

# Hospital Equity Measures Report

## General Information

Report Type:	Hospital Equity Measures Report
Year:	2024
Hospital Name:	LA PALMA INTERCOMMUNITY HOSPITAL
Facility Type:	General Acute Care Hospital
Hospital HCAI ID:	106301234
Report Period:	01/01/2024 - 12/31/2024
Status:	Complete
Due Date:	11/29/2025
Last Updated:	02/06/2026
Hospital Location with Clean Water and Air:	Y
Hospital Web Address for Equity Report:	<a href="https://lapalmaintercommunityhospital.com/">https://lapalmaintercommunityhospital.com/</a>

## Overview

Assembly Bill No. 1204 requires the Department of Health Care Access and Information (HCAI) to develop and administer a Hospital Equity Measures Reporting Program to collect and post summaries of key hospital performance and patient outcome data regarding sociodemographic information, including but not limited to age, sex, race/ethnicity, payor type, language, disability status, and sexual orientation and gender identity.

Hospitals (general acute, children's, and acute psychiatric) and hospital systems are required to annually submit their reports to HCAI. These reports contain summaries of each measure, the top 10 disparities, and the equity plans to address the identified disparities. HCAI is required to maintain a link on the HCAI website that provides access to the content of hospital equity measures reports and equity plans to the public. All submitted hospitals are required to post their reports on their websites, as well.

## Laws and Regulations

For more information on Assembly Bill No. 1204, please visit the following link by copying and pasting the URL into your web browser:

[https://leginfo.legislature.ca.gov/faces/billTextClient.xhtml?bill\\_id=202120220AB1204](https://leginfo.legislature.ca.gov/faces/billTextClient.xhtml?bill_id=202120220AB1204)

## Hospital Equity Measures

### Joint Commission Accreditation

General acute care hospitals are required to report three structural measures based on the Commission Accreditation's Health Care Disparities Reduction and Patient-Centered Communication Accreditation Standards. For more information on these measures, please visit the following link by copying and pasting the URL into your web browser:

<https://www.jointcommission.org/standards/r3-report/r3-report-issue-36-new-requirements-to-reduce>

-health-care-disparities/

The first two structural measures are scored as "yes" or "no"; the third structural measure comprises the percentages of patients by five categories of preferred languages spoken, in addition to one other/ unknown language category.

Designate an individual to lead hospital health equity activities (Y = Yes, N = No).

Y

Provide documentation of policy prohibiting discrimination (Y = Yes, N = No).

Y

Number of patients that were asked their preferred language, five defined categories and one other/ unknown languages category.

15944

Table 1. Summary of preferred languages reported by patients.

Languages	Number of patients who report preferring language	Total number of patients	Percentage of total patients who report preferring language (%)
English Language	13781	15944	86.4
Spanish Language	1491	15944	9.4
Asian Pacific Islander Languages	487	15944	3.1
Middle Eastern Languages	suppressed	15944	suppressed
American Sign Language	suppressed	15944	suppressed
Other Languages	suppressed	15944	suppressed

**Centers for Medicare & Medicaid Services (CMS) Hospital Commitment to Health Equity Structural (HCHE) Measure**

There are five domains that make up the CMS Hospital Commitment to HCHE measures. Each domain is scored as "yes" or "no." In order to score "yes," a general acute care hospital is required to confirm all the domain's attestations. Lack of one or more of the attestations results in a score of "no." For more information on the CMS Hospital Commitment to HCHE measures, please visit the following link by copying and pasting the URL into your web browser:

<https://data.cms.gov/provider-data/topics/hospitals/health-equity>

**Centers for Medicare & Medicaid Services (CMS) Hospital Commitment to Health Equity Structural (HCHE) Measure Domain 1: Strategic Planning (Yes/No)**

- Our hospital strategic plan identifies priority populations who currently experience health disparities.
- Our hospital strategic plan identifies healthcare equity goals and discrete action steps to achieve these goals.
- Our hospital strategic plan outlines specific resources that have been dedicated to achieving our equity goals.
- Our hospital strategic plan describes our approach for engaging key stakeholders, such as community-based organizations.

