

# Hospital Equity Measures Report

## General Information

Report Type:	Hospital Equity Measures Report
Year:	2024
Hospital Name:	SHARP MARY BIRCH HOSPITAL FOR WOMEN AND NEWBORNS
Facility Type:	General Acute Care Hospital
Hospital HCAI ID:	106370695
Report Period:	1/1/24 - 12/31/24
Status:	Complete
Due Date:	11/29/2025
Last Updated:	03/10/2026
Hospital Location with Clean Water and Air:	N
Hospital Web Address for Equity Report:	<a href="https://www.sharp.com/about/quality">https://www.sharp.com/about/quality</a>

## Overview

Assembly Bill No. 1204 requires the Department of Health Care Access and Information (HCAI) to develop and administer a Hospital Equity Measures Reporting Program to collect and post summaries of key hospital performance and patient outcome data regarding sociodemographic information, including but not limited to age, sex, race/ethnicity, payor type, language, disability status, and sexual orientation and gender identity.

Hospitals (general acute, children's, and acute psychiatric) and hospital systems are required to annually submit their reports to HCAI. These reports contain summaries of each measure, the top 10 disparities, and the equity plans to address the identified disparities. HCAI is required to maintain a link on the HCAI website that provides access to the content of hospital equity measures reports and equity plans to the public. All submitted hospitals are required to post their reports on their websites, as well.

## Laws and Regulations

For more information on Assembly Bill No. 1204, please visit the following link by copying and pasting the URL into your web browser:  
[https://leginfo.legislature.ca.gov/faces/billTextClient.xhtml?bill\\_id=202120220AB1204](https://leginfo.legislature.ca.gov/faces/billTextClient.xhtml?bill_id=202120220AB1204)

## Hospital Equity Measures

### Joint Commission Accreditation

General acute care hospitals are required to report three structural measures based on the Commission Accreditation's Health Care Disparities Reduction and Patient-Centered Communication Accreditation Standards. For more information on these measures, please visit the following link by copying and pasting the URL into your web browser:

The first two structural measures are scored as "yes" or "no"; the third structural measure comprises the percentages of patients by five categories of preferred languages spoken, in addition to one other/unknown language category.

Designate an individual to lead hospital health equity activities (Y = Yes, N = No).

Y

Provide documentation of policy prohibiting discrimination (Y = Yes, N = No).

Y

Number of patients that were asked their preferred language, five defined categories and one other/unknown languages category.

18439

Table 1. Summary of preferred languages reported by patients.

Languages	Number of patients who report preferring language	Total number of patients	Percentage of total patients who report preferring language (%)
English Language	18004	18439	97.6
Spanish Language	334	18439	1.8
Asian Pacific Islander Languages	suppressed	18439	suppressed
Middle Eastern Languages	suppressed	18439	suppressed
American Sign Language	suppressed	18439	suppressed
Other Languages	suppressed	18439	suppressed

Centers for Medicare & Medicaid Services (CMS) Hospital Commitment to Health Equity Structural (HCHE) Measure

There are five domains that make up the CMS Hospital Commitment to HCHE measures. Each domain is scored as "yes" or "no." In order to score "yes," a general acute care hospital is required to confirm all the domain's attestations. Lack of one or more of the attestations results in a score of "no." For more information on the CMS Hospital Commitment to HCHE measures, please visit the following link by copying and pasting the URL into your web browser:

https://data.cms.gov/provider-data/topics/hospitals/health-equity

Centers for Medicare & Medicaid Services (CMS) Hospital Commitment to Health Equity Structural (HCHE) Measure Domain 1: Strategic Planning (Yes/No)

- Our hospital strategic plan identifies priority populations who currently experience health disparities.
- Our hospital strategic plan identifies healthcare equity goals and discrete action steps to achieve these goals.
- Our hospital strategic plan outlines specific resources that have been dedicated to achieving our equity goals.
- Our hospital strategic plan describes our approach for engaging key stakeholders, such as community-based organizations.

