholders, such as community-based organizations.

Y

**CMS HCHE Measure Domain 2: Data Collection (Yes/No)**

- Our hospital strategic plan identifies healthcare equity goals and discrete action steps to achieve these goals.
- Our hospital has training for staff in culturally sensitive collection of demographics and/or social determinant of health information.
- Our hospital inputs demographic and/or social determinant of health information collected from patients into structured, interoperable data elements using a certified electronic health record (EHR) technology.

Y

#### CMS HCHE Measure Domain 3: Data Analysis (Yes/No)

- Our hospital stratifies key performance indicators by demographic and/or social determinants of health variables to identify equity gaps and includes this information in hospital performance dashboards.

Y

#### CMS HCHE Measure Domain 4: Quality Improvement (Yes/No)

- Our hospital participates in local, regional or national quality improvement activities focused on reducing health disparities.

Y

#### CMS HCHE Measure Domain 5: Leadership Engagement (Yes/No)

- Our hospital senior leadership, including chief executives and the entire hospital board of trustees, annually reviews our strategic plan for achieving health equity.
- Our hospital senior leadership, including chief executives and the entire hospital board of trustees, annually review key performance indicators stratified by demographic and/or social factors.

Y

### **Centers for Medicare & Medicaid Services (CMS) Social Drivers of Health (SDOH)**

General acute care hospitals are required to report on rates of screenings and intervention rates among patients above 18 years old for five health related social needs (HRSN), which are food insecurity, housing instability, transportation problems, utility difficulties, and interpersonal safety. These rates are reported separately as being screened as positive for any of the five HRSNs, positive for each individual HRSN, and the intervention rate for each positively screened HRSN. For more information on the CMS SDOH, please visit the following link by copying and pasting the URL into your web browser:

<https://www.cms.gov/priorities/innovation/key-concepts/social-drivers-health-and-health-related-social-needs>

Number of patients admitted to an inpatient hospital stay who are 18 years or older on the date of admission and are screened for all of the five HRSN

2537

Total number of patients who are admitted to a hospital inpatient stay and who are 18 years or older on the date of admission

3149

Rate of patients admitted for an inpatient hospital stay who are 18 years or older on the date of admission, were screened for an HRSN, and who screened positive for one or more of the HRSNs

80.6

Table 2. Positive screening rates and intervention rates for the five Health Related Social Needs of the Centers of Medicare & Medicaid Services (CMS) Social Drivers of Health (SDOH).

<b>Social Driver of Health</b>	<b>Number of positive screenings</b>	<b>Rate of positive screenings (%)</b>	<b>Number of positive screenings who received intervention</b>	<b>Rate of positive screenings who received intervention (%)</b>
<b>Food Insecurity</b>	696	27.4	467	18.4
<b>Housing Instability</b>	765	30.2	511	20.1
<b>Transportation Problems</b>	746	29.4	496	19.6
<b>Utility Difficulties</b>	689	27.2	460	18.1
<b>Interpersonal Safety</b>	690	27.2	461	18.2

## Core Quality Measures for General Acute Care Hospitals

There are two quality measures from the Hospital Consumer Assessment of Healthcare Providers and Systems (HCAHPS) survey. For more information on the HCAHPS survey, please visit the following link by copying and pasting the URL into your web browser:

<https://hcahpsonline.org/en/survey-instruments/>

## Patient Recommends Hospital

The first HCAHPS quality measure is the percentage of patients who would recommend the hospital to friends and family. For this measure, general acute care hospitals provide the percentage of patient respondents who responded "probably yes" or "definitely yes" to whether they would recommend the hospital, the percentage of the people who responded to the survey (i.e., the response rate), and the inputs for the percentages. The percentages and inputs are stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding HCAHPS question number is 19.

Number of respondents who replied "probably yes" or "definitely yes" to HCAHPS Question 19, "Would you recommend this hospital to your friends and family?"

