

Hospital Equity Measures Report

General Information

Report Type:	Hospital Equity Measures Report
Year:	2024
Hospital Name:	SHARP MEMORIAL HOSPITAL
Facility Type:	General Acute Care Hospital
Hospital HCAI ID:	106370694
Report Period:	01/01/2024 - 12/31/2024
Status:	Complete
Due Date:	11/29/2025
Last Updated:	03/10/2026
Hospital Location with Clean Water and Air:	N
Hospital Web Address for Equity Report:	https://www.sharp.com/about/quality

Overview

Assembly Bill No. 1204 requires the Department of Health Care Access and Information (HCAI) to develop and administer a Hospital Equity Measures Reporting Program to collect and post summaries of key hospital performance and patient outcome data regarding sociodemographic information, including but not limited to age, sex, race/ethnicity, payor type, language, disability status, and sexual orientation and gender identity.

Hospitals (general acute, children's, and acute psychiatric) and hospital systems are required to annually submit their reports to HCAI. These reports contain summaries of each measure, the top 10 disparities, and the equity plans to address the identified disparities. HCAI is required to maintain a link on the HCAI website that provides access to the content of hospital equity measures reports and equity plans to the public. All submitted hospitals are required to post their reports on their websites, as well.

Laws and Regulations

For more information on Assembly Bill No. 1204, please visit the following link by copying and pasting the URL into your web browser:

https://leginfo.legislature.ca.gov/faces/billTextClient.xhtml?bill_id=202120220AB1204

Hospital Equity Measures

Joint Commission Accreditation

General acute care hospitals are required to report three structural measures based on the Commission Accreditation's Health Care Disparities Reduction and Patient-Centered Communication Accreditation Standards. For more information on these measures, please visit the following link by copying and pasting the URL into your web browser:

<https://www.jointcommission.org/standards/r3-report/r3-report-issue-36-new-requirements-to-reduce>

-health-care-disparities/

The first two structural measures are scored as "yes" or "no"; the third structural measure comprises the percentages of patients by five categories of preferred languages spoken, in addition to one other/unknown language category.

Designate an individual to lead hospital health equity activities (Y = Yes, N = No).

Y

Provide documentation of policy prohibiting discrimination (Y = Yes, N = No).

Y

Number of patients that were asked their preferred language, five defined categories and one other/unknown languages category.

137278

Table 1. Summary of preferred languages reported by patients.

Languages	Number of patients who report preferring language	Total number of patients	Percentage of total patients who report preferring language (%)
English Language	133883	137278	97.5
Spanish Language	2095	137278	1.5
Asian Pacific Islander Languages	712	137278	0.5
Middle Eastern Languages	307	137278	0.2
American Sign Language	14	137278	0.0
Other Languages	200	137278	0.1

Centers for Medicare & Medicaid Services (CMS) Hospital Commitment to Health Equity Structural (HCHE) Measure

There are five domains that make up the CMS Hospital Commitment to HCHE measures. Each domain is scored as "yes" or "no." In order to score "yes," a general acute care hospital is required to confirm all the domain's attestations. Lack of one or more of the attestations results in a score of "no." For more information on the CMS Hospital Commitment to HCHE measures, please visit the following link by copying and pasting the URL into your web browser:

<https://data.cms.gov/provider-data/topics/hospitals/health-equity>

Centers for Medicare & Medicaid Services (CMS) Hospital Commitment to Health Equity Structural (HCHE) Measure Domain 1: Strategic Planning (Yes/No)

- Our hospital strategic plan identifies priority populations who currently experience health disparities.
- Our hospital strategic plan identifies healthcare equity goals and discrete action steps to achieve these goals.
- Our hospital strategic plan outlines specific resources that have been dedicated to achieving our equity goals.
- Our hospital strategic plan describes our approach for engaging key stakeholders, such as community-based organizations.

Y

CMS HCHE Measure Domain 2: Data Collection (Yes/No)

- Our hospital strategic plan identifies healthcare equity goals and discrete action steps to achieve these goals.

- Our hospital has training for staff in culturally sensitive collection of demographics and/or social determinant of health information.
- Our hospital inputs demographic and/or social determinant of health information collected from patients into structured, interoperable data elements using a certified electronic health record (EHR) technology.

Y

CMS HCHE Measure Domain 3: Data Analysis (Yes/No)

- Our hospital stratifies key performance indicators by demographic and/or social determinants of health variables to identify equity gaps and includes this information in hospital performance dashboards.

