

Hospital Equity Measures Report

General Information

Report Type:	Hospital Equity Measures Report
Year:	2024
Hospital Name:	GREATER EL MONTE COMMUNITY HOSPITAL
Facility Type:	General Acute Care Hospital
Hospital HCAI ID:	106190352
Report Period:	1/1/2024 - 12/31/2024
Status:	Complete
Due Date:	11/29/2025
Last Updated:	01/23/2026
Hospital Location with Clean Water and Air:	N
Hospital Web Address for Equity Report:	https://www.ahmchealth.com/gemch/

Overview

Assembly Bill No. 1204 requires the Department of Health Care Access and Information (HCAI) to develop and administer a Hospital Equity Measures Reporting Program to collect and post summaries of key hospital performance and patient outcome data regarding sociodemographic information, including but not limited to age, sex, race/ethnicity, payor type, language, disability status, and sexual orientation and gender identity.

Hospitals (general acute, children's, and acute psychiatric) and hospital systems are required to annually submit their reports to HCAI. These reports contain summaries of each measure, the top 10 disparities, and the equity plans to address the identified disparities. HCAI is required to maintain a link on the HCAI website that provides access to the content of hospital equity measures reports and equity plans to the public. All submitted hospitals are required to post their reports on their websites, as well.

Laws and Regulations

For more information on Assembly Bill No. 1204, please visit the following link by copying and pasting the URL into your web browser:

https://leginfo.legislature.ca.gov/faces/billTextClient.xhtml?bill_id=202120220AB1204

Hospital Equity Measures

Joint Commission Accreditation

General acute care hospitals are required to report three structural measures based on the Commission Accreditation's Health Care Disparities Reduction and Patient-Centered Communication Accreditation Standards. For more information on these measures, please visit the following link by copying and pasting the URL into your web browser:

<https://www.jointcommission.org/standards/r3-report/r3-report-issue-36-new-requirements-to-reduce>

-health-care-disparities/

The first two structural measures are scored as "yes" or "no"; the third structural measure comprises the percentages of patients by five categories of preferred languages spoken, in addition to one other/ unknown language category.

Designate an individual to lead hospital health equity activities (Y = Yes, N = No).

Y

Provide documentation of policy prohibiting discrimination (Y = Yes, N = No).

Y

Number of patients that were asked their preferred language, five defined categories and one other/ unknown languages category.

26285

Table 1. Summary of preferred languages reported by patients.

Languages	Number of patients who report preferring language	Total number of patients	Percentage of total patients who report preferring language (%)
English Language	16585	26285	63.1
Spanish Language	8728	26285	33.2
Asian Pacific Islander Languages	931	26285	3.5
Middle Eastern Languages	suppressed	26285	suppressed
American Sign Language		26285	
Other Languages	suppressed	26285	suppressed

Centers for Medicare & Medicaid Services (CMS) Hospital Commitment to Health Equity Structural (HCHE) Measure

There are five domains that make up the CMS Hospital Commitment to HCHE measures. Each domain is scored as "yes" or "no." In order to score "yes," a general acute care hospital is required to confirm all the domain's attestations. Lack of one or more of the attestations results in a score of "no." For more information on the CMS Hospital Commitment to HCHE measures, please visit the following link by copying and pasting the URL into your web browser:

<https://data.cms.gov/provider-data/topics/hospitals/health-equity>

Centers for Medicare & Medicaid Services (CMS) Hospital Commitment to Health Equity Structural (HCHE) Measure Domain 1: Strategic Planning (Yes/No)

- Our hospital strategic plan identifies priority populations who currently experience health disparities.
- Our hospital strategic plan identifies healthcare equity goals and discrete action steps to achieve these goals.
- Our hospital strategic plan outlines specific resources that have been dedicated to achieving our equity goals.
- Our hospital strategic plan describes our approach for engaging key stakeholders, such as community-based organizations.