374

Total number of respondents to HCAHPS Question 19

394

Percentage of total respondents who responded "probably yes" or "definitely yes" to HCAHPS Question 19

94.9

Total number of people surveyed on HCAHPS Question 19

1970

Response rate, or the percentage of people who responded to HCAHPS Question 19

20.0

Table 3. Patient recommends hospital by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

<b>Race and/or Ethnicity</b>	<b>Number of "probably yes" or "definitely yes" responses</b>	<b>Total number of responses</b>	<b>Percent of "probably yes" or "definitely yes" responses (%)</b>	<b>Total number of patients surveyed</b>	<b>Response rate of patients surveyed (%)</b>

Female-to-male (FTM)/ transgender male/trans man					
Male					
Male-to-female (MTF)/ transgender female/trans woman					
Non-conforming gender					
Additional gender category or other					
Not disclosed					

## Patient Received Information in Writing

The second HCAHPS quality measure is the percentage of patients who reported receiving information in writing on symptoms and health problems to look out for after leaving the hospital. General acute care hospitals are required to provide the percentage of patient respondents who responded "yes" to being provided written information, the percentage of the people who responded to the survey (i.e., the response rate), and the inputs for these percentages. These percentages and inputs are stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding HCAHPS question number is 17.

Number of respondents who replied "yes" to HCAHPS Question 17, "During this hospital stay, did you get information in writing about what symptoms or health problems to look out for after you left the

hospital?"

351  
Total number of respondents to HCAHPS Question 17  
394

Percentage of respondents who responded "yes" to HCAHPS Question 17  
89.1

Total number of people surveyed on HCAHPS Question 17  
1970

Response rate, or the percentage of people who responded to HCAHPS Question 17  
20.0

Table 4. Patient reports receiving information in writing about symptoms or health problems by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

## Agency for Healthcare Research and Quality (AHRQ) Indicators

General acute care hospitals are required to report on two indicators from the Agency for Healthcare Research and Quality (AHRQ). For general information about AHRQ indicators, please visit the following link by copying and pasting the URL into your web browser:

<https://qualityindicators.ahrq.gov/>

## Pneumonia Mortality Rate

The Pneumonia Mortality Rate is defined as the rate of in-hospital deaths per 1,000 hospital discharges with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission for patients ages 18 years and older. General acute care hospitals report the Pneumonia Mortality Rate by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding AHRQ Inpatient Quality Indicator is 20. For more information about this indicator, please visit the following link by copying and pasting the URL into your web browser:

[https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI\\_20\\_Pneumonia\\_Mortality\\_Rate.pdf](https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_20_Pneumonia_Mortality_Rate.pdf)

## Death Rate among Surgical Inpatients with Serious Treatable Complications

The Death Rate among Surgical Inpatients with Serious Treatable Complications is defined as the rate of in-hospital deaths per 1,000 surgical discharges among patients ages 18-89 years old or obstetric patients with serious treatable complications. General acute care hospitals report this measure by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding AHRQ Patient Safety Indicator is 04. For more information about this indicator, please visit the following link by copying and pasting the URL into your web browser:  
[https://qualityindicators.ahrq.gov/Downloads/Modules/PSI/V2023/TechSpecs/PSI\\_04\\_Death\\_Rate\\_among\\_Surgical\\_Inpatients\\_with\\_Serious\\_Treatable\\_Complications.pdf](https://qualityindicators.ahrq.gov/Downloads/Modules/PSI/V2023/TechSpecs/PSI_04_Death_Rate_among_Surgical_Inpatients_with_Serious_Treatable_Complications.pdf)

## California Maternal Quality Care Collaborative (CMQCC) Core Quality Measures

There are three core quality maternal measures adopted from the California Maternal Quality Care Collaborative (CMQCC).

### CMQCC Nulliparous, Term, Singleton, Vertex (NTSV) Cesarean Birth Rate

The CMQCC Nulliparous, Term, Singleton, Vertex (NTSV) Cesarean Birth Rate is defined as nulliparous women with a term (at least 37 weeks gestation), singleton baby in a vertex position delivered by cesarian birth. General acute care hospitals report the NTSV Cesarean Birth Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. For more information, please visit the following link by copying and pasting the URL into your web browser:

<https://www.cmqcc.org/quality-improvement-toolkits/supporting-vaginal-birth/ntsv-cesarean-birth-measure-specifications>

