

Hospital Equity Measures Report

General Information

Report Type:	Hospital Equity Measures Report
Year:	2024
Hospital Name:	SAN ANTONIO REGIONAL HOSPITAL
Facility Type:	General Acute Care Hospital
Hospital HCAI ID:	106361318
Report Period:	1/1/2024 - 12/31/2024
Status:	Complete
Due Date:	11/29/2025
Last Updated:	02/04/2026
Hospital Location with Clean Water and Air:	N
Hospital Web Address for Equity Report:	https://www.sarh.org/

Overview

Assembly Bill No. 1204 requires the Department of Health Care Access and Information (HCAI) to develop and administer a Hospital Equity Measures Reporting Program to collect and post summaries of key hospital performance and patient outcome data regarding sociodemographic information, including but not limited to age, sex, race/ethnicity, payor type, language, disability status, and sexual orientation and gender identity.

Hospitals (general acute, children's, and acute psychiatric) and hospital systems are required to annually submit their reports to HCAI. These reports contain summaries of each measure, the top 10 disparities, and the equity plans to address the identified disparities. HCAI is required to maintain a link on the HCAI website that provides access to the content of hospital equity measures reports and equity plans to the public. All submitted hospitals are required to post their reports on their websites, as well.

Laws and Regulations

For more information on Assembly Bill No. 1204, please visit the following link by copying and pasting the URL into your web browser:

https://leginfo.legislature.ca.gov/faces/billTextClient.xhtml?bill_id=202120220AB1204

Hospital Equity Measures

Joint Commission Accreditation

General acute care hospitals are required to report three structural measures based on the Commission Accreditation's Health Care Disparities Reduction and Patient-Centered Communication Accreditation Standards. For more information on these measures, please visit the following link by copying and pasting the URL into your web browser:

<https://www.jointcommission.org/standards/r3-report/r3-report-issue-36-new-requirements-to-reduce>

-health-care-disparities/

The first two structural measures are scored as "yes" or "no"; the third structural measure comprises the percentages of patients by five categories of preferred languages spoken, in addition to one other/ unknown language category.

Designate an individual to lead hospital health equity activities (Y = Yes, N = No).

Y

Provide documentation of policy prohibiting discrimination (Y = Yes, N = No).

Y

Number of patients that were asked their preferred language, five defined categories and one other/ unknown languages category.

108663

Table 1. Summary of preferred languages reported by patients.

Languages	Number of patients who report preferring language	Total number of patients	Percentage of total patients who report preferring language (%)
English Language	98601	108663	90.7
Spanish Language	8730	108663	8
Asian Pacific Islander Languages	805	108663	0.7
Middle Eastern Languages	313	108663	0.3
American Sign Language	suppressed	108663	suppressed
Other Languages	suppressed	108663	suppressed

Centers for Medicare & Medicaid Services (CMS) Hospital Commitment to Health Equity Structural (HCHE) Measure

There are five domains that make up the CMS Hospital Commitment to HCHE measures. Each domain is scored as "yes" or "no." In order to score "yes," a general acute care hospital is required to confirm all the domain's attestations. Lack of one or more of the attestations results in a score of "no." For more information on the CMS Hospital Commitment to HCHE measures, please visit the following link by copying and pasting the URL into your web browser:

<https://data.cms.gov/provider-data/topics/hospitals/health-equity>

Centers for Medicare & Medicaid Services (CMS) Hospital Commitment to Health Equity Structural (HCHE) Measure Domain 1: Strategic Planning (Yes/No)

- Our hospital strategic plan identifies priority populations who currently experience health disparities.
- Our hospital strategic plan identifies healthcare equity goals and discrete action steps to achieve these goals.
- Our hospital strategic plan outlines specific resources that have been dedicated to achieving our equity goals.
- Our hospital strategic plan describes our approach for engaging key stakeholders, such as community-based organizations.

Y

CMS HCHE Measure Domain 2: Data Collection (Yes/No)

- Our hospital strategic plan identifies healthcare equity goals and discrete action steps to achieve these goals.