Y

**CMS HCHE Measure Domain 2: Data Collection (Yes/No)**

- Our hospital strategic plan identifies healthcare equity goals and discrete action steps to achieve these goals.

- Our hospital has training for staff in culturally sensitive collection of demographics and/or social determinant of health information.
- Our hospital inputs demographic and/or social determinant of health information collected from patients into structured, interoperable data elements using a certified electronic health record (EHR) technology.

Y

CMS HCHE Measure Domain 3: Data Analysis (Yes/No)

- Our hospital stratifies key performance indicators by demographic and/or social determinants of health variables to identify equity gaps and includes this information in hospital performance dashboards.

Y

CMS HCHE Measure Domain 4: Quality Improvement (Yes/No)

- Our hospital participates in local, regional or national quality improvement activities focused on reducing health disparities.

Y

CMS HCHE Measure Domain 5: Leadership Engagement (Yes/No)

- Our hospital senior leadership, including chief executives and the entire hospital board of trustees, annually reviews our strategic plan for achieving health equity.
- Our hospital senior leadership, including chief executives and the entire hospital board of trustees, annually review key performance indicators stratified by demographic and/or social factors.

Y

Centers for Medicare & Medicaid Services (CMS) Social Drivers of Health (SDOH)

General acute care hospitals are required to report on rates of screenings and intervention rates among patients above 18 years old for five health related social needs (HRSN), which are food insecurity, housing instability, transportation problems, utility difficulties, and interpersonal safety. These rates are reported separately as being screened as positive for any of the five HRSNs, positive for each individual HRSN, and the intervention rate for each positively screened HRSN. For more information on the CMS SDOH, please visit the following link by copying and pasting the URL into your web browser:

<https://www.cms.gov/priorities/innovation/key-concepts/social-drivers-health-and-health-related-social-needs>

Number of patients admitted to an inpatient hospital stay who are 18 years or older on the date of admission and are screened for all of the five HRSN

415

Total number of patients who are admitted to a hospital inpatient stay and who are 18 years or older on the date of admission

1536

Rate of patients admitted for an inpatient hospital stay who are 18 years or older on the date of admission, were screened for an HRSN, and who screened positive for one or more of the HRSNs

27.0

Table 2. Positive screening rates and intervention rates for the five Health Related Social Needs of the Centers of Medicare & Medicaid Services (CMS) Social Drivers of Health (SDOH).

Social Driver of Health	Number of positive screenings	Rate of positive screenings (%)	Number of positive screenings who received intervention	Rate of positive screenings who received intervention (%)
Food Insecurity	37	9.0	0	
Housing Instability	51	12.0	0	
Transportation Problems	17	4.0	0	
Utility Difficulties	15	4.0	0	
Interpersonal Safety	suppressed	suppressed	suppressed	

## Core Quality Measures for General Acute Care Hospitals

There are two quality measures from the Hospital Consumer Assessment of Healthcare Providers and Systems (HCAHPS) survey. For more information on the HCAHPS survey, please visit the following link by copying and pasting the URL into your web browser:

<https://hcahpsonline.org/en/survey-instruments/>

## Patient Recommends Hospital

The first HCAHPS quality measure is the percentage of patients who would recommend the hospital to friends and family. For this measure, general acute care hospitals provide the percentage of patient respondents who responded "probably yes" or "definitely yes" to whether they would recommend the hospital, the percentage of the people who responded to the survey (i.e., the response rate), and the inputs for the percentages. The percentages and inputs are stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding HCAHPS question number is 19.

Number of respondents who replied "probably yes" or "definitely yes" to HCAHPS Question 19, "Would you recommend this hospital to your friends and family?"