## CMQCC Vaginal Birth After Cesarean (VBAC) Rate

The CMQCC Vaginal Birth After Cesarean (VBAC) Rate is defined as vaginal births per 1,000 deliveries by patients with previous Cesarean deliveries. General acute care hospitals report the VBAC Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The VBAC Rate uses the specifications of AHRQ Inpatient Quality Indicator 22. For more information, please visit the following link by copying and pasting the URL into your web browser:

[https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI\\_22\\_Vaginal\\_Birth\\_After\\_Cesarean\\_\(VBAC\)\\_Delivery\\_Rate\\_Uncomplicated.pdf](https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_22_Vaginal_Birth_After_Cesarean_(VBAC)_Delivery_Rate_Uncomplicated.pdf)

Number of vaginal delivery among cases with previous Cesarean delivery that meet the inclusion and exclusion criteria

NA

Total number of birth discharges with previous Cesarean delivery that meet the inclusion and exclusion criteria

NA

Rate of vaginal delivery per 1,000 deliveries by patients with previous Cesarean deliveries

NA

## CMQCC Exclusive Breast Milk Feeding Rate

The CMQCC Exclusive Breast Milk Feeding Rate is defined as the newborns per 100 who reached at least 37 weeks of gestation (or 3000g if gestational age is missing) who received breast milk

exclusively during their stay at the hospital. Other criteria are that the newborns did not go to the neonatal intensive care unit (NICU), transfer, or die, did not reflect multiple gestation, and did not have codes for parenteral nutrition or galactosemia. General acute care hospitals report the Exclusive Breast Milk Feeding Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The CMQCC Exclusive Breast Milk Feeding Rate uses the Joint Commission National Quality Measure PC-05. For more information, please visit the following link by copying and pasting the URL into your web browser: <https://manual.jointcommission.org/releases/TJC2024B/MIF0170.html>

Number of newborn cases that were exclusively fed breast milk during their hospital stay and meet the inclusion and exclusion criteria

NA

Total number of newborn cases born in the hospital that meet the inclusion and exclusion criteria

NA

Rate of newborn cases per 100 that were exclusively fed breast milk during their hospital stay and meet the inclusion and exclusion criteria

NA

## HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate

General acute care hospitals are required to report several HCAI All-Cause Unplanned 30-Day Hospital Readmission Rates, which are broadly defined as the percentage of hospital-level, unplanned, all-cause readmissions after admission for eligible conditions within 30 days of hospital discharge for patients aged 18 years and older. These rates are first stratified based on any eligible condition, mental health disorders, substance use disorders, co-occurring disorders, and no behavioral health diagnosis. Then, each condition-stratified hospital readmission rate is further stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. For more information on the HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate, please visit the following link by copying and pasting the URL into your web browser:

[https://hcai.ca.gov/wp-content/uploads/2024/10/HCAI-All-Cause-Readmission-Rate-Exclusions\\_ADA.pdf](https://hcai.ca.gov/wp-content/uploads/2024/10/HCAI-All-Cause-Readmission-Rate-Exclusions_ADA.pdf)

## HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate – Any Eligible Condition

Number of inpatient hospital admissions which occurs within 30 days of the discharge date of an eligible index admission and were 18 years or older at time of admission

323

Total number of patients who were admitted to the general acute care hospital and were 18 years or older at time of admission

2400

Rate of hospital-level, unplanned, all-cause readmissions after admission for any eligible condition

within 30 days of hospital discharge for patients aged 18 and older

13.5

Table 10. HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate for any eligible condition by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

<b>Race and/or Ethnicity</b>	<b>Number of inpatient readmissions</b>	<b>Total number of admitted patients</b>	<b>Readmission rate (%)</b>

## Health Equity Plan

All general acute care hospitals report a health equity plan that identifies the top 10 disparities and a written plan to address them.

## Top 10 Disparities

Disparities for each hospital equity measure are identified by comparing the rate ratios by stratification groups. Rate ratios are calculated differently for measures with preferred low rates and those with preferred high rates. Rate ratios are calculated after applying the California Health and Human Services Agency's "Data De-Identification Guidelines (DDG)," dated September 23, 2016.

Table 15. Top 10 disparities and their rate ratio values.