- Our hospital has training for staff in culturally sensitive collection of demographics and/or social determinant of health information.
- Our hospital inputs demographic and/or social determinant of health information collected from patients into structured, interoperable data elements using a certified electronic health record (EHR) technology.

Y

CMS HCHE Measure Domain 3: Data Analysis (Yes/No)

- Our hospital stratifies key performance indicators by demographic and/or social determinants of health variables to identify equity gaps and includes this information in hospital performance dashboards.

Y

CMS HCHE Measure Domain 4: Quality Improvement (Yes/No)

- Our hospital participates in local, regional or national quality improvement activities focused on reducing health disparities.

Y

CMS HCHE Measure Domain 5: Leadership Engagement (Yes/No)

- Our hospital senior leadership, including chief executives and the entire hospital board of trustees, annually reviews our strategic plan for achieving health equity.
- Our hospital senior leadership, including chief executives and the entire hospital board of trustees, annually review key performance indicators stratified by demographic and/or social factors.

Y

Centers for Medicare & Medicaid Services (CMS) Social Drivers of Health (SDOH)

General acute care hospitals are required to report on rates of screenings and intervention rates among patients above 18 years old for five health related social needs (HRSN), which are food insecurity, housing instability, transportation problems, utility difficulties, and interpersonal safety. These rates are reported separately as being screened as positive for any of the five HRSNs, positive for each individual HRSN, and the intervention rate for each positively screened HRSN. For more information on the CMS SDOH, please visit the following link by copying and pasting the URL into your web browser:

<https://www.cms.gov/priorities/innovation/key-concepts/social-drivers-health-and-health-related-social-needs>

Number of patients admitted to an inpatient hospital stay who are 18 years or older on the date of admission and are screened for all of the five HRSN

15123

Total number of patients who are admitted to a hospital inpatient stay and who are 18 years or older on the date of admission

16986

Rate of patients admitted for an inpatient hospital stay who are 18 years or older on the date of admission, were screened for an HRSN, and who screened positive for one or more of the HRSNs

89

Table 2. Positive screening rates and intervention rates for the five Health Related Social Needs of the Centers of Medicare & Medicaid Services (CMS) Social Drivers of Health (SDOH).

Social Driver of Health	Number of positive screenings	Rate of positive screenings (%)	Number of positive screenings who received intervention	Rate of positive screenings who received intervention (%)
Food Insecurity	27	0.2	0	0
Housing Instability	284	1.9	0	0
Transportation Problems	27	0.2	0	0
Utility Difficulties	26	0.2	0	0
Interpersonal Safety	30	0.2	0	0

Core Quality Measures for General Acute Care Hospitals

There are two quality measures from the Hospital Consumer Assessment of Healthcare Providers and Systems (HCAHPS) survey. For more information on the HCAHPS survey, please visit the following link by copying and pasting the URL into your web browser:

<https://hcahpsonline.org/en/survey-instruments/>

Patient Recommends Hospital

The first HCAHPS quality measure is the percentage of patients who would recommend the hospital to friends and family. For this measure, general acute care hospitals provide the percentage of patient respondents who responded "probably yes" or "definitely yes" to whether they would recommend the hospital, the percentage of the people who responded to the survey (i.e., the response rate), and the inputs for the percentages. The percentages and inputs are stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding HCAHPS question number is 19.

Number of respondents who replied "probably yes" or "definitely yes" to HCAHPS Question 19, "Would you recommend this hospital to your friends and family?"