341

Total number of respondents to HCAHPS Question 19

375

Percentage of total respondents who responded "probably yes" or "definitely yes" to HCAHPS Question 19

90.9

Total number of people surveyed on HCAHPS Question 19

1630

Response rate, or the percentage of people who responded to HCAHPS Question 19

23.0

Table 3. Patient recommends hospital by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

<b>Race and/or Ethnicity</b>	<b>Number of "probably yes" or "definitely yes" responses</b>	<b>Total number of responses</b>	<b>Percent of "probably yes" or "definitely yes" responses (%)</b>	<b>Total number of patients surveyed</b>	<b>Response rate of patients surveyed (%)</b>

Female-to-male (FTM)/ transgender male/trans man					
Male					
Male-to-female (MTF)/ transgender female/trans woman					
Non-conforming gender					
Additional gender category or other					
Not disclosed					

## Patient Received Information in Writing

The second HCAHPS quality measure is the percentage of patients who reported receiving information in writing on symptoms and health problems to look out for after leaving the hospital. General acute care hospitals are required to provide the percentage of patient respondents who responded "yes" to being provided written information, the percentage of the people who responded to the survey (i.e., the response rate), and the inputs for these percentages. These percentages and inputs are stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding HCAHPS question number is 17.

Number of respondents who replied "yes" to HCAHPS Question 17, "During this hospital stay, did you get information in writing about what symptoms or health problems to look out for after you left the

hospital?"

304  
Total number of respondents to HCAHPS Question 17  
375

Percentage of respondents who responded "yes" to HCAHPS Question 17  
81.1

Total number of people surveyed on HCAHPS Question 17  
1630

Response rate, or the percentage of people who responded to HCAHPS Question 17  
23.0

Table 4. Patient reports receiving information in writing about symptoms or health problems by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

## Agency for Healthcare Research and Quality (AHRQ) Indicators

General acute care hospitals are required to report on two indicators from the Agency for Healthcare Research and Quality (AHRQ). For general information about AHRQ indicators, please visit the following link by copying and pasting the URL into your web browser:

<https://qualityindicators.ahrq.gov/>

## Pneumonia Mortality Rate

The Pneumonia Mortality Rate is defined as the rate of in-hospital deaths per 1,000 hospital discharges with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission for patients ages 18 years and older. General acute care hospitals report the Pneumonia Mortality Rate by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding AHRQ Inpatient Quality Indicator is 20. For more information about this indicator, please visit the following link by copying and pasting the URL into your web browser:

[https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI\\_20\\_Pneumonia\\_Mortality\\_Rate.pdf](https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_20_Pneumonia_Mortality_Rate.pdf)

## Death Rate among Surgical Inpatients with Serious Treatable Complications

The Death Rate among Surgical Inpatients with Serious Treatable Complications is defined as the rate of in-hospital deaths per 1,000 surgical discharges among patients ages 18-89 years old or obstetric patients with serious treatable complications. General acute care hospitals report this measure by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding AHRQ Patient Safety Indicator is 04. For more information about this indicator, please visit the following link by copying and pasting the URL into your web browser:  
[https://qualityindicators.ahrq.gov/Downloads/Modules/PSI/V2023/TechSpecs/PSI\\_04\\_Death\\_Rate\\_among\\_Surgical\\_Inpatients\\_with\\_Serious\\_Treatable\\_Complications.pdf](https://qualityindicators.ahrq.gov/Downloads/Modules/PSI/V2023/TechSpecs/PSI_04_Death_Rate_among_Surgical_Inpatients_with_Serious_Treatable_Complications.pdf)

## California Maternal Quality Care Collaborative (CMQCC) Core Quality Measures

There are three core quality maternal measures adopted from the California Maternal Quality Care Collaborative (CMQCC).

### CMQCC Nulliparous, Term, Singleton, Vertex (NTSV) Cesarean Birth Rate

The CMQCC Nulliparous, Term, Singleton, Vertex (NTSV) Cesarean Birth Rate is defined as nulliparous women with a term (at least 37 weeks gestation), singleton baby in a vertex position delivered by cesarian birth. General acute care hospitals report the NTSV Cesarean Birth Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. For more information, please visit the following link by copying and pasting the URL into your web browser:

<https://www.cmqcc.org/quality-improvement-toolkits/supporting-vaginal-birth/ntsv-cesarean-birth-measure-specifications>