Y

CMS HCHE Measure Domain 4: Quality Improvement (Yes/No)

- Our hospital participates in local, regional or national quality improvement activities focused on reducing health disparities.

Y

CMS HCHE Measure Domain 5: Leadership Engagement (Yes/No)

- Our hospital senior leadership, including chief executives and the entire hospital board of trustees, annually reviews our strategic plan for achieving health equity.
- Our hospital senior leadership, including chief executives and the entire hospital board of trustees, annually review key performance indicators stratified by demographic and/or social factors.

Y

Centers for Medicare & Medicaid Services (CMS) Social Drivers of Health (SDOH)

General acute care hospitals are required to report on rates of screenings and intervention rates among patients above 18 years old for five health related social needs (HRSN), which are food insecurity, housing instability, transportation problems, utility difficulties, and interpersonal safety. These rates are reported separately as being screened as positive for any of the five HRSNs, positive for each individual HRSN, and the intervention rate for each positively screened HRSN. For more information on the CMS SDOH, please visit the following link by copying and pasting the URL into your web browser:

<https://www.cms.gov/priorities/innovation/key-concepts/social-drivers-health-and-health-related-social-needs>

Number of patients admitted to an inpatient hospital stay who are 18 years or older on the date of admission and are screened for all of the five HRSN

16295

Total number of patients who are admitted to a hospital inpatient stay and who are 18 years or older on the date of admission

25495

Rate of patients admitted for an inpatient hospital stay who are 18 years or older on the date of admission, were screened for an HRSN, and who screened positive for one or more of the HRSNs

63.9

Table 2. Positive screening rates and intervention rates for the five Health Related Social Needs of the Centers of Medicare & Medicaid Services (CMS) Social Drivers of Health (SDOH).

Social Driver of Health	Number of positive screenings	Rate of positive screenings (%)	Number of positive screenings who received intervention	Rate of positive screenings who received intervention (%)
Food Insecurity	2565	15.7	2119	13.0
Housing Instability	2778	17.0	2309	14.2
Transportation Problems	2675	16.4	2219	13.6
Utility Difficulties	2505	15.4	2064	12.7
Interpersonal Safety	2529	15.5	2100	12.9

Core Quality Measures for General Acute Care Hospitals

There are two quality measures from the Hospital Consumer Assessment of Healthcare Providers and Systems (HCAHPS) survey. For more information on the HCAHPS survey, please visit the following link by copying and pasting the URL into your web browser:

<https://hcahpsonline.org/en/survey-instruments/>

Patient Recommends Hospital

The first HCAHPS quality measure is the percentage of patients who would recommend the hospital to friends and family. For this measure, general acute care hospitals provide the percentage of patient respondents who responded "probably yes" or "definitely yes" to whether they would recommend the hospital, the percentage of the people who responded to the survey (i.e., the response rate), and the inputs for the percentages. The percentages and inputs are stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding HCAHPS question number is 19.

Number of respondents who replied "probably yes" or "definitely yes" to HCAHPS Question 19, "Would you recommend this hospital to your friends and family?"

3772

Total number of respondents to HCAHPS Question 19

3929

Percentage of total respondents who responded "probably yes" or "definitely yes" to HCAHPS Question 19

96.0

Total number of people surveyed on HCAHPS Question 19

21828

Response rate, or the percentage of people who responded to HCAHPS Question 19

18.0

Table 3. Patient recommends hospital by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

Race and/or Ethnicity	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
American Indian or Alaska Native					
Asian					
Black or African American					
Hispanic or Latino					
Middle Eastern or North African					
Multiracial and/or Multiethnic (two or more races)					
Native Hawaiian or Pacific Islander					
White					

Age	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Age < 18					
Age 18 to 34					
Age 35 to 49					
Age 50 to 64					
Age 65 Years and Older					

Sex assigned at birth	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Female					
Male					
Unknown					

Payer Type	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Medicare					
Medicaid					
Private					
Self-Pay					
Other					

Preferred Language	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
English Language

Female-to-male (FTM)/ transgender male/trans man					
Male					
Male-to-female (MTF)/ transgender female/trans woman					
Non-conforming gender					
Additional gender category or other					
Not disclosed					

Patient Received Information in Writing

The second HCAHPS quality measure is the percentage of patients who reported receiving information in writing on symptoms and health problems to look out for after leaving the hospital. General acute care hospitals are required to provide the percentage of patient respondents who responded "yes" to being provided written information, the percentage of the people who responded to the survey (i.e., the response rate), and the inputs for these percentages. These percentages and inputs are stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding HCAHPS question number is 17.