Y

CMS HCHE Measure Domain 2: Data Collection (Yes/No)

- Our hospital strategic plan identifies healthcare equity goals and discrete action steps to achieve these goals.

- Our hospital has training for staff in culturally sensitive collection of demographics and/or social determinant of health information.
- Our hospital inputs demographic and/or social determinant of health information collected from patients into structured, interoperable data elements using a certified electronic health record (EHR) technology.

Y

CMS HCHE Measure Domain 3: Data Analysis (Yes/No)

- Our hospital stratifies key performance indicators by demographic and/or social determinants of health variables to identify equity gaps and includes this information in hospital performance dashboards.

Y

CMS HCHE Measure Domain 4: Quality Improvement (Yes/No)

- Our hospital participates in local, regional or national quality improvement activities focused on reducing health disparities.

Y

CMS HCHE Measure Domain 5: Leadership Engagement (Yes/No)

- Our hospital senior leadership, including chief executives and the entire hospital board of trustees, annually reviews our strategic plan for achieving health equity.
- Our hospital senior leadership, including chief executives and the entire hospital board of trustees, annually review key performance indicators stratified by demographic and/or social factors.

Y

Centers for Medicare & Medicaid Services (CMS) Social Drivers of Health (SDOH)

General acute care hospitals are required to report on rates of screenings and intervention rates among patients above 18 years old for five health related social needs (HRSN), which are food insecurity, housing instability, transportation problems, utility difficulties, and interpersonal safety. These rates are reported separately as being screened as positive for any of the five HRSNs, positive for each individual HRSN, and the intervention rate for each positively screened HRSN. For more information on the CMS SDOH, please visit the following link by copying and pasting the URL into your web browser:

<https://www.cms.gov/priorities/innovation/key-concepts/social-drivers-health-and-health-related-social-needs>

Number of patients admitted to an inpatient hospital stay who are 18 years or older on the date of admission and are screened for all of the five HRSN

777

Total number of patients who are admitted to a hospital inpatient stay and who are 18 years or older on the date of admission

2020

Rate of patients admitted for an inpatient hospital stay who are 18 years or older on the date of admission, were screened for an HRSN, and who screened positive for one or more of the HRSNs

38.5

Table 2. Positive screening rates and intervention rates for the five Health Related Social Needs of the Centers of Medicare & Medicaid Services (CMS) Social Drivers of Health (SDOH).

Social Driver of Health	Number of positive screenings	Rate of positive screenings (%)	Number of positive screenings who received intervention	Rate of positive screenings who received intervention (%)
Food Insecurity	312	40.2	0	
Housing Instability	19	2.4	0	
Transportation Problems	39	5	0	
Utility Difficulties	suppressed	0.4	0	
Interpersonal Safety	suppressed	0.5	0	

Core Quality Measures for General Acute Care Hospitals

There are two quality measures from the Hospital Consumer Assessment of Healthcare Providers and Systems (HCAHPS) survey. For more information on the HCAHPS survey, please visit the following link by copying and pasting the URL into your web browser:

<https://hcahpsonline.org/en/survey-instruments/>

Patient Recommends Hospital

The first HCAHPS quality measure is the percentage of patients who would recommend the hospital to friends and family. For this measure, general acute care hospitals provide the percentage of patient respondents who responded "probably yes" or "definitely yes" to whether they would recommend the hospital, the percentage of the people who responded to the survey (i.e., the response rate), and the inputs for the percentages. The percentages and inputs are stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding HCAHPS question number is 19.

Number of respondents who replied "probably yes" or "definitely yes" to HCAHPS Question 19, "Would you recommend this hospital to your friends and family?"