2041

Total number of respondents to HCAHPS Question 19

2219

Percentage of total respondents who responded "probably yes" or "definitely yes" to HCAHPS Question 19

92

Total number of people surveyed on HCAHPS Question 19

10567

Response rate, or the percentage of people who responded to HCAHPS Question 19

21

Table 3. Patient recommends hospital by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

Race and/or Ethnicity	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
American Indian or Alaska Native					
Asian					
Black or African American					
Hispanic or Latino					
Middle Eastern or North African					
Multiracial and/or Multiethnic (two or more races)					
Native Hawaiian or Pacific Islander					
White					

Age	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Age < 18					
Age 18 to 34					
Age 35 to 49					
Age 50 to 64					
Age 65 Years and Older					

Sex assigned at birth	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Female					
Male					
Unknown					

Payer Type	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Medicare					
Medicaid					
Private					
Self-Pay					
Other					

Preferred Language	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
English Language					
Spanish Language					
Asian Pacific Islander Languages					
Middle Eastern Languages					
American Sign Language					
Other/Unknown Languages					

Disability Status	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Does not have a disability					
Has a mobility disability					
Has a cognition disability					
Has a hearing disability					
Has a vision disability					
Has a self-care disability					
Has an independent living disability					

Sexual Orientation	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Lesbian, gay or homosexual					
Straight or heterosexual					
Bisexual

Female-to-male (FTM)/ transgender male/trans man					
Male					
Male-to-female (MTF)/ transgender female/trans woman					
Non-conforming gender					
Additional gender category or other					
Not disclosed					

Patient Received Information in Writing

The second HCAHPS quality measure is the percentage of patients who reported receiving information in writing on symptoms and health problems to look out for after leaving the hospital. General acute care hospitals are required to provide the percentage of patient respondents who responded "yes" to being provided written information, the percentage of the people who responded to the survey (i.e., the response rate), and the inputs for these percentages. These percentages and inputs are stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding HCAHPS question number is 17.

Number of respondents who replied "yes" to HCAHPS Question 17, "During this hospital stay, did you get information in writing about what symptoms or health problems to look out for after you left the

hospital?"

1842

Total number of respondents to HCAHPS Question 17

2219

Percentage of respondents who responded "yes" to HCAHPS Question 17

83

Total number of people surveyed on HCAHPS Question 17

10567

Response rate, or the percentage of people who responded to HCAHPS Question 17

21

Table 4. Patient reports receiving information in writing about symptoms or health problems by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

Race and/or Ethnicity	Number of "yes" responses	Total number of responses	Percentage of "yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)

Agency for Healthcare Research and Quality (AHRQ) Indicators

General acute care hospitals are required to report on two indicators from the Agency for Healthcare Research and Quality (AHRQ). For general information about AHRQ indicators, please visit the following link by copying and pasting the URL into your web browser:

<https://qualityindicators.ahrq.gov/>

Pneumonia Mortality Rate

The Pneumonia Mortality Rate is defined as the rate of in-hospital deaths per 1,000 hospital discharges with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission for patients ages 18 years and older. General acute care hospitals report the Pneumonia Mortality Rate by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding AHRQ Inpatient Quality Indicator is 20. For more information about this indicator, please visit the following link by copying and pasting the URL into your web browser:

https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_20_Pneumonia_Mortality_Rate.pdf

Number of in-hospital deaths with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission

65

Total number of hospital discharges with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission

780

Rate of in-hospital deaths per 1,000 hospital discharges with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission

83.3

Death Rate among Surgical Inpatients with Serious Treatable Complications

The Death Rate among Surgical Inpatients with Serious Treatable Complications is defined as the rate of in-hospital deaths per 1,000 surgical discharges among patients ages 18-89 years old or obstetric patients with serious treatable complications. General acute care hospitals report this measure by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding AHRQ Patient Safety Indicator is 04. For more information about this indicator, please visit the following link by copying and pasting the URL into your web browser:

California Maternal Quality Care Collaborative (CMQCC) Core Quality Measures

There are three core quality maternal measures adopted from the California Maternal Quality Care Collaborative (CMQCC).