Number of respondents who replied "yes" to HCAHPS Question 17, "During this hospital stay, did you get information in writing about what symptoms or health problems to look out for after you left the

hospital?"

3458

Total number of respondents to HCAHPS Question 17

3929

Percentage of respondents who responded "yes" to HCAHPS Question 17

88.0

Total number of people surveyed on HCAHPS Question 17

21828

Response rate, or the percentage of people who responded to HCAHPS Question 17

18.0

Table 4. Patient reports receiving information in writing about symptoms or health problems by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

Race and/or Ethnicity	Number of "yes" responses	Total number of responses	Percentage of "yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)

Agency for Healthcare Research and Quality (AHRQ) Indicators

General acute care hospitals are required to report on two indicators from the Agency for Healthcare Research and Quality (AHRQ). For general information about AHRQ indicators, please visit the following link by copying and pasting the URL into your web browser:

<https://qualityindicators.ahrq.gov/>

Pneumonia Mortality Rate

The Pneumonia Mortality Rate is defined as the rate of in-hospital deaths per 1,000 hospital discharges with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission for patients ages 18 years and older. General acute care hospitals report the Pneumonia Mortality Rate by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding AHRQ Inpatient Quality Indicator is 20. For more information about this indicator, please visit the following link by copying and pasting the URL into your web browser:

https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_20_Pneumonia_Mortality_Rate.pdf

Number of in-hospital deaths with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission

20

Total number of hospital discharges with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission

790

Rate of in-hospital deaths per 1,000 hospital discharges with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission

25.3

Table 5. Pneumonia Mortality Rate by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

Race and/or Ethnicity	Number of in-hospital deaths that meet the inclusion/exclusion criteria	Number of hospital discharges that meet the inclusion/exclusion criteria	Rate of in-hospital deaths per 1,000 hospital discharges that meet the inclusion/exclusion criteria (%)

Death Rate among Surgical Inpatients with Serious Treatable Complications

The Death Rate among Surgical Inpatients with Serious Treatable Complications is defined as the rate of in-hospital deaths per 1,000 surgical discharges among patients ages 18-89 years old or obstetric patients with serious treatable complications. General acute care hospitals report this measure by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding AHRQ Patient Safety Indicator is 04. For more information about this indicator, please visit the following link by copying and pasting the URL into your web browser:
https://qualityindicators.ahrq.gov/Downloads/Modules/PSI/V2023/TechSpecs/PSI_04_Death_Rate_among_Surgical_Inpatients_with_Serious_Treatable_Complications.pdf

California Maternal Quality Care Collaborative (CMQCC) Core Quality Measures

There are three core quality maternal measures adopted from the California Maternal Quality Care Collaborative (CMQCC).

CMQCC Nulliparous, Term, Singleton, Vertex (NTSV) Cesarean Birth Rate

The CMQCC Nulliparous, Term, Singleton, Vertex (NTSV) Cesarean Birth Rate is defined as nulliparous women with a term (at least 37 weeks gestation), singleton baby in a vertex position delivered by cesarian birth. General acute care hospitals report the NTSV Cesarean Birth Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. For more information, please visit the following link by copying and pasting the URL into your web browser:

CMQCC Vaginal Birth After Cesarean (VBAC) Rate

The CMQCC Vaginal Birth After Cesarean (VBAC) Rate is defined as vaginal births per 1,000 deliveries by patients with previous Cesarean deliveries. General acute care hospitals report the VBAC Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The VBAC Rate uses the specifications of AHRQ Inpatient Quality Indicator 22. For more information, please visit the following link by copying and pasting the URL into your web browser:

[https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_22_Vaginal_Birth_After_Cesarean_\(VBAC\)_Delivery_Rate_Uncomplicated.pdf](https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_22_Vaginal_Birth_After_Cesarean_(VBAC)_Delivery_Rate_Uncomplicated.pdf)