209

Total number of respondents to HCAHPS Question 19

235

Percentage of total respondents who responded "probably yes" or "definitely yes" to HCAHPS Question 19

88.9

Total number of people surveyed on HCAHPS Question 19

1469

Response rate, or the percentage of people who responded to HCAHPS Question 19

16

Table 3. Patient recommends hospital by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

Race and/or Ethnicity	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
American Indian or Alaska Native					
Asian					
Black or African American					
Hispanic or Latino					
Middle Eastern or North African					
Multiracial and/or Multiethnic (two or more races)					
Native Hawaiian or Pacific Islander					
White					

Age	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Age < 18					
Age 18 to 34					
Age 35 to 49					
Age 50 to 64					
Age 65 Years and Older					

Sex assigned at birth	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Female					
Male					
Unknown					

Payer Type	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Medicare					
Medicaid					
Private					
Self-Pay					
Other					

Preferred Language	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
English Language					
Spanish Language

Gender Identity	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Female					
Female-to-male (FTM)/ transgender male/trans man					
Male					
Male-to-female (MTF)/ transgender female/trans woman					
Non-conforming gender					
Additional gender category or other					
Not disclosed					

Patient Received Information in Writing

The second HCAHPS quality measure is the percentage of patients who reported receiving information in writing on symptoms and health problems to look out for after leaving the hospital. General acute care hospitals are required to provide the percentage of patient respondents who responded "yes" to being provided written information, the percentage of the people who responded to the survey (i.e., the response rate), and the inputs for these percentages. These percentages and inputs are stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding HCAHPS question number is 17.

Number of respondents who replied "yes" to HCAHPS Question 17, "During this hospital stay, did you get information in writing about what symptoms or health problems to look out for after you left the

hospital?"

202

Total number of respondents to HCAHPS Question 17

235

Percentage of respondents who responded "yes" to HCAHPS Question 17

86

Total number of people surveyed on HCAHPS Question 17

1469

Response rate, or the percentage of people who responded to HCAHPS Question 17

16

Table 4. Patient reports receiving information in writing about symptoms or health problems by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

Race and/or Ethnicity	Number of "yes" responses	Total number of responses	Percentage of "yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)

Agency for Healthcare Research and Quality (AHRQ) Indicators

General acute care hospitals are required to report on two indicators from the Agency for Healthcare Research and Quality (AHRQ). For general information about AHRQ indicators, please visit the following link by copying and pasting the URL into your web browser:

<https://qualityindicators.ahrq.gov/>

Pneumonia Mortality Rate

The Pneumonia Mortality Rate is defined as the rate of in-hospital deaths per 1,000 hospital discharges with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission for patients ages 18 years and older. General acute care hospitals report the Pneumonia Mortality Rate by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding AHRQ Inpatient Quality Indicator is 20. For more information about this indicator, please visit the following link by copying and pasting the URL into your web browser:

https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_20_Pneumonia_Mortality_Rate.pdf

Number of in-hospital deaths with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission

12

Total number of hospital discharges with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission

180

Rate of in-hospital deaths per 1,000 hospital discharges with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission

66.7

Death Rate among Surgical Inpatients with Serious Treatable Complications

The Death Rate among Surgical Inpatients with Serious Treatable Complications is defined as the rate of in-hospital deaths per 1,000 surgical discharges among patients ages 18-89 years old or obstetric patients with serious treatable complications. General acute care hospitals report this measure by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding AHRQ Patient Safety Indicator is 04. For more information about this indicator, please visit the following link by copying and pasting the URL into your web browser:
https://qualityindicators.ahrq.gov/Downloads/Modules/PSI/V2023/TechSpecs/PSI_04_Death_Rate_among_Surgical_Inpatients_with_Serious_Treatable_Complications.pdf

California Maternal Quality Care Collaborative (CMQCC) Core Quality Measures

There are three core quality maternal measures adopted from the California Maternal Quality Care Collaborative (CMQCC).