Measures	Stratifications	Stratification Group	Stratification Rate	Reference Group	Reference Rate	Rate Ratio
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Race and/or Ethnicity	Black or African American	23.5	White	12.5	1.9
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Race and/or Ethnicity	Asian	21.2	White	12.5	1.7
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Age (excluding maternal measures)	65 and older	14.4	18 to 34	8.9	1.6
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Expected Payor	Medicare	14.6	Private	9.8	1.5
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Age (excluding maternal measures)	50 to 64	13.2	18 to 34	8.9	1.5
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Age (excluding maternal measures)	35 to 49	12.5	18 to 34	8.9	1.4
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Expected Payor	Medicaid	13.0	Private	9.8	1.3
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Sex Assigned at Birth	Male	15.4	Female	11.7	1.3
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Race and/or Ethnicity	Hispanic or Latino	13.2	White	12.5	1.1

#### Plan to address disparities identified in the data

Sharp Coronado Hospital and Healthcare Center (SCO) is actively engaged in advancing health equity through strategic planning and collaboration with Sharp Healthcare's system-wide initiatives. Upon analysis of structural and core quality measures stratified across nine sociodemographic variables, SCO identified disparities were all in the category of unplanned 30 -day hospital readmission rates. The identified disparity rate ratios span older age groups above 35 years old, males and minority populations. All the calculated rate ratios were between 1.1-1.9 which align with the proportions of populations that SCO serves. SCO is a small acute care community hospital (59 beds) with approximately 2800 discharges annually. It serves a diverse population representative of approximately 46% Caucasian, 35% Hispanic, 5% Black, 5 % Asian and 9% Other. Whilst the identified disparity rate ratios are not high, SCO remains committed to providing equitable care and proactively monitors and addresses disparities as they emerge. The hospital has a multidisciplinary readmission taskforce that reviews all readmissions to identify opportunities for improvement. There are several targeted interventions in place to address readmissions across multiple hospital disciplines and services. Patients who are at high risk for readmission are identified upon admission and their personalized care plans start being initiated and continue through the patient stay. The hospital has implemented a robust discharge process that includes educating patients on their medication and discharge instructions, scheduling follow-up appointments, and ensuring patients leave with necessary medications through the Discharge Prescription Services program. Discharge education is augmented by nursing leads and managers on the day of discharge as well as by virtual nurses. High risk patient populations are followed up through post-discharge phone calls. All admitted patients are screened for social determinants of health (SDOH), and those with identified needs are connected to community resources such as 211 San Diego and the Community Information Exchange (CIE).

As a member of the Sharp HealthCare system, SCO actively participates in the Sharp HealthCare Equity Advisory taskforce which supports alignment and collaboration across the health system. The system is currently focused on reducing readmissions across different populations and SCO

participates in this effort. Sharp HealthCare establishes annual goals to reduce both 30-day and 7-day readmissions. SCO also engages in other local, regional, and national efforts to reduce health disparities and promote best practices in equitable care. This includes ongoing evaluation of policies and practices to ensure equitable access and outcomes for all patients. The hospital's strategic efforts are designed to ensure that all individuals regardless of race, ethnicity, age, payor status, or other sociodemographic factors receive high-quality, compassionate, and equitable care.

## **Performance in the priority area**

General acute care hospitals are required to provide hospital equity plans that address the top 10 disparities by identifying population impact and providing measurable objectives and specific timeframes. For each disparity, hospital equity plans will address performance across priority areas: person-centered care, patient safety, addressing patient social drivers of health, effective treatment, care coordination, and access to care.