Y

CMS HCHE Measure Domain 2: Data Collection (Yes/No)

- Our hospital strategic plan identifies healthcare equity goals and discrete action steps to achieve these goals.
- Our hospital has training for staff in culturally sensitive collection of demographics and/or social determinant of health information.
- Our hospital inputs demographic and/or social determinant of health information collected from patients into structured, interoperable data elements using a certified electronic health record (EHR) technology.

Y

CMS HCHE Measure Domain 3: Data Analysis (Yes/No)

- Our hospital stratifies key performance indicators by demographic and/or social determinants of health variables to identify equity gaps and includes this information in hospital performance dashboards.

Y

CMS HCHE Measure Domain 4: Quality Improvement (Yes/No)

- Our hospital participates in local, regional or national quality improvement activities focused on reducing health disparities.

Y

CMS HCHE Measure Domain 5: Leadership Engagement (Yes/No)

- Our hospital senior leadership, including chief executives and the entire hospital board of trustees, annually reviews our strategic plan for achieving health equity.
- Our hospital senior leadership, including chief executives and the entire hospital board of trustees, annually review key performance indicators stratified by demographic and/or social factors.

Y

Centers for Medicare & Medicaid Services (CMS) Social Drivers of Health (SDOH)

General acute care hospitals are required to report on rates of screenings and intervention rates among patients above 18 years old for five health related social needs (HRSN), which are food insecurity, housing instability, transportation problems, utility difficulties, and interpersonal safety. These rates are reported separately as being screened as positive for any of the five HRSNs, positive for each individual HRSN, and the intervention rate for each positively screened HRSN. For more information on the CMS SDOH, please visit the following link by copying and pasting the URL into your web browser:

<https://www.cms.gov/priorities/innovation/key-concepts/social-drivers-health-and-health-related-social-needs>

Number of patients admitted to an inpatient hospital stay who are 18 years or older on the date of admission and are screened for all of the five HRSN

1554

Total number of patients who are admitted to a hospital inpatient stay and who are 18 years or older on the date of admission

10599

Rate of patients admitted for an inpatient hospital stay who are 18 years or older on the date of admission, were screened for an HRSN, and who screened positive for one or more of the HRSNs

14.6

Table 2. Positive screening rates and intervention rates for the five Health Related Social Needs of the Centers of Medicare & Medicaid Services (CMS) Social Drivers of Health (SDOH).

Social Driver of Health	Number of positive screenings	Rate of positive screenings (%)	Number of positive screenings who received intervention	Rate of positive screenings who received intervention (%)
Food Insecurity	181	11.6	119	7.7
Housing Instability	276	17.8	181	11.6
Transportation Problems	205	13.2	138	8.9
Utility Difficulties	155	9.9	105	6.8
Interpersonal Safety	212	13.6	146	9.4

## Core Quality Measures for General Acute Care Hospitals

There are two quality measures from the Hospital Consumer Assessment of Healthcare Providers and Systems (HCAHPS) survey. For more information on the HCAHPS survey, please visit the following link by copying and pasting the URL into your web browser:

<https://hcahpsonline.org/en/survey-instruments/>

## Patient Recommends Hospital

The first HCAHPS quality measure is the percentage of patients who would recommend the hospital to friends and family. For this measure, general acute care hospitals provide the percentage of patient respondents who responded "probably yes" or "definitely yes" to whether they would recommend the hospital, the percentage of the people who responded to the survey (i.e., the response rate), and the inputs for the percentages. The percentages and inputs are stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding HCAHPS question number is 19.

Number of respondents who replied "probably yes" or "definitely yes" to HCAHPS Question 19, "Would you recommend this hospital to your friends and family?"