CMQCC Nulliparous, Term, Singleton, Vertex (NTSV) Cesarean Birth Rate

The CMQCC Nulliparous, Term, Singleton, Vertex (NTSV) Cesarean Birth Rate is defined as nulliparous women with a term (at least 37 weeks gestation), singleton baby in a vertex position delivered by cesarian birth. General acute care hospitals report the NTSV Cesarean Birth Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. For more information, please visit the following link by copying and pasting the URL into your web browser:

CMQCC Vaginal Birth After Cesarean (VBAC) Rate

The CMQCC Vaginal Birth After Cesarean (VBAC) Rate is defined as vaginal births per 1,000 deliveries by patients with previous Cesarean deliveries. General acute care hospitals report the VBAC Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The VBAC Rate uses the specifications of AHRQ Inpatient Quality Indicator 22. For more information, please visit the following link by copying and pasting the URL into your web browser:

[https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_22_Vaginal_Birth_After_Cesarean_\(VBAC\)_Delivery_Rate_Uncomplicated.pdf](https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_22_Vaginal_Birth_After_Cesarean_(VBAC)_Delivery_Rate_Uncomplicated.pdf)

CMQCC Exclusive Breast Milk Feeding Rate

The CMQCC Exclusive Breast Milk Feeding Rate is defined as the newborns per 100 who reached at least 37 weeks of gestation (or 3000g if gestational age is missing) who received breast milk

exclusively during their stay at the hospital. Other criteria are that the newborns did not go to the neonatal intensive care unit (NICU), transfer, or die, did not reflect multiple gestation, and did not have codes for parenteral nutrition or galactosemia. General acute care hospitals report the Exclusive Breast Milk Feeding Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The CMQCC Exclusive Breast Milk Feeding Rate uses the Joint Commission National Quality Measure PC-05. For more information, please visit the following link by copying and pasting the URL into your web browser: <https://manual.jointcommission.org/releases/TJC2024B/MIF0170.html>

Number of newborn cases that were exclusively fed breast milk during their hospital stay and meet the inclusion and exclusion criteria

NA

Total number of newborn cases born in the hospital that meet the inclusion and exclusion criteria

NA

Rate of newborn cases per 100 that were exclusively fed breast milk during their hospital stay and meet the inclusion and exclusion criteria

HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate

General acute care hospitals are required to report several HCAI All-Cause Unplanned 30-Day Hospital Readmission Rates, which are broadly defined as the percentage of hospital-level, unplanned, all-cause readmissions after admission for eligible conditions within 30 days of hospital discharge for patients aged 18 years and older. These rates are first stratified based on any eligible condition, mental health disorders, substance use disorders, co-occurring disorders, and no behavioral health diagnosis. Then, each condition-stratified hospital readmission rate is further stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. For more information on the HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate, please visit the following link by copying and pasting the URL into your web browser:

https://hcai.ca.gov/wp-content/uploads/2024/10/HCAI-All-Cause-Readmission-Rate-Exclusions_ADA.pdf

HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate – Any Eligible Condition

Number of inpatient hospital admissions which occurs within 30 days of the discharge date of an eligible index admission and were 18 years or older at time of admission

176

Total number of patients who were admitted to the general acute care hospital and were 18 years or older at time of admission

1098

Rate of hospital-level, unplanned, all-cause readmissions after admission for any eligible condition

within 30 days of hospital discharge for patients aged 18 and older

16

Health Equity Plan

All general acute care hospitals report a health equity plan that identifies the top 10 disparities and a written plan to address them.

Top 10 Disparities

Disparities for each hospital equity measure are identified by comparing the rate ratios by stratification groups. Rate ratios are calculated differently for measures with preferred low rates and those with preferred high rates. Rate ratios are calculated after applying the California Health and Human Services Agency's "Data De-Identification Guidelines (DDG)," dated September 23, 2016.

Table 15. Top 10 disparities and their rate ratio values.