### **Person-centered care**

Sharp Coronado Hospital demonstrates a strong commitment to person-centered care through initiatives that prioritize compassionate communication, patient safety, and active engagement of patients, families, and communities throughout the care process. As a Planetree Gold Certified Hospital with Distinction, SCO continues to be recognized for its dedication to care that is inclusive, respectful, and tailored to meet the unique needs of those we serve. SCO's approach to person-centered care includes creating environments that foster inclusion and belonging, connecting staff to the purpose of their work, and implementing practical strategies that engage patients, families, and staff as partners in care. SCO consistently screens patients for language preferences and provides multilingual services supported by qualified interpreters to ensure clear and respectful communication. Discharge instructions and education materials are printed in preferred languages, and culturally tailored care initiatives are implemented to meet the diverse needs of our patient population. SCO maintains a diverse Patient and Family Partnership Council that collaborates with hospital leadership to co-design action plans and improve the patient experience. SCO also offers discharge prescription services to support continuity of care, and financial assistance programs to ensure access for underrepresented populations. The Substance Use Navigator (SUN) and substance abuse workgroup provide compassionate, evidence-based support for patients with substance use disorders. SCO is accredited by the American College of Emergency Physicians as a Geriatric Emergency Department, recognizing its commitment to high-quality care for older adults. Performance metrics reflect high patient experience scores across all domains, superior performance in the Cal Hospital Compare Opioid Honor Roll, and impactful community outreach and health education programs. SCO continuously monitors and evaluates person-centered care metrics and programs throughout the year to ensure measurable and sustained improvements in equitable care delivery.

### **Patient safety**

Sharp Coronado hospital is committed to high reliability and achieving zero harm and zero defects to employees, physicians, patients, and their families. The hospital strives to provide equitable health care and regularly reviews data to monitor if its services are indeed equitable and accessible to all. In early 2025, SCO added a bias/discrimination field in the patient safety event reporting system that

allows staff to report any incidents where they might have concerns that inequity may have been a causative variable in the event being reported. These events are carefully reviewed for opportunities for improvement.

Some of the programs and practices that highlight SCO's commitment to patient safety are Code Help

which allows patients and/or visitors to activate a rapid response evaluation independent of a hospital

staff member, use of clinical decision support in the electronic medical record, utilization of supporting

safety technology to reduce medication administration errors, distribution of a hospital wide culture of

safety survey to identify strengths and areas of improvement, robust hand hygiene program to reduce

the risk of healthcare associated infections, and electronic confidential internal safety event reporting

system for all workforce members. SCO closely measures and stratifies quality and safety metrics across sociodemographic variables looking for emerging disparities to ensure it is providing equitable

health care to all those we serve. Performance metrics and highlights include: 1) low rates of Patient

Safety Indicator occurrence, 2) low rates of serious safety events, 3) high rates of hand hygiene compliance, 4) low Emergency Department wait times and left without being seen rates, and 5) high

rates of safety technology compliance such as medication barcode scanning. Ongoing monitoring and

evaluation of metrics and programs happen throughout the year to ensure measurable and sustained

equitable safe patient care.

#### Addressing patient social drivers of health

Sharp Coronado Hospital (SCO) is committed to advancing health equity through comprehensive screening, analysis, and intervention for social determinants of health (SDOH). Leveraging EMR integrated tools, SCO has achieved a high screening rate of 82% for inpatient admissions who have

been screened for all five SDOH domains namely food security, housing, transportation, utility and interpersonal safety. All patients who screen positive for at least one SDOH domain receive an automatic referral to a social worker, enabling timely identification and resolution of unmet needs. To

support data-driven decision-making, SCO utilizes a Health Equity Dashboard that stratifies SDOH data

by race, ethnicity, language, age, and payor. As of March 2025, SCO has achieved an intervention rate

of 67%, with nursing, case management, and social work teams actively engaging patients to address

identified social needs. These interventions reflect a coordinated effort to ensure patients receive comprehensive support alongside clinical care. SCO's intervention strategies include:

- Direct support services such as transportation, medication access, food assistance, multilingual support, financial aid, and charity care.
- Care coordination through appointment scheduling prior to discharge and warm handoffs to

community resources.

- Community partnerships with 211 San Diego, Community Information Exchange (CIE), and other local organizations to facilitate referrals and post-discharge support.
  - Specialized programs including the Emergency Department High Utilizer Group (HUG) and Human Trafficking response initiatives, which address complex social and behavioral health needs.
- SCO actively participates in the system-wide Health Equity Advisory Taskforce, contributing to strategic planning and alignment across Sharp HealthCare. Staff engagement in SDOH efforts is supported through ongoing education and training for social workers, case managers, and nursing leadership. These sessions emphasize best practices in SDOH screening, referral workflows, and community resource navigation. To ensure sustainability and scalability, SCO conducts regular evaluations of its SDOH programs and metrics. These efforts reflect a strategic commitment to improving the well-being of all patients by addressing both clinical and social needs. Through high screening rates, targeted interventions, and strong community collaboration, SCO continues to advance health equity and foster a culture of holistic, patient-centered care.