3772

Total number of respondents to HCAHPS Question 19

3929

Percentage of total respondents who responded "probably yes" or "definitely yes" to HCAHPS Question 19

96

Total number of people surveyed on HCAHPS Question 19

21828

Response rate, or the percentage of people who responded to HCAHPS Question 19

18

Table 3. Patient recommends hospital by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

<b>Race and/or Ethnicity</b>	<b>Number of "probably yes" or "definitely yes" responses</b>	<b>Total number of responses</b>	<b>Percent of "probably yes" or "definitely yes" responses (%)</b>	<b>Total number of patients surveyed</b>	<b>Response rate of patients surveyed (%)</b>
<b>American Indian or Alaska Native</b>					
<b>Asian</b>					
<b>Black or African American</b>					
<b>Hispanic or Latino</b>

Not disclosed					

  

<b>Gender Identity</b>	<b>Number of "probably yes" or "definitely yes" responses</b>	<b>Total number of responses</b>	<b>Percent of "probably yes" or "definitely yes" responses (%)</b>	<b>Total number of patients surveyed</b>	<b>Response rate of patients surveyed (%)</b>
Female					
Female-to-male (FTM)/ transgender male/trans man					
Male					
Male-to-female (MTF)/ transgender female/trans woman					
Non-conforming gender					
Additional gender category or other					
Not disclosed					

## Patient Received Information in Writing

The second HCAHPS quality measure is the percentage of patients who reported receiving information in writing on symptoms and health problems to look out for after leaving the hospital. General acute care hospitals are required to provide the percentage of patient respondents who responded "yes" to being provided written information, the percentage of the people who responded to the survey (i.e., the response rate), and the inputs for these percentages. These percentages and inputs are stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding HCAHPS question number is 17.

Number of respondents who replied "yes" to HCAHPS Question 17, "During this hospital stay, did you get information in writing about what symptoms or health problems to look out for after you left the

hospital?"

3458

Total number of respondents to HCAHPS Question 17

3929

Percentage of respondents who responded "yes" to HCAHPS Question 17

88

Total number of people surveyed on HCAHPS Question 17

21828

Response rate, or the percentage of people who responded to HCAHPS Question 17

18

Table 4. Patient reports receiving information in writing about symptoms or health problems by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

<b>Race and/or Ethnicity</b>	<b>Number of "yes" responses</b>	<b>Total number of responses</b>	<b>Percentage of "yes" responses (%)</b>	<b>Total number of patients surveyed</b>	<b>Response rate of patients surveyed (%)</b>
<b>American Indian or Alaska Native</b>

## Agency for Healthcare Research and Quality (AHRQ) Indicators

General acute care hospitals are required to report on two indicators from the Agency for Healthcare Research and Quality (AHRQ). For general information about AHRQ indicators, please visit the following link by copying and pasting the URL into your web browser:

<https://qualityindicators.ahrq.gov/>

## Pneumonia Mortality Rate

The Pneumonia Mortality Rate is defined as the rate of in-hospital deaths per 1,000 hospital discharges with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission for patients ages 18 years and older. General acute care hospitals report the Pneumonia Mortality Rate by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding AHRQ Inpatient Quality Indicator is 20. For more information about this indicator, please visit the following link by copying and pasting the URL into your web browser:

[https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI\\_20\\_Pneumonia\\_Mortality\\_Rate.pdf](https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_20_Pneumonia_Mortality_Rate.pdf)

## Death Rate among Surgical Inpatients with Serious Treatable Complications

The Death Rate among Surgical Inpatients with Serious Treatable Complications is defined as the rate of in-hospital deaths per 1,000 surgical discharges among patients ages 18-89 years old or obstetric patients with serious treatable complications. General acute care hospitals report this measure by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding AHRQ Patient Safety Indicator is 04. For more information about this indicator, please visit the following link by copying and pasting the URL into your web browser:  
[https://qualityindicators.ahrq.gov/Downloads/Modules/PSI/V2023/TechSpecs/PSI\\_04\\_Death\\_Rate\\_among\\_Surgical\\_Inpatients\\_with\\_Serious\\_Treatable\\_Complications.pdf](https://qualityindicators.ahrq.gov/Downloads/Modules/PSI/V2023/TechSpecs/PSI_04_Death_Rate_among_Surgical_Inpatients_with_Serious_Treatable_Complications.pdf)

## California Maternal Quality Care Collaborative (CMQCC) Core Quality Measures

There are three core quality maternal measures adopted from the California Maternal Quality Care Collaborative (CMQCC).