CMQCC Nulliparous, Term, Singleton, Vertex (NTSV) Cesarean Birth Rate

The CMQCC Nulliparous, Term, Singleton, Vertex (NTSV) Cesarean Birth Rate is defined as nulliparous women with a term (at least 37 weeks gestation), singleton baby in a vertex position delivered by cesarian birth. General acute care hospitals report the NTSV Cesarean Birth Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. For more information, please visit the following link by copying and pasting the URL into your web browser:

<https://www.cmqcc.org/quality-improvement-toolkits/supporting-vaginal-birth/ntsv-cesarean-birth-measure-specifications>

CMQCC Vaginal Birth After Cesarean (VBAC) Rate

The CMQCC Vaginal Birth After Cesarean (VBAC) Rate is defined as vaginal births per 1,000 deliveries by patients with previous Cesarean deliveries. General acute care hospitals report the VBAC Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The VBAC Rate uses the specifications of AHRQ Inpatient Quality Indicator 22. For more information, please visit the following link by copying and pasting the URL into your web browser:

[https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_22_Vaginal_Birth_After_Cesarean_\(VBAC\)_Delivery_Rate_Uncomplicated.pdf](https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_22_Vaginal_Birth_After_Cesarean_(VBAC)_Delivery_Rate_Uncomplicated.pdf)

CMQCC Exclusive Breast Milk Feeding Rate

The CMQCC Exclusive Breast Milk Feeding Rate is defined as the newborns per 100 who reached at least 37 weeks of gestation (or 3000g if gestational age is missing) who received breast milk

exclusively during their stay at the hospital. Other criteria are that the newborns did not go to the neonatal intensive care unit (NICU), transfer, or die, did not reflect multiple gestation, and did not have codes for parenteral nutrition or galactosemia. General acute care hospitals report the Exclusive Breast Milk Feeding Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The CMQCC Exclusive Breast Milk Feeding Rate uses the Joint Commission National Quality Measure PC-05. For more information, please visit the following link by copying and pasting the URL into your web browser: <https://manual.jointcommission.org/releases/TJC2024B/MIF0170.html>

Number of newborn cases that were exclusively fed breast milk during their hospital stay and meet the inclusion and exclusion criteria

213

Total number of newborn cases born in the hospital that meet the inclusion and exclusion criteria

344

Rate of newborn cases per 100 that were exclusively fed breast milk during their hospital stay and meet the inclusion and exclusion criteria

61.9

HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate

General acute care hospitals are required to report several HCAI All-Cause Unplanned 30-Day Hospital Readmission Rates, which are broadly defined as the percentage of hospital-level, unplanned, all-cause readmissions after admission for eligible conditions within 30 days of hospital discharge for patients aged 18 years and older. These rates are first stratified based on any eligible condition, mental health disorders, substance use disorders, co-occurring disorders, and no behavioral health diagnosis. Then, each condition-stratified hospital readmission rate is further stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. For more information on the HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate, please visit the following link by copying and pasting the URL into your web browser:

https://hcai.ca.gov/wp-content/uploads/2024/10/HCAI-All-Cause-Readmission-Rate-Exclusions_ADA.pdf

HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate – Any Eligible Condition

Number of inpatient hospital admissions which occurs within 30 days of the discharge date of an eligible index admission and were 18 years or older at time of admission

1781

Total number of patients who were admitted to the general acute care hospital and were 18 years or older at time of admission

13182

Rate of hospital-level, unplanned, all-cause readmissions after admission for any eligible condition

within 30 days of hospital discharge for patients aged 18 and older

13.5

Health Equity Plan

All general acute care hospitals report a health equity plan that identifies the top 10 disparities and a written plan to address them.

Top 10 Disparities

Disparities for each hospital equity measure are identified by comparing the rate ratios by stratification groups. Rate ratios are calculated differently for measures with preferred low rates and those with preferred high rates. Rate ratios are calculated after applying the California Health and Human Services Agency's "Data De-Identification Guidelines (DDG)," dated September 23, 2016.

Table 15. Top 10 disparities and their rate ratio values.