Measures	Stratifications	Stratification Group	Stratification Rate	Reference Group	Reference Rate	Rate Ratio
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Race and/or Ethnicity	White	23.7	Asian	12.2	1.9
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Race and/or Ethnicity	Black or African American	18.6	Asian	12.2	1.5
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Race and/or Ethnicity	Hispanic or Latino	15.7	Asian	12.2	1.3
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Age (excluding maternal measures)	50 to 64	19.9	65 and older	16	1.2
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Sex Assigned at Birth	Female	17	Male	15.1	1.1
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Expected Payor	Medicaid	16.9	Medicare	16.6	1

Plan to address disparities identified in the data

Overall Goal

To reduce unplanned 30-day hospital readmission rates across identified disparity groups through targeted, evidence-based interventions that address clinical, social, and cultural barriers.

Background

Greater El Monte Community Hospital (GEMCH) identified six key disparities, all related to readmission rates. These disparities highlight performance gaps that affect both quality of care and cost-effectiveness. Contributing factors include inconsistent follow-up care, medication non-adherence, socioeconomic challenges, transportation barriers, limited access to care, language and literacy barriers, insurance gaps, affordability of medications, early return to work, gender bias in symptom management, social role stressors, and limited access to post-acute resources.

Action Plan

To address these disparities and improve equity in care, GEMCH will implement the following interventions:

Enhanced Discharge Planning:

Implement comprehensive discharge planning for high-risk patients with chronic conditions to ensure safe transitions of care.

Post-Discharge Outreach:

Strengthen follow-up communication by contacting patients within 72 hours of discharge to assess needs and reinforce discharge instructions.

Follow-Up Appointments:

Schedule primary care or specialty follow-up appointments within 7 days of discharge for all high-risk patients.

Medication Management:

Integrate pharmacist-led medication reconciliation and counseling calls to improve adherence and reduce medication-related readmissions.

Cultural and Linguistic Competency:

Provide cultural competency training for all staff, emphasizing effective communication and health literacy. Ensure discharge instructions are available in Spanish and other prevalent languages,

written at an appropriate literacy level.

Language Access and Patient Education:

Expand bilingual staff coverage and interpreter availability during discharge education. Conduct teach-back audits to confirm patient understanding prior to discharge.

Equitable Access to Care:

Ensure all patients, regardless of demographic group, have equal access to follow-up testing, outpatient appointments, and community resources.

Performance in the priority area

General acute care hospitals are required to provide hospital equity plans that address the top 10 disparities by identifying population impact and providing measurable objectives and specific timeframes. For each disparity, hospital equity plans will address performance across priority areas: person-centered care, patient safety, addressing patient social drivers of health, effective treatment, care coordination, and access to care.

Person-centered care

GEMCH remains committed to advancing person-centered care by ensuring that every patient's values, preferences, and needs guide all aspects of their care journey. The hospital continues to build a culture that promotes respect, communication, and shared decision-making between patients, families, and healthcare teams. Providers and nurses are encouraged to actively involve patients and their families in all treatment and discharge planning discussions. GEMCH prioritizes clear communication about treatment goals and the steps needed to achieve them, supported by daily multidisciplinary rounds. At registration, patients are asked about their language preferences, and professional interpreters are available throughout their stay. Discharge and education materials are provided in multiple languages and at accessible literacy levels. Interpreter services and bilingual staff ensure equitable communication and foster a culturally sensitive care environment. In addition, the Patient Advocate conducts regular rounds in both inpatient units and the Emergency Department to ensure communication remains clear and to connect patients with their care teams if they have additional questions or requests that may enhance their experience. GEMCH reviews Press Ganey and HCAHPS feedback to identify opportunities for improvement in person-centered domains. Recent results demonstrate sustained high performance in the categories of medication communication and discharge information. Through these initiatives, GEMCH continues to make meaningful progress in fostering a person-centered culture—one in which patients feel heard, respected, and supported across all care settings.