### CMQCC Nulliparous, Term, Singleton, Vertex (NTSV) Cesarean Birth Rate

The CMQCC Nulliparous, Term, Singleton, Vertex (NTSV) Cesarean Birth Rate is defined as nulliparous women with a term (at least 37 weeks gestation), singleton baby in a vertex position delivered by cesarian birth. General acute care hospitals report the NTSV Cesarean Birth Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. For more information, please visit the following link by copying and pasting the URL into your web browser:

<https://www.cmqcc.org/quality-improvement-toolkits/supporting-vaginal-birth/ntsv-cesarean-birth-measure-specifications>

## CMQCC Vaginal Birth After Cesarean (VBAC) Rate

The CMQCC Vaginal Birth After Cesarean (VBAC) Rate is defined as vaginal births per 1,000 deliveries by patients with previous Cesarean deliveries. General acute care hospitals report the VBAC Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The VBAC Rate uses the specifications of AHRQ Inpatient Quality Indicator 22. For more information, please visit the following link by copying and pasting the URL into your web browser:

[https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI\\_22\\_Vaginal\\_Birth\\_After\\_Cesarean\\_\(VBAC\)\\_Delivery\\_Rate\\_Uncomplicated.pdf](https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_22_Vaginal_Birth_After_Cesarean_(VBAC)_Delivery_Rate_Uncomplicated.pdf)

Number of vaginal delivery among cases with previous Cesarean delivery that meet the inclusion and exclusion criteria

NA

Total number of birth discharges with previous Cesarean delivery that meet the inclusion and exclusion criteria

NA

Rate of vaginal delivery per 1,000 deliveries by patients with previous Cesarean deliveries

NA

## CMQCC Exclusive Breast Milk Feeding Rate

The CMQCC Exclusive Breast Milk Feeding Rate is defined as the newborns per 100 who reached at least 37 weeks of gestation (or 3000g if gestational age is missing) who received breast milk

exclusively during their stay at the hospital. Other criteria are that the newborns did not go to the neonatal intensive care unit (NICU), transfer, or die, did not reflect multiple gestation, and did not have codes for parenteral nutrition or galactosemia. General acute care hospitals report the Exclusive Breast Milk Feeding Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The CMQCC Exclusive Breast Milk Feeding Rate uses the Joint Commission National Quality Measure PC-05. For more information, please visit the following link by copying and pasting the URL into your web browser: <https://manual.jointcommission.org/releases/TJC2024B/MIF0170.html>

Number of newborn cases that were exclusively fed breast milk during their hospital stay and meet the inclusion and exclusion criteria

NA

Total number of newborn cases born in the hospital that meet the inclusion and exclusion criteria

NA

Rate of newborn cases per 100 that were exclusively fed breast milk during their hospital stay and meet the inclusion and exclusion criteria

NA

## HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate

General acute care hospitals are required to report several HCAI All-Cause Unplanned 30-Day Hospital Readmission Rates, which are broadly defined as the percentage of hospital-level, unplanned, all-cause readmissions after admission for eligible conditions within 30 days of hospital discharge for patients aged 18 years and older. These rates are first stratified based on any eligible condition, mental health disorders, substance use disorders, co-occurring disorders, and no behavioral health diagnosis. Then, each condition-stratified hospital readmission rate is further stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. For more information on the HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate, please visit the following link by copying and pasting the URL into your web browser:

[https://hcai.ca.gov/wp-content/uploads/2024/10/HCAI-All-Cause-Readmission-Rate-Exclusions\\_ADA.pdf](https://hcai.ca.gov/wp-content/uploads/2024/10/HCAI-All-Cause-Readmission-Rate-Exclusions_ADA.pdf)

## HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate – Any Eligible Condition

Number of inpatient hospital admissions which occurs within 30 days of the discharge date of an eligible index admission and were 18 years or older at time of admission

390

Total number of patients who were admitted to the general acute care hospital and were 18 years or older at time of admission

7468

Rate of hospital-level, unplanned, all-cause readmissions after admission for any eligible condition

within 30 days of hospital discharge for patients aged 18 and older

## 5.2

Table 10. HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate for any eligible condition by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

## Health Equity Plan

All general acute care hospitals report a health equity plan that identifies the top 10 disparities and a written plan to address them.

## Top 10 Disparities

Disparities for each hospital equity measure are identified by comparing the rate ratios by stratification groups. Rate ratios are calculated differently for measures with preferred low rates and those with preferred high rates. Rate ratios are calculated after applying the California Health and Human Services Agency's "Data De-Identification Guidelines (DDG)," dated September 23, 2016.

Table 15. Top 10 disparities and their rate ratio values.

Measures	Stratifications	Stratification Group	Stratification Rate	Reference Group	Reference Rate	Rate Ratio
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Race and/or Ethnicity	Black or African American	12	Asian	3	8
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Race and/or Ethnicity	Hispanic or Latino	5.6	Asian	3	3.7
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Race and/or Ethnicity	White	4.2	Asian	3	2.8
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Expected Payor	Medicaid	8.9	Private	4.2	2.1
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Age (excluding maternal measures)	65 and older	9.9	35 to 49	5	2
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Expected Payor	Medicare	6.9	Private	4.2	1.6
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Age (excluding maternal measures)	50 to 64	6.2	35 to 49	5	1.2
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Age (excluding maternal measures)	18 to 34	5.1	35 to 49	5	1

## Plan to address disparities identified in the data

Sharp Mary Birch Hospital is actively working to advance health equity through strategic initiatives. The hospital collaborates with Sharp Healthcare on both entity-specific and system-wide efforts. These initiatives focus on identifying priority populations experiencing health disparities, setting health equity goals, developing action plans to achieve these goals, and engaging key stakeholders across the organization. This comprehensive approach aims to address and reduce health disparities especially as it relates.

Any efforts designed to be impactful must first be driven by high quality data. For many years, we encountered the challenge of missing or incomplete race and ethnicity data, particularly on our Birth Certificates (a significant data source for CMDC). Many of our patients of color were initially hesitant to disclose their race and ethnicity information. While the reasons for this reluctance are understandable, we recognized the importance of encouraging the reporting of such data to effectively track potential health disparities. To address this, early in 2024 our clerks were provided with scripting adapted from CMDC's data collection guidelines, and we made a concerted effort to enhance our data collection processes. As a result, our completion rates have significantly improved from approximately 70% in early 2024 to an impressive 92% by the end of 2024.

All our top disparity data are related to readmissions. Readmissions within 30 days of hospital discharge are reviewed each month including stratification by race and ethnicity. Indication for readmission is reviewed in addition to whether appropriate discharge education and care coordination was received during index admission. Patient education materials regarding when to contact the physician or hospital after discharge have been developed in multiple languages to ensure patient education in an understandable format. An emphasis on hypertensive disorders in pregnancy, which accounts for a significant proportion of readmissions, particularly for our patients of color, has been the focus of improved educational materials and nursing/physician education projects such as grand rounds on the topic of hypertension disorders and readmissions. Following the grand grounds presentation, our Chief Medical Officer began creating an order set intended to treat women with hypertensive disorders in the immediate post-partum period in the hopes of preventing readmissions for hypertensive medication management admissions (which