CMQCC Exclusive Breast Milk Feeding Rate

The CMQCC Exclusive Breast Milk Feeding Rate is defined as the newborns per 100 who reached at least 37 weeks of gestation (or 3000g if gestational age is missing) who received breast milk

exclusively during their stay at the hospital. Other criteria are that the newborns did not go to the neonatal intensive care unit (NICU), transfer, or die, did not reflect multiple gestation, and did not have codes for parenteral nutrition or galactosemia. General acute care hospitals report the Exclusive Breast Milk Feeding Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The CMQCC Exclusive Breast Milk Feeding Rate uses the Joint Commission National Quality Measure PC-05. For more information, please visit the following link by copying and pasting the URL into your web browser:
<https://manual.jointcommission.org/releases/TJC2024B/MIF0170.html>

Number of newborn cases that were exclusively fed breast milk during their hospital stay and meet the inclusion and exclusion criteria

NA

Total number of newborn cases born in the hospital that meet the inclusion and exclusion criteria

NA

Rate of newborn cases per 100 that were exclusively fed breast milk during their hospital stay and meet the inclusion and exclusion criteria

HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate

General acute care hospitals are required to report several HCAI All-Cause Unplanned 30-Day Hospital Readmission Rates, which are broadly defined as the percentage of hospital-level, unplanned, all-cause readmissions after admission for eligible conditions within 30 days of hospital discharge for patients aged 18 years and older. These rates are first stratified based on any eligible condition, mental health disorders, substance use disorders, co-occurring disorders, and no behavioral health diagnosis. Then, each condition-stratified hospital readmission rate is further stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. For more information on the HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate, please visit the following link by copying and pasting the URL into your web browser:

https://hcai.ca.gov/wp-content/uploads/2024/10/HCAI-All-Cause-Readmission-Rate-Exclusions_ADA.pdf

HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate – Any Eligible Condition

Number of inpatient hospital admissions which occurs within 30 days of the discharge date of an eligible index admission and were 18 years or older at time of admission

2384

Total number of patients who were admitted to the general acute care hospital and were 18 years or older at time of admission

16490

Rate of hospital-level, unplanned, all-cause readmissions after admission for any eligible condition

within 30 days of hospital discharge for patients aged 18 and older

14.5

Table 10. HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate for any eligible condition by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

Health Equity Plan

All general acute care hospitals report a health equity plan that identifies the top 10 disparities and a written plan to address them.

Top 10 Disparities

Disparities for each hospital equity measure are identified by comparing the rate ratios by stratification groups. Rate ratios are calculated differently for measures with preferred low rates and those with preferred high rates. Rate ratios are calculated after applying the California Health and Human Services Agency's "Data De-Identification Guidelines (DDG)," dated September 23, 2016.

Table 15. Top 10 disparities and their rate ratio values.

Measures	Stratifications	Stratification Group	Stratification Rate	Reference Group	Reference Rate	Rate Ratio
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Race and/or Ethnicity	Multiracial and/or Multiethnic (two or more races)	21.0	White	13.7	1.5
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Expected Payor	Medicaid	16.8	Private	11.2	1.5
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Expected Payor	Medicare	15.5	Private	11.2	1.4
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Age (excluding maternal measures)	65 and older	15.4	35 to 49	11.8	1.3
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Race and/or Ethnicity	Black or African American	17.5	White	13.7	1.3
AHRQ Patient Safety Indicator Death Rate among Surgical Inpatients with Serious Treatable Complications	Age (excluding maternal measures)	50 to 64	224.5	65 and older	177.8	1.3
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Age (excluding maternal measures)	50 to 64	14.0	35 to 49	11.8	1.2
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Age (excluding maternal measures)	18 to 34	13.3	35 to 49	11.8	1.1
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Race and/or Ethnicity	Hispanic or Latino	15.2	White	13.7	1.1
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Race and/or Ethnicity	Asian	14.4	White	13.7	1.1