Measures	Stratifications	Stratification Group	Stratification Rate	Reference Group	Reference Rate	Rate Ratio
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Age (excluding maternal measures)	65 and older	15.6	18 to 34	5.3	3
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Age (excluding maternal measures)	50 to 64	15	18 to 34	5.3	2.8
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Age (excluding maternal measures)	35 to 49	12.7	18 to 34	5.3	2.4
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Expected Payor	Medicare	16.7	Private	7.4	2.3
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Preferred Language	Spanish Language	15	English Language	13.4	2.2

HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Race and/or Ethnicity	White	14.2	Asian	9.8	1.5
Agency for Healthcare Research and Quality (AHRQ) Quality Indicator Pneumonia Mortality Rate	Age (excluding maternal measures)	65 and older	95.9	50 to 64	72.4	1.3
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Race and/or Ethnicity	Hispanic or Latino	12.8	Asian	9.8	1.3

Plan to address disparities identified in the data

Readmission has been one of our top priorities for the last year and it continues to be one for the next year as well. SARH implemented a multi - disciplinary task force. It was sponsored by our Chief Population Health Officer and Co-chaired by Chief Nursing Officer.

Nursing departments played a major role by bringing in issues and gaps that were seen on the floor, to everyone's attention.

Based on the gap analysis, our Performance Improvement team's focus in 2025 has been on improving education handed out to patients admitted for AMI, COPD, CHF , Pneumonia and Cardiac procedures.

* Pharmacy department introduced Meds - to - Beds to reduce preventable readmissions especially due to medication non - compliance.

* We have our in - house DME Closet Dispensing process which is facilitated by Case Management and the medical equipment company. CM is responsible for maintaining the par levels.

All Cause Readmissions for CY 2025 have been in the 30th percentile when compared nationwide. It is projected to improve and move upto the 50th percentile in 2026.

This has been made possible due to improvements seen in Condition Specific areas like HF, AMI and COPD.

Performance in the priority area

General acute care hospitals are required to provide hospital equity plans that address the top 10 disparities by identifying population impact and providing measurable objectives and specific timeframes. For each disparity, hospital equity plans will address performance across priority areas:

person-centered care, patient safety, addressing patient social drivers of health, effective treatment, care coordination, and access to care.

Person-centered care

SARH demonstrates a strong commitment to person-centered care by actively engaging patients and families in shaping the care experience through its Patient Family Advisory Council (PFAC). This council provides valuable feedback that informs hospital policies, care practices, and quality improvement initiatives, ensuring that patient voices are central to decision-making. Our teams emphasize cultural responsiveness and shared decision-making, offering translation services, both physician and nursing care are culturally tailored and individualized using the patients perspective and preferences. Care plans are individualized to address both medical needs and social determinants of health, reducing barriers to access and improving outcomes. These efforts have led to measurable improvements in patient satisfaction scores and a narrowing of disparities in patient experience across diverse populations. Looking ahead, SARH is committed to establishing a robust Patient Experience Department that will serve as a hub for advancing person-centered practices. This department will include comprehensive customer service training for all employees and onboarding programs for new hires, embedding respect, empathy, and responsiveness into every interaction. Together, these initiatives reflect SARH's dedication to delivering care that is not only clinically effective but also deeply respectful of the individual needs, values, and voices of the patients and families we serve.

Patient safety

Patient Safety is a SARH strategic goal.

Starting with our Executive leadership commitment towards safe environment of care to our patients, it is embedded in our safety culture. Adverse outcomes like Falls, pressure injuries are discussed in depth to gain insights and learning opportunities. Physician peer review process which has a direct impact on Ongoing Professional Physician evaluation process has executive and Board level oversight.

SARH prioritizes pain management and safe medication management which are monitored on a regular basis. We promote safe and competent staffing ratios, according to the skill mix, at all levels of care and departments to meet patient needs.

Addressing patient social drivers of health

*Community Health Screenings offered through hospital-sponsored events in partnership with local schools, faith organizations, and senior centers include blood pressure, glucose, cholesterol, and physician consultations onsite at no cost to underserved populations in our service areas.

*We offer workshops through our Generations Ahead program, which supports social connection and positive aging. We also provide numerous health education and community engagement events which offers preventive health education and resource navigation.