## CMQCC Vaginal Birth After Cesarean (VBAC) Rate

The CMQCC Vaginal Birth After Cesarean (VBAC) Rate is defined as vaginal births per 1,000 deliveries by patients with previous Cesarean deliveries. General acute care hospitals report the VBAC Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The VBAC Rate uses the specifications of AHRQ Inpatient Quality Indicator 22. For more information, please visit the following link by copying and pasting the URL into your web browser:

[https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI\\_22\\_Vaginal\\_Birth\\_After\\_Cesarean\\_\(VBAC\)\\_Delivery\\_Rate\\_Uncomplicated.pdf](https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_22_Vaginal_Birth_After_Cesarean_(VBAC)_Delivery_Rate_Uncomplicated.pdf)

Number of vaginal delivery among cases with previous Cesarean delivery that meet the inclusion and exclusion criteria

NA

Total number of birth discharges with previous Cesarean delivery that meet the inclusion and exclusion criteria

NA

Rate of vaginal delivery per 1,000 deliveries by patients with previous Cesarean deliveries

NA

## CMQCC Exclusive Breast Milk Feeding Rate

The CMQCC Exclusive Breast Milk Feeding Rate is defined as the newborns per 100 who reached at least 37 weeks of gestation (or 3000g if gestational age is missing) who received breast milk

exclusively during their stay at the hospital. Other criteria are that the newborns did not go to the neonatal intensive care unit (NICU), transfer, or die, did not reflect multiple gestation, and did not have codes for parenteral nutrition or galactosemia. General acute care hospitals report the Exclusive Breast Milk Feeding Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The CMQCC Exclusive Breast Milk Feeding Rate uses the Joint Commission National Quality Measure PC-05. For more information, please visit the following link by copying and pasting the URL into your web browser: <https://manual.jointcommission.org/releases/TJC2024B/MIF0170.html>

Number of newborn cases that were exclusively fed breast milk during their hospital stay and meet the inclusion and exclusion criteria

NA

Total number of newborn cases born in the hospital that meet the inclusion and exclusion criteria

NA

Rate of newborn cases per 100 that were exclusively fed breast milk during their hospital stay and meet the inclusion and exclusion criteria

NA

## HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate

General acute care hospitals are required to report several HCAI All-Cause Unplanned 30-Day Hospital Readmission Rates, which are broadly defined as the percentage of hospital-level, unplanned, all-cause readmissions after admission for eligible conditions within 30 days of hospital discharge for patients aged 18 years and older. These rates are first stratified based on any eligible condition, mental health disorders, substance use disorders, co-occurring disorders, and no behavioral health diagnosis. Then, each condition-stratified hospital readmission rate is further stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. For more information on the HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate, please visit the following link by copying and pasting the URL into your web browser:

[https://hcai.ca.gov/wp-content/uploads/2024/10/HCAI-All-Cause-Readmission-Rate-Exclusions\\_ADA.pdf](https://hcai.ca.gov/wp-content/uploads/2024/10/HCAI-All-Cause-Readmission-Rate-Exclusions_ADA.pdf)

## HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate – Any Eligible Condition

Number of inpatient hospital admissions which occurs within 30 days of the discharge date of an eligible index admission and were 18 years or older at time of admission

334

Total number of patients who were admitted to the general acute care hospital and were 18 years or older at time of admission

2091

Rate of hospital-level, unplanned, all-cause readmissions after admission for any eligible condition

within 30 days of hospital discharge for patients aged 18 and older

16.0

Table 10. HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate for any eligible condition by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

<b>Race and/or Ethnicity</b>	<b>Number of inpatient readmissions</b>	<b>Total number of admitted patients</b>	<b>Readmission rate (%)</b>

## Health Equity Plan

All general acute care hospitals report a health equity plan that identifies the top 10 disparities and a written plan to address them.

## Top 10 Disparities

Disparities for each hospital equity measure are identified by comparing the rate ratios by stratification groups. Rate ratios are calculated differently for measures with preferred low rates and those with preferred high rates. Rate ratios are calculated after applying the California Health and Human Services Agency's "Data De-Identification Guidelines (DDG)," dated September 23, 2016.