Plan to address disparities identified in the data

Sharp Memorial Hospital is actively working to advance health equity through strategic initiatives. The hospital collaborates with Sharp Healthcare on both entity-specific and system-wide efforts. These initiatives focus on identifying priority populations experiencing health disparities, setting health equity goals, developing action plans to achieve these goals, and engaging key stakeholders across the organization. This comprehensive approach aims to address and reduce health disparities especially as it relates all cause 30-day readmissions and patient safety indicators. Sharp Memorial's top ten disparities identified nine opportunities to address readmissions by race, ethnicity, age, and payor and one opportunity to address death rates among surgical complications for elective procedures by age. All rate ratios identified are quite low with all under a value of 2, with the highest rate ratio at 1.5. With the lower the rate preferred, Memorial's readmission disparities have some opportunities for improvement but overall are doing well. The top disparities identified reveal multi-racial or multi-ethnic patients are readmitted one and a half times more than their white counterparts. Medicaid and Medicare higher than private payors and age seems to be a factor but variable. Sharp Memorial has a comprehensive approach to addressing readmissions through an interdisciplinary readmission taskforce committee represented by all hospital disciplines and services. Even though the data reveals a rate ratio of 1.5 for multi-racial and multi-ethnic readmissions compared to white patients, this data matches our inpatient volumes of each group. That said, with increased screening for social determinants of health to a compliance of greater than 85% in recent months, leaders can now create a more comprehensive plan down to the individual unit level, addressing this disparity with enhanced data visibility. An example of this includes how one of our surgical units identified a gap in post operative education related to a language barrier and cultural beliefs. The team quickly created additional education materials,

ensuring proper utilization of the materials leading to a reduction in readmissions over the past several months. Sharp Healthcare establishes annual target goals to lower both 30-day and 7-day readmissions, utilizing an entity specific taskforce that concentrates on high-risk patient populations and disease-specific strategies. Since the taskforce's inception, our 7-day readmissions have decreased from 4.34% in September 2024 to 3.41 % at the end of June 2025. Sharp Memorial is planning to implement several strategies to improve patient care post-discharge. These strategies include increasing the use of discharge phone calls to assess patient needs, expanding discharge prescription services to all high-risk patient populations, and enhancing referrals to outpatient providers or clinics with secured follow-up appointments. These initiatives aim to prevent complications and ensure continuity of care for patients after they leave the hospital.

Performance in the priority area

General acute care hospitals are required to provide hospital equity plans that address the top 10 disparities by identifying population impact and providing measurable objectives and specific timeframes. For each disparity, hospital equity plans will address performance across priority areas: person-centered care, patient safety, addressing patient social drivers of health, effective treatment, care coordination, and access to care.

Person-centered care

Sharp Memorial Hospital demonstrates a commitment to person-centered care through initiatives focused on patient safety, communication, and a commitment to prioritizing the active participation of patients and their families throughout the health care process, fostering a spirit of partnership, compassion, transparency, inclusion and quality. This commitment continues to be exemplified year after year as Sharp Memorial continues to be recognized with Planetree International's Gold certification. This award highlights our dedication to care that is person-centered, inclusive and tailored to meet the specific needs of those we serve which are the core elements of The Sharp Experience. We screen all patients for language preferences and use qualified interpreters with many languages available. We have policies outlining interpreter use expectations and consistently meet and exceed those expectations. We stratify patient experience data by race, ethnicity, and language and exhibit high satisfaction scores in areas like "nurses treat with courtesy and respect," and "staff worked well together to care for you." We have excellent partnerships with community members who serve as dedicated members of our patient experience committee codesigning action plans. We ensure discharge instructions and education are printed in preferred languages, we continue to assess community needs, incorporate community member and patient experience feedback into equity planning, and offer financial assistance to the underrepresented populations.

Patient safety

Sharp Memorial Hospital is committed to high reliability and achieving zero harm and zero defects to employees, physicians, patients, and their families. We strive to provide equitable health care and regularly review data to monitor our services are indeed equitable and accessible to all. In early 2025, we added a bias/discrimination field in our patient safety event reporting system that allows our staff to report any incidents where they might have concerns that inequity may have been a causative variable in the event being reported. These events are carefully reviewed for opportunities

for improvement. Core elements of our patient safety plan include:

- Achieving zero harm through active monitoring and tracking of serious, precursor, and near miss events and creating robust action plans to prevent de ja vu events, serious safety events, and sustain improvement in overall patient safety practices.
- Promoting a speak up culture recognizing individuals through our Great Catch program to encourage proactive reporting of near miss events further partnering with patients or their families to self-activate "Code Help" resources to obtain rapid response team members for an acute change in patient condition.
- Safe technology utilization ensures safe practices for medication administration as seen in achieving an annual target goal greater than 95% for barcoding medication administration and greater than 85% for computerized physician order entry.
- Continued efforts to reduce hospital acquired infections (HAI's) remain a high priority for Sharp Memorial ensuring patient safety with performance better than expected infections for all HAI's. Unit level nursing daily engagement boards create patient facing visibility into key quality initiatives and highlight data related to fall reduction strategies, surgical site infection reduction strategies such as daily bathing, line maintenance, and educating and encouraging patients/families to speak up for safety through "It's ok to ask" campaign asking staff to wash hands at any time during their hospitalization for additional layer of accountability