account for approximately half of our readmissions). This order set will be presented at our peer supervisory committees and is intended to be adopted by the end of 2025. Complications like hemorrhage, hypertension, coagulopathy, and other maternal morbidities are significant risk factors for readmission. Review of readmissions by payor and age has been added to the review process to seek opportunities to improve disparities identified in the data listed above. The report shows increased readmissions for Medicare and Medicaid payor status as compared to "Private" insurance. This is an opportunity to identify and remediate any disparities identified in patient care and treatment. Comparison of readmissions for older patients as compared to patients age 18-34 (reference group) provides evidence of increased readmissions among patient age 65+ (Rate ratio 2.1) as well as patients age 50-64 (Rate ratio 1.4). Additional review of older patients will be conducted to identify opportunities for improvement.

## **Performance in the priority area**

General acute care hospitals are required to provide hospital equity plans that address the top 10 disparities by identifying population impact and providing measurable objectives and specific timeframes. For each disparity, hospital equity plans will address performance across priority areas: person-centered care, patient safety, addressing patient social drivers of health, effective treatment, care coordination, and access to care.

### **Person-centered care**

Sharp Mary Birch demonstrates a commitment to person-centered care through initiatives focused on patient safety, communication, and a commitment to prioritizing the active participation of patients and their families throughout the health care process, fostering a spirit of partnership, compassion, transparency, inclusion and quality. It is important for our patients to receive care from

providers who are as unbiased as possible. All employees are required to complete the five training modules "Dignity in Healthcare: Combatting Implicit Bias at Sharp HealthCare." Objectives of the training include concepts of intersectionality, impact of implicit bias on the quality of care, power

dynamics, and the effects of oppression on minority communities. In addition, the modules address

implicit bias towards different races, cultures, and the LGBTQ+ community as well as corrective measures to decrease the effects. Suggestions to employ individual and organizational changes to address unconscious bias are included. Perinatal health inequities and maternal and infant health outcomes are specifically addressed and included in the training. We screen all patients for language preferences and use qualified interpreters with many languages available. We have policies outlining interpreter use expectations and consistently meet and exceed those expectations.

We stratify patient experience data by race, ethnicity, and language and exhibit high satisfaction scores in areas like "nurses treat with courtesy and respect", and "staff worked well together to care for you." We have excellent partnerships with community members who serve as dedicated members of our patient experience committee co-designing action plans. We ensure discharge instructions and education are printed in preferred languages, we continue to assess community needs, incorporate community member and patient experience feedback into equity planning, and offer financial assistance to the underrepresented populations.

### **Patient safety**

Sharp Mary Birch is committed to high reliability and achieving zero harm and zero defects to

employees, physicians, patients, and their families. We strive to provide equitable health care and regularly review data to monitor our services are indeed equitable and accessible to all. In early 2025, we added a bias/discrimination field in our patient safety event reporting system that allows our staff to report any incidents where they might have concerns that inequity may have been a causative variable in the event being reported. These events are carefully reviewed for opportunities for improvement.

Core elements of our patient safety plan include:

- Achieving zero harm through active monitoring and tracking of serious, precursor, and near miss events and creating robust action plans to prevent de ja vu events, serious safety events, and sustain improvement in overall patient safety practices.
- Promoting a speak up culture recognizing individuals through our Great Catch program to encourage proactive reporting of near miss events further partnering with patients or their families to self-activate "Code Help" resources to obtain rapid response team members for an acute change in patient condition.
- Safe technology utilization ensures safe practices for medication administration as seen in achieving an annual target goal greater than 95% for barcoding medication administration.
- Continued efforts to reduce hospital acquired infections (HAI's) remain a high priority for Sharp Mary Birch ensuring patient safety with performance better than expected infections for all HAI's. Unit level nursing daily engagement boards create patient facing visibility into key quality initiatives and highlight data related to fall reduction strategies, surgical site infection reduction strategies such as daily bathing, line maintenance, and educating and encouraging patients/families to speak up for safety through "It's ok to ask" campaign asking staff to wash hands at any time during their hospitalization for additional layer of accountability.
- Our SSI committee created new bundle elements in line with the latest research on antibiotic stewardship due to a higher-than-expected rate for C-section SSI's in 2024. Data revealed three times more than expected standardized infection ratio (SIR) but after many interventions current data reveals a SIR well below the national benchmark with only one observed infection in the last six months.
- Developing standard work for the "Timely Treatment of Hypertension" is a proactive patient safety measure aimed at ensuring patients with severe hypertension receive anti-hypertensive medications within one hour. The goal is to achieve an 80% compliance rate, with current averages between 70-85%. This measure is discussed at monthly interdisciplinary quality meetings alongside other core measures. Unit accountability is being increased by requiring each unit to review fallouts and action plans in response to system opportunities.