Table 15. Top 10 disparities and their rate ratio values.

Measures	Stratifications	Stratification Group	Stratification Rate	Reference Group	Reference Rate	Rate Ratio
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Race and/or Ethnicity	White	19.2	Asian	13.8	1.4
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Age (excluding maternal measures)	18 to 34	15.4	35 to 49	13.6	1.3
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Expected Payor	Medicaid	14.6	Private	12.6	1.3
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Expected Payor	Medicare	14.2	Private	12.6	1.3
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Race and/or Ethnicity	Black or African American	16.8	Asian	13.8	1.2
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Age (excluding maternal measures)	65 and older	16.4	35 to 49	13.6	1.2
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Age (excluding maternal measures)	50 to 64	13.1	35 to 49	13.6	1.1
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Sex Assigned at Birth	Female	16.5	Male	15.4	1.1
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Race and/or Ethnicity	Asian	12.9	Asian	13.8	1.0

## Plan to address disparities identified in the data

### Facility Quality Improvement Plan

#### Addressing Disparities in Readmissions and Mortality

La Palma Intercommunity Hospital is committed to delivering high-quality, cost-effective, and patient-centered healthcare with compassion, dignity, and respect for every patient and family. A key priority is addressing disparities in all-cause unplanned 30day hospital readmissions

#### Identified Disparities

Analysis of outcomes demonstrates significant variation in readmissions and mortality by age, gender, race, and payor type

#### Key findings include

##### Race or Ethnicity

White patients have 16.2% higher 30day unplanned readmissions compared to Hispanic patients (12%)

African American patients have 15.3% higher 30day unplanned readmissions compared to Hispanic patients (12%)

Asian patients have 12.9% higher 30day unplanned readmissions compared to Hispanic patients (12%)

##### Payor Type

Medi-Cal patients (14.6%) and Medicare patients (14.2%) have higher 30-day unplanned readmissions compared to private insurance (10.8%)

##### Age & Gender

Patients aged 18 to 34 years have 15.4% higher 30day unplanned readmissions compared to patients aged 35 to 49 years (12.7%)

Patients greater than or equal to 65 years have 14.2% higher 30day unplanned readmissions compared to patients aged 35 to 49 years (12.7%)

Female patients demonstrate 14.3% higher 30day unplanned readmissions compared to male patients (13.4%)  
Patients aged 50 to 64 years show 13.1% higher unplanned readmissions compared to those aged 35 to 49 years (12.7%)

#### Facility Objectives

##### 1.Reduce Unplanned Readmissions

Achieve a 10% reduction in all-cause unplanned 30-day hospital readmissions for each disparity group within 12 months

##### 2.Strengthen Post-Discharge Support

Conduct targeted post-discharge phone calls on sample of high-volume readmissions (congestive heart failure and pneumonia)

Assess continuity of care, including appointments, medications, durable medical equipment, home health, and other post-discharge needs

##### 3.Enhance Case Management Oversight

Hold weekly interdisciplinary case management meetings (case managers, clinical directors, providers) to review patients meeting disparity criteria

Identify barriers to care and close gaps by linking patients to community resources and support services

##### 4.Readmission Review and Quality Oversight

Perform retrospective review of high-volume readmissions (congestive heart failure and pneumonia) to the same facility to identify clinical and social determinants influencing outcomes

Reviews will be conducted by the quality management department and physician reviewers

Findings and improvement opportunities will be discussed with case management and social services teams

## Performance in the priority area

General acute care hospitals are required to provide hospital equity plans that address the top 10 disparities by identifying population impact and providing measurable objectives and specific timeframes. For each disparity, hospital equity plans will address performance across priority areas: person-centered care, patient safety, addressing patient social drivers of health, effective treatment, care coordination, and access to care.