Addressing patient social drivers of health

Sharp Memorial Hospital strategic initiative to advance SDOH assessment and intervention Across Metro Campus include:

- Optimal screening practices for social determinants of health (SDOH) for all inpatient admissions leveraging the EMR system. This data flows into a health equity dashboard stratified by race, ethnicity, language, age, payor, etc. Screening rates have steadily increased with a current rate of 65% as of March 2025 of patients screened for all five SDOH factors. Data further reveals that 15% of those patients report having needs in all the five SDOH factors. Sharp Memorial has a high intervention rate of 82% for patients with these needs by nursing, case management and social work ensuring that patients receive comprehensive care and support. For unfunded patients, efforts are made to sign them up with Medi-Cal, with referrals always offered and documented.

Community

Partnerships with local organizations such as Meals on Wheels, San Diego Food Bank, Diaper Bank

Program, and Emergency Food Assistance Programs are established to support patients' needs.

- Targeted education initiatives have been implemented at Sharp Memorial to enhance SDOH assessment and intervention practices among social workers, case managers, and nursing leadership. In collaboration with 211 and CIE (Community Information Exchange), geographically and specialty-aligned community partners have been identified to support referral pathways. Currently, 25% of all CIE referrals originate from the Memorial campus. CIE utilization across the campus has increased significantly, with top referring staff accounting for 61% of all system-wide referrals, reflecting strong engagement and continued opportunity for growth.
- The Substance Use Navigator (SUN) at SMH continues to play a critical role in reducing stigma and discrimination toward individuals with substance use disorders. Through direct patient engagement, the SUN administers the Screening, Brief Intervention, and Referral to Treatment (SBIRT) protocol, which is instrumental in identifying and supporting patients who may not present with substance use as their primary concern. This proactive approach enables early intervention and connection to appropriate services. In addition to facilitating referrals, the SUN collaborates with

providers to encourage the prescribing of life-saving medications such as Suboxone. Harm reduction efforts are further supported through the distribution of naloxone and fentanyl testing strips in the emergency department. These efforts not only address immediate clinical needs but also contribute to broader SDOH goals by improving access, reducing barriers, and promoting equitable care for vulnerable populations.

- Educational outreach has included presentations at leadership forums and virtual nursing sessions, emphasizing best practices for SDOH screening and the roles of social work and case management in responding to positive screens. In addition, several targeted educational sessions have been delivered to social workers and case managers, focusing on the effective use of CIE, 211, and other community partners that support SDOH-related needs following hospital discharge. These sessions have strengthened staff capacity to navigate referral systems and connect patients

to appropriate post-discharge resources. To further institutionalize this knowledge, development is underway for a Workday Learning module designed to support nursing staff in SDOH assessment and intervention, ensuring consistent and scalable education across disciplines. These coordinated

efforts reflect a strategic commitment to advancing health equity, improving care transitions, and leveraging community partnerships to address social determinants of health

Performance in the priority area continued

Performance across all of the following priority areas.

Effective treatment

Sharp Memorial Hospital demonstrates solid performance in delivering effective treatment by adhering to evidence based clinical guidelines for all chronic diseases such as diabetes, heart failure, COPD, cancer, etc. This is evidenced by receiving "Get with the Guidelines Stroke Gold Plus" year after year. However, readmission data for patients greater than 65 yrs of age revealed a trend in new onset heart failure patients readmitting for confusion around medications prescribed at discharge.

Strategies and programs implemented by Sharp Memorial to improve outcomes for patients with heart failure and stroke include:

- Monitoring: The heart failure team uses EMR documentation, lab values, and vital signs to identify patients at risk of deterioration.

- Care Coordination: Heart failure nurse practitioners collaborate with social work and case management for care coordination, especially for unfunded patients ensuring access to community resources.

- Transitions of Care Program: A pharmacy-led program ensures heart failure patients receive prescriptions and medication education before discharge, reducing readmissions. This program ensures equitable care by offering interpreter services and teaching in the patient's preferred language. Early data reveals this program has reduced readmissions.