#### Addressing patient social drivers of health

Sharp Mary Birch encourages optimal screening practices for social determinants of health (SDOH) for all inpatient admissions leveraging their EMR system to screen all patients. This data flows into a health equity dashboard stratified by race, ethnicity, language, age, payor, etc. Screening in 2024, initially yielded low compliance due to duplicative charting practices and misalignment with data reports. Process improvement efforts highlighted important factors to enhance screening compliance. Key drivers included improving the EMR system and reducing the number of screening questions. These efforts aim to achieve a compliance rate of over 85% for patient screenings upon admission. These teams are actively involved in addressing the needs identified during the

screening process, ensuring that patients receive comprehensive care and support. For unfunded patients, efforts are made to sign them up with Medi-Cal, with referrals always offered and documented. Community Partnerships with local organizations such as Meals on Wheels, San Diego Food Banks, Diaper Bank Program, and Emergency Food Assistance Programs are established to support patients' needs.

- Targeted education initiatives have been implemented at Sharp Mary Birch to enhance SDOH assessment and intervention practices among social workers, case managers, and nursing leadership. In collaboration with 211 and CIE (Community Information Exchange), geographically and specialty-aligned community partners have been identified to support referral pathways. Recent collaboration with CIE and community providers has led to the development of new referral pathways, including an Enhanced Case Management (ECM) provider specializing in prenatal and perinatal care addressing a key need for patients at Sharp Mary Birch and another ECM provider based in the Mission Valley area. CIE utilization across the campus has increased significantly, with top referring staff accounting for 61% of all system-wide referrals, reflecting strong engagement and continued opportunity for growth.
- Educational outreach has included presentations at leadership forums and virtual nursing sessions, emphasizing best practices for SDOH screening and the roles of social work and case management in responding to positive screens. In addition, several targeted educational sessions have been delivered to social workers and case managers, focusing on the effective use of CIE, 211, and other community partners that support SDOH-related needs following hospital discharge. These sessions have strengthened staff capacity to navigate referral systems and connect patients to appropriate post-discharge resources. To further institutionalize this knowledge, development is underway for a Workday Learning module designed to support nursing staff in SDOH assessment and intervention, ensuring consistent and scalable education across disciplines. These coordinated efforts reflect a strategic commitment to advancing health equity, improving care transitions, and leveraging community partnerships to address social determinants of health.

## **Performance in the priority area continued**

Performance across all of the following priority areas.

### **Effective treatment**

One of our most valued strategies to continually improve our quality of care is engagement with quality collaboratives. Sharp Mary Birch volunteered to be a pilot site for California Maternal Quality Care Collaborative (CMQCC) in 2010 as they developed their California Maternal Data Center- now used by over 240 hospitals nationwide. This partnership has significantly improved patient outcomes and highlighted areas for further enhancement. CMQCCs mission is to end preventable morbidity, mortality and racial disparities in maternity care. The hospital has received CMQCC's Superstar Award for 2024 and 2025, recognizing its exceptional engagement and outcomes when compared with other large volume hospitals nationally. Sharp Mary Birch regularly utilizes the quality measures race and ethnicity stratification tools built into CMDC, reporting data trends monthly at quality meetings. We have implemented key toolkits for Hemorrhage, NTSV, Hypertensive Disorders of Pregnancy, and have begun developing policies and order sets based on their most recently released topic: Sepsis. Each of these conditions are risk factors for readmission. SMB is also a member of The Council of Women's and Infants' Specialty Hospitals (CWISH).