### Person-centered care

Patient-centered care remains a fundamental priority for the facility. From the moment of arrival and throughout the hospital stay, every patient is screened for language preferences, and qualified interpreters are readily available to ensure effective communication. Interpreter services are accessible 24/7 by phone, and discharge instructions are translated to support patient and family understanding. This approach empowers patients and their families to participate actively in care planning and decision-making. Patient voices are further integrated through bedside shift-change handoff reports and interdisciplinary care team rounds at the bedside. Informed consent practices ensure patients are fully aware of the benefits and risks of their procedures, while discharge planning incorporates patient and family preferences in selecting post-acute care providers.

The facility partners with a patient experience vendor to collect and analyze patient experience data across race, ethnicity, and language. This data is applied to enhance cultural and religious sensitivity, particularly during end-of-life care. Social workers are engaged proactively based on nursing assessments of patient needs, with pastoral care available upon request. Through collaboration with case management and social work teams, patients are routinely screened for

food insecurity, housing instability, transportation challenges, intimate partner violence, financial hardship, stress, physical activity, and social connections. When needs are identified, social worker consultations are triggered, and appropriate community resources are arranged prior to discharge. The facility's commitment to equity and social responsibility has been recognized nationally. It received an "A" grade for social responsibility from the Lown Institute in the 2025 to 2026 Hospitals Index. The hospital also earned "A" grades in Health Equity, Patient Outcomes, Clinical Outcomes, Inclusivity, and Pay Equity, ranking among the nation's top hospitals based on strong performance across these areas. Facility is ranked 22 out of 258 hospitals in California and in the top 250 hospitals nationally on the social responsibility metric. This recognition reflects the organization's dedication to providing equitable, patient-centered, and community-focused care.

#### Patient safety

Patient Safety is the facility's highest priority, with focused efforts on reducing risks, preventing harm, and ensuring equity in care. Safety metrics including falls, medication errors, pressure ulcers, and readmissions are tracked across demographic groups to identify trends and address disparities.

A key initiative targets reducing readmissions for congestive heart failure (CHF) and pneumonia. Special attention is given to vulnerable populations, including homeless patients, through coordinated referrals for housing, bedside medication delivery, timely post-discharge appointments, and partnerships with community food networks. From January 2024 to June 2025, 80% of qualified CHF patients were discharged with a follow-up appointment, significantly improving continuity of care.

Patient and family engagement is reinforced through inclusive rounding practices that respect cultural, religious, racial, ethnic, age, and gender considerations. Families are consistently informed of care plans, condition changes, and safety concerns to strengthen trust and transparency. For staff, the facility invests in equity-focused training and professional development. Clinical teams receive continuing education on cultural competence, social determinants of health, and safe discharge planning, while leaders complete training in diversity, equity, inclusion, and allyship. These integrated strategies support for vulnerable patients, transparent patient engagement, and staff development demonstrate the facility's commitment to safe, equitable, and high-quality care delivery.

#### Addressing patient social drivers of health

Addressing Patient Social Determinants of Health remains a top priority for the facility. In alignment with The Joint Commission National Patient Safety Goals, leadership collaborated with internal teams, the Information and Technology Department, the Quality Improvement Organization (QIO) Health Services Advisory Group, Inc. (HSAG), and patient experience vendors to analyze disparities and health equity data. This analysis highlighted several areas requiring focused attention. Tobacco Use: 93/5248 patients from Jan-April 2023 are at high risk of Tobacco Use. The facility continues to assess patients on tobacco risk and provide resources. Readmissions Data: HSAG analysis of all-cause unplanned readmissions (12/2021 to 11/2022) concluded Caucasians have highest readmissions with 26%. When it comes to age, elder patients tend to have more readmissions compared to younger patients. Out of all the Medicare discharges, 44% of patients came back to the facility. Strong post-acute care provider relations through business development, case management, and leadership are an ongoing process.

Facility readmissions (July 2021 to June 2024) for congestive heart failure remain above the national average at 26% (vs. 20%), and pneumonia readmissions are 20% (vs. 16%). For 2025 through June, CHF readmission to the same facility is 5% and pneumonia 19%. Data monitoring continues for disparity trends.