- Medication Management: Pharmacy teams use EMR and additional software to monitor medications, adjust doses, and ensure compliance with guidelines.

Sharp Memorial empowers patients to take ownership of their disease process and share accountability in the self-management of their chronic illness. By providing comprehensive care coordination, medication management, and education, patients are better equipped to understand and manage their conditions. Overall, these initiatives aim to enhance patient care and reduce

morbidity, mortality, and readmissions.

Care coordination

Sharp Memorial Hospital shows commitment to effective care coordination by:

- Facilitating smooth transitions between hospitals, primary care, and specialty care services which is crucial for an integrative healthcare system.
- By utilizing resources available at both the entity level and across the organization, Sharp Memorial coordinates care across the continuum.
- Sharp invested immense resources to implement a new EMR system in March 2024. This costly transition was initiated to improve coordination of outpatient and inpatient care. This has made information more readily available between doctors' offices and the inpatient setting. We also implemented a Sharp App so that patients can easily schedule appointments, message their doctor, and review lab results. These messages are also viewable to the inpatient healthcare team. Transition to a new EMR system has streamlined communication and care coordination among providers. This transition reduces errors due to miscommunication and closes gaps in timely and effective care. Consequently, the new system enhances the overall quality of patient care by ensuring that all providers have access to the same information, leading to more informed decision-making and improved patient outcomes.

- For unfunded patients, efforts are made to sign them up with Medi-Cal, with referrals always offered and documented. Community Partnerships with local organizations such as Meals on Wheels, San Diego Food Banks, Diaper Bank Program, and Emergency Food Assistance Programs are established to support patients' needs.

Sharp Memorial Hospital is a known leader both in California and Nationally for advancements in Generation Health. Each facet of Generational Health focuses on ensuring equitable care is delivered to every patient, every place, every time. Patients are empowered in the design of the healthcare, emphasizing what matters most so the delivery of care is tailored to meet unique needs.

The Generational Health approach at Sharp Memorial Hospital was developed to ensure older adult patients receive the highest quality of care aligned with their goals, age-specific risks, needs and life

circumstances. A variety of different pathways and programs have been developed under this approach, including:

- Healthy Aging- Program focused on maintaining strength and cognition in independent patients.
- Geriatric Surgery Program focused on perioperative issues affecting older adults. For patients 75 and older considering surgery, an early referral to the program can assist with need identification and optimization. The team works with primary care physicians, surgeons, and consultants to create cohesive, patient-centered plans.
- Geriatric Trauma Program focused on patient-centered care for injured older adults.
- Prehabilitation Program focused on strength training and whole-body optimization ahead of surgical intervention.
- Advanced Illness Management Nursing-driven team dedicated to establishing and documenting goals of care.
- Community Pathway developed to promote health post-hospitalization and to ensure post hospitalization success.
- Geriatric Emergency Department - An accredited emergency department that is designed to respond to the emergency care needs of older adults, and that serves as the entry point for decision-making and initiating geriatric-focused programs.

Through implementation of Generational Health, Sharp has achieved remarkable success in

improving patient outcomes, such as reducing delirium, maintaining physical function, completing advance care planning, reducing length of stay, and lowering costs

Access to care

Sharp Memorial Hospital is dedicated to improving access to care by addressing various barriers including tackling cost barriers by offering financial assistance and collaborating with charity groups and community philanthropic efforts. The hospital ensures equitable care by consistently using interpreter services to help patients understand information. Sharp Memorial has a newly formed Clinical Health Equity Taskforce focused on delivering equity care to all with several key initiatives outline for 2025. Sharp Memorial's case management and social work team partnered with our health system virtual nursing program focus on timely appointment scheduling with primary care clinics to reduce wait times. However, challenges persist in addressing transportation and housing needs to ensure equitable access for all patient populations. Changes in infusion clinic hours have been made to enhance follow-up care and reduce readmissions, particularly benefiting cancer patients. Our cancer teams routinely solicit feedback, and recognized patients were unable to receive treatment during traditional operating hours due to work obligations, childcare, transportation barriers. The Cook Infusion Center extended operating hours M-F and added operating hours on Saturdays and Sundays as of 01/01/2024, to accommodate the needs of our patient. This change increased access to care by 13%. Sharp Memorial hospital remains committed to the community we serve and will strive to remain innovative in access to all equitable care endeavors

Methodology Guidelines