Patient safety

GEMCH remains committed to fostering a strong culture of safety in which all employees share responsibility for preventing harm and improving care processes. The hospital emphasizes transparency, teamwork, and continuous learning as key drivers of patient safety excellence. Incident Management and Reporting: Staff are encouraged to report errors, near misses, and safety concerns openly and honestly through the hospital's Incident Management Platform (IMP) without fear of blame or retaliation. This proactive reporting supports early identification of potential risks, promotes timely interventions, and reinforces a system-based approach to safety. Just Culture: GEMCH upholds the principles of a Just Culture, focusing on learning and accountability rather than punishment. Each reported event is evaluated to understand underlying system factors, human limitations, and process gaps, ensuring that corrective actions are fair, constructive, and aimed at improvement rather than individual fault. Education and Awareness: Ongoing education reinforces safe practices in medication management, infection prevention, fall reduction, and procedural

safety. Safety huddles and simulation-based training are used to enhance situational awareness and team communication. Performance Monitoring and Improvement: Safety indicators are monitored monthly, and performance trends are reviewed through the Quality Council and Patient Safety Committee. Findings are shared with frontline teams to close the feedback loop and celebrate improvements. Notable progress has been seen in reducing hospital-acquired conditions and sustaining compliance with hand hygiene and medication reconciliation standards. Through a culture of openness, learning, and shared accountability, GEMCH continues to strengthen its patient safety framework—ensuring that every patient receives safe, reliable, and compassionate care.

Addressing patient social drivers of health

GEMCH recognizes that social and economic factors significantly impact patient outcomes and overall well-being. To address these social drivers of health (SDOH), a Social Determinants of Health Assessment is completed for every hospital admission. Upon identification of any unmet social needs, such as housing instability, food insecurity, lack of transportation, or financial barriers—the Social Work and Utilization Review teams collaborate to connect patients with appropriate community and government resources. These may include housing assistance programs, food banks, insurance enrollment, or behavioral health services. This proactive approach ensures that patients receive not only clinical care but also the social support necessary to promote recovery, reduce readmissions, and improve long-term health outcomes.

Performance in the priority area continued

Performance across all of the following priority areas.

Effective treatment

GEMCH is committed to providing safe, timely, and evidence-based care to ensure optimal patient outcomes. Clinical teams follow established bundle care protocols, such as the Sepsis Management Bundle, to standardize treatment, enhance early recognition, and reduce mortality and complications. When specialized services are required beyond the hospital's scope, GEMCH maintains contractual partnerships with higher-level care facilities to ensure timely transfer and continuity of treatment. These agreements help prevent delays in critical interventions and promote coordinated care transitions. Through consistent adherence to evidence-based protocols and strong inter-facility collaboration, GEMCH continues to improve the effectiveness and reliability of care delivery for all patients.

Care coordination

GEMCH places strong emphasis on comprehensive discharge planning and care coordination to ensure safe and seamless transitions of care. From the time of admission, the multidisciplinary team - comprising nursing, social work, and utilization review - works collaboratively to assess each patient's post-discharge needs. The hospital ensures that patients are connected with appropriate primary care providers, and community-based services before discharge. This includes coordinating home health, rehabilitation, or skilled nursing placement, arranging follow-up appointments, and ensuring medication continuity. Through proactive communication and patient-centered planning, GEMCH strives to reduce avoidable readmissions, support recovery, and promote continuity of care across all settings.

Access to care

GEMCH is dedicated to ensuring that all patients have equitable and timely access to healthcare services, regardless of their financial, cultural, or social circumstances. The hospital provides 24/7 emergency care, with on-call specialty coverage and rapid triage to ensure that every patient

receives the appropriate level of care without delay. To further enhance access, GEMCH maintains transfer and referral agreements with partnering facilities to provide higher-level or specialized care when needed. The hospital also works closely with community clinics, local agencies, and public health programs to support continuity of care for uninsured and underinsured populations. Interpreter services, financial counseling, and patient navigation support are available to reduce barriers and ensure every patient can access the care and resources necessary for their recovery and long-term health. Through these initiatives, GEMCH continues to advance its mission of providing accessible, compassionate, and equitable healthcare to the community it serves.

Methodology Guidelines

Did the hospital follow the methodology in the Measures Submission Guide? (Y/N)

Y