* Homelessness: Referrals to Inland Empire Health Plan (IEHP) Housing Navigation Services, City of Upland Housing Division, Foothill Family Shelter, and Path of Life Ministries for temporary and permanent housing placement.

* Food Insecurity: Direct linkage to Inland Valley Hope Partners, Community Action Partnership Food Pantries, Sprouts Nutrition Classes, and CalFresh enrollment assistance through CHW teams.

* Utility Bills: Connection to Southern California Edison CARE Program, San Bernardino County Community Action Partnership Utility Assistance Program, and LIHEAP for energy support.

* Interpersonal Safety: Immediate warm handoffs to House of Ruth and San Bernardino County Domestic Violence Hotline; CHWs trained in trauma-informed approaches ensure confidential support.

* Financial Assistance: Referrals to Hospital Financial Counselors for charity care and Medi-Cal

presumptive eligibility, 211 Inland SoCal for rent and bill support, and local faith-based financial aid programs coordinated through HCI's community partners.

Through these collective efforts, San Antonio Regional Hospital and the Lewis–San Antonio Healthy Communities Institute continue to advance equitable access, improve population health outcomes, and uphold the hospital's mission to enhance the health and well-being of our community. This work is guided by the Vital Conditions Framework, in which Community Health Needs Assessments identify priority areas, and the hospital develops targeted strategies to address them.

Performance in the priority area continued

Performance across all of the following priority areas.

Effective treatment

- * Risk Adjusted mortality reduction is a strategic goal for SARH. It is our mission to provide and safe and effective treatment to our committee. We have a physician - led sepsis committee. It is attended by nursing leadership to bring issues, discuss challenges and brainstorm action plans.

- *Visual Quality Boards on every unit provide regular information to our staff on our QAPI projects for complete transparency. We are proud to have staff involvement in committees and task forces that ensures that real issues from the nursing units are shared, with leadership is in attendance. This enables sustainable action plans.

- *SARH values staff training. We have advanced skills day for our critical care nursing staff in addition to annual skills to reinforce specialized care for the higher acuity patients. We also offer cross training between telemetry and critical care, which is offered by the help of the individual department educators. For the last two years we have built a transition to practice education platform to help our new grad nurses adapt to their new role as nurses. This new transition to practice has increased our retention of newer nurses. We also have an education coordinator that oversees hospital wide education/training to meet continuous quality improvement.

Care coordination

SARH continues to have a Readmission task force. We continue to focus on :

- * Follow up visits for our discharged patients. High risk patients are seen within 7 days of discharge in our CARE4U clinic and referred as needed.

- * Pharmacy department tracks Meds - to - Beds on a monthly basis and shares it with Executive leadership which ensures departmental accountability and compliance towards achieving benchmark, as per strategic goal set by the Board.

- * Nursing departments diligently educate our patients and ensure information retention in patients through teach-back method on follow up days.

We have seen a huge drop in our readmission numbers which were preventable.

Access to care

- * All patients are provided a packet that includes a plain language summary about our Financial Assistance Program along with an application. We also have an on site San Bernardino County Medi-Cal Eligibility Worker and another on - site vendor who assist patients whenever required.

- * All ED patients who do not have insurance coverage are screened on the spot for Hospital Presumptive Eligibility through Medi-Cal. If the patient qualifies, they are covered through Medi-Cal for the current month and the following calendar month. They are also provided information about CalWORKs and CalFresh.

- * For patients who are admitted to the hospital, we provide the same assistance as our ED patients.

- * Case Management and/or Social Workers also have the ability to request assistance for obtaining coverage for patients if there is a discharge need or a need for future care that they patient will not be able to afford. We again exhaust all efforts to assist the patient to ensure they have the coverage they need.
- * SARH provides charity or partial - pay charity to patients who may not qualify for state, federal, county or other assistance and have no reasonable means to pay.

Methodology Guidelines

Did the hospital follow the methodology in the Measures Submission Guide? (Y/N)