CWISH is a membership organization of non-profit hospitals that are leaders in providing services to women and infants. CWISH began in 1991 as a group of non-competing hospitals interested in sharing greater financial and operational data. The goal of this information sharing was to assist each organization in better servicing its patients and to benefit from the collective strengths of the entire group. The National Perinatal Information Center (NPIC) provides coordinating and data gathering services for the CWISH hospitals. CWISH currently has fourteen member hospitals representing close to 126,000 deliveries annually. These partnerships have been integral for staying on the cutting edge of women's health care

#### Care coordination

Sharp Mary Birch Hospital shows commitment to effective care coordination by:

- Facilitating smooth transitions between hospitals, primary care, and specialty care services which is crucial for an integrative healthcare system.
- By utilizing resources available at both the entity level and across the organization, Sharp Mary Birch coordinates care across the continuum.
- Sharp invested immense resources to implement a new EMR system in March 2024. This costly transition was initiated to improve coordination of outpatient and inpatient care. This has made information more readily available between doctors' offices and the inpatient setting. We also implemented a Sharp App so that patients can easily schedule appointments, message their doctor, and review lab results. These messages are also viewable to the inpatient healthcare team. Transition to a new EMR system has streamlined communication and care coordination among providers. This transition reduces errors due to miscommunication and closes gaps in timely and effective care. Consequently, the new system enhances the overall quality of patient care by ensuring that all providers have access to the same information, leading to more informed decision-making and improved patient outcomes.
- Sharp Mary Birch is a resource not just for our patients, but for the broader community as well. We support families with lactation assistance with regular community support groups staffed by Lactation Consultants, offer lactation help and infant weighing at our New Beginnings Boutique, and arrange outpatient Lactation visits for families after discharge. We initiate lactation consults right after delivery in our labor and delivery and PACU units for those patients at particular risk for lactation failure. We offer a newborn care class in the hospital which goes over all of the basics of infant care- bathing, feeding, and when to seek help. Discharge instructions and New Beginnings care guides are available in multiple languages and needs assessed prior to every discharge.
- For unfunded patients, efforts are made to sign them up with Medi-Cal, with referrals always offered and documented. Community Partnerships with local organizations such as Meals on Wheels, San Diego Food Banks, Diaper Bank Program, and Emergency Food Assistance Programs are established to support patients' needs.

#### Access to care

Access to care

Sharp Mary Birch Hospital is dedicated to improving access to care by addressing various barriers. Tackling cost barriers by offering financial assistance and collaborating with charity groups and community philanthropic efforts. The hospital ensures equitable care by consistently using interpreter services to help patients understand information. In 2021 Sharp adopted a policy called LGBTQ, Transgender, & Gender-Nonconforming Patient Care developed by members of the LGBTQ community. This policy describes transgender, gender-nonconforming and LGBTQ inclusive practices adopted by Sharp Healthcare with the goal of optimizing the overall health and well-being of our patients. The policy was reaffirmed May of 2025. Sharp Mary Birch has a patient experience

committee focused on delivering equitable care to all with several key initiatives outline for 2025. The committee has community representative and even previous NICU parents giving first-hand experience and feedback. Sharp Mary Birch case management and social work team partnered with our health system virtual nursing program focus on timely appointment scheduling with primary care clinics to reduce wait times. Sharp Mary Birch continues to partner with Mother's Milk Bank to host annual milk drives for donor breastmilk in San Diego community and 3535 ounces were collected in CY2024. Sharp Mary Birch hospital remains committed to the community we serve and will strive to remain innovative in access to all equitable care endeavors.

**Methodology Guidelines**

Did the hospital follow the methodology in the Measures Submission Guide? (Y/N)