## **Performance in the priority area continued**

Performance across all of the following priority areas.

### **Effective treatment**

Sharp Coronado Hospital and Healthcare Center is committed to ensuring evidence based, timely, and appropriate care for all patients. This is accomplished by ensuring care team members practice in line with nationally recognized evidence based clinical guidelines of care and protocols. Clinical Pathways for several disease conditions have been made available to ensure effective and equitable treatment. Nursing also creates individualized Nursing Care Plans that are evaluated on a regular basis to ensure continuity and quality of care. Examples of programs and practices that highlight the effectiveness of care at SCO include the deployment of the Rapid Response Team for rapid management of deteriorating patients, the Heart Failure Taskforce aimed at monitoring heart failure care and outcomes, the Mortality and Readmission Reduction Taskforce, the deployment of Safe Medication Practice pharmacists who help guide optimal medication dosing and administration practices, the Antibiotic Stewardship program aimed at improving our antibiotic prescribing practices, and patient education programs for patient empowerment. Demonstrable evidence of the effective care SCO provides include SCO's CMS 5-star rating, multiple Joint Commission disease specific certifications and top decile performance in patient experience surveys. Ongoing monitoring and evaluation of metrics and programs happens throughout the year to ensure measurable and sustained effective treatment.

### **Care coordination**

SCO facilitates smooth transitions between inpatient care, primary care, and specialty services by leveraging both entity-level and system-wide resources. Multidisciplinary discharge planning includes coordination with external providers and services to ensure continuity of care beyond hospitalization. SCO's care coordination efforts are supported using shared electronic health records, enabling timely access to patient information across care teams and reducing gaps in communication.

In March 2024, Sharp HealthCare implemented a new EMR system to enhance care coordination across the continuum. SCO has adopted this system to improve integration between outpatient and inpatient settings. The EMR transition has streamlined provider communication, reduced errors, and improved access to real-time patient data. Additionally, the Sharp App empowers patients to manage their care by scheduling appointments, messaging providers, and accessing lab results. These communications are visible to inpatient teams, supporting informed decision-making and continuity of care.

SCO's care coordination also extends to vulnerable and unfunded patients. Key initiatives that reflect SCO's care coordination strategy include:

- Expanding use of Epic Community Connect and Epic Carelink to increase Provider engagement and ease-of-practice across the continuum
- Structured follow-up phone calls to support patients after discharge and reinforce care plans.
- Use of Community Information Exchange (CIE), 211 and other local agencies to connect patients with geographically aligned community resources that support patients' post discharge needs including food, transportation and housing assistance.
- Staff actively assisting patients with Medi-Cal enrollment and ensure referrals are offered and documented.
- Recruitment of diverse team members who align with SCO's values and culture of equity.
- Robust volunteer program that supports patient engagement and care transitions.

Through these coordinated efforts, SCO continues to advance health equity by delivering integrated, patient-centered care that addresses both clinical and social needs.

#### Access to care

Sharp Coronado Hospital is committed to improving access to care by addressing barriers such as transportation, language, and financial constraints. Programs supporting these efforts include multilingual services, financial assistance, extended business hours, and structured referral pathways to community organizations including charity groups and federally qualified health clinics. SCO's case management and social work teams collaborate with primary care clinics and community partners to ensure timely follow-up and discharge planning. The Sharp App supports patient engagement by allowing appointment scheduling, secure messaging, and access to lab results, improving continuity and reducing gaps in care. Performance metrics such as low Emergency Department wait and boarding times, timely outpatient diagnostics, and community outreach activities reflect SCO's commitment to access and equity. Patient feedback is regularly sought to evaluate any access challenges patients are facing that SCO can improve. Sharp Coronado remains dedicated to the community it serves and continues to innovate in advancing equitable access to care.

## Methodology Guidelines

Did the hospital follow the methodology in the Measures Submission Guide? (Y/N)