Patient Experience: CMS-submitted adjusted 2021 and 2022 data revealed that 17% of patients

aged 65+ scored lower on Explanation of New Medicine, 13% scored lower on New Medicine Side Effects, and 8% scored lower on Understood Medicine Purpose compared to younger patients. This project was prioritized for health equity, focusing on improving discharge education and medication understanding. Key initiatives included (1) discharge education led by primary nurses with structured medication guides, and (2) pharmacist-led support for high-risk patients. Patient experience data showed improvement: in 2021, 88.9% of patients aged 65+ reported usually or always receiving information on the purpose of medication; this increased to 89.9% by June 2025. Similarly, 78.8% reported usually or always receiving information on side effects in 2021, dropping to 70.2% by June 2025. These metrics confirm positive progress, and the facility remains committed to ongoing monitoring and targeted equity-based interventions.

## **Performance in the priority area continued**

Performance across all of the following priority areas.

### **Effective treatment**

Providing evidence-based, timely, and effective treatment is a priority of the facility. As per facility policy, all patients, irrespective of race, age, gender, ethnicity, or financial status, receive safe and equitable care. Based on the analysis, health disparities were identified that prompted the clinical team to build equity into clinical decision support. As mentioned above, performance metrics have shown variation by subgroup. For example, based on the readmission analysis for congestive heart failure patients, it was noted that Medicare patients constituted 86% of the total readmissions during the first half of 2025. To address this, the facility is implementing EMR alert modifications and targeted staff education to close the gap. Upon arrival and during hospitalization, the nursing team assesses patients for social determinants of health, which triggers social worker consultation when needed. The case management team then works closely with patients to connect them to appropriate community resources. A post-discharge appointment is arranged before patients leave the facility to ensure continuity of care. Additionally, case management has initiated a new process that includes follow-up phone calls after discharge to check on patients and address unmet needs. To support this initiative, weekly case management meetings are conducted with clinical directors, case managers, and providers to review patients who meet disparity-related criteria and to monitor outcomes.

### **Care coordination**

Care Coordination is a priority of the hospital to ensure care is organized across providers, settings, and time. Upon arrival, the emergency room staff initiates the social determinants of health assessment, which triggers social worker consultation for high-risk patients in the areas of food insecurity, housing instability, transportation needs, stress, intimate partner violence, financial resource strain, physical inactivity, and social connections. Discharge planning begins at admission, with social workers collaborating with patients and families to identify post-discharge needs. The Case Management team coordinates with insurance companies and community partners to offer resources and ensure a smooth transition back into the community. For example, at discharge, homeless patients are provided with access to Orange County housing resources, connected with CalAIM to find stable housing, and referred to Illumination for continuity of care. The facility also partners with Active Pharmacy to deliver medications at bedside prior to discharge, while providing weather-appropriate clothing and arranging transportation. For uninsured patients, the admitting team initiates Medi-Cal screening and applications for emergency medical coverage, ensuring hospital care and essential post-discharge follow-up. This proactive approach reduces gaps in care and avoids preventable readmissions. Uninsured patients, who often face overwhelming medical

bills, are guided toward state resources for financial assistance. By aligning medical treatment with social support, the hospital ensures comprehensive care coordination that addresses both clinical and non-clinical needs, ultimately improving patient outcomes and community health.

#### Access to care

Access to care is a priority of the facility, achieved through timely and culturally appropriate services. From January through August 2025, the facility treated patients of which 67% were Medicare and 25% were Medi-Cal. Homelessness, lack of insurance, and underinsurance remain significant barriers to care; therefore, the clinical team partners closely with case management and social workers to bridge care gaps following discharge. For patients with mental health needs, the facility collaborates with community partners for shelter placement, outreach, and engagement. During this period, the facility recorded 11,376 emergency room visits, contributing to longer wait times and saturation of services. To address this, the facility implemented Fast Track Care, an initiative that enables patients to schedule emergency room visits in under two minutes via QR code, text, or the hospital website. This innovation allows patients to bypass long waits while enabling the facility to better anticipate patient volumes and allocate resources effectively.

### **Methodology Guidelines**

Did the hospital follow the methodology in the Measures Submission Guide? (Y/N)
