

Hospital Equity Measures Report

General Information

Report Type:	Hospital Equity Measures Report
Year:	2024
Hospital Name:	GARFIELD MEDICAL CENTER
Facility Type:	General Acute Care Hospital
Hospital HCAI ID:	106190315
Report Period:	01/01/2024 - 12/31/2024
Status:	Complete
Due Date:	11/29/2025
Last Updated:	01/17/2026
Hospital Location with Clean Water and Air:	N
Hospital Web Address for Equity Report:	https://www.ahmchealth.com/gmc

Overview

Assembly Bill No. 1204 requires the Department of Health Care Access and Information (HCAI) to develop and administer a Hospital Equity Measures Reporting Program to collect and post summaries of key hospital performance and patient outcome data regarding sociodemographic information, including but not limited to age, sex, race/ethnicity, payor type, language, disability status, and sexual orientation and gender identity.

Hospitals (general acute, children's, and acute psychiatric) and hospital systems are required to annually submit their reports to HCAI. These reports contain summaries of each measure, the top 10 disparities, and the equity plans to address the identified disparities. HCAI is required to maintain a link on the HCAI website that provides access to the content of hospital equity measures reports and equity plans to the public. All submitted hospitals are required to post their reports on their websites, as well.

Laws and Regulations

For more information on Assembly Bill No. 1204, please visit the following link by copying and pasting the URL into your web browser:

https://leginfo.legislature.ca.gov/faces/billTextClient.xhtml?bill_id=202120220AB1204

Hospital Equity Measures

Joint Commission Accreditation

General acute care hospitals are required to report three structural measures based on the Commission Accreditation's Health Care Disparities Reduction and Patient-Centered Communication Accreditation Standards. For more information on these measures, please visit the following link by copying and pasting the URL into your web browser:

<https://www.jointcommission.org/standards/r3-report/r3-report-issue-36-new-requirements-to-reduce-health-care-disparities/>

The first two structural measures are scored as "yes" or "no"; the third structural measure comprises the percentages of patients by five categories of preferred languages spoken, in addition to one other/unknown language category.

Designate an individual to lead hospital health equity activities (Y = Yes, N = No).

Y

Provide documentation of policy prohibiting discrimination (Y = Yes, N = No).

Y

Number of patients that were asked their preferred language, five defined categories and one other/unknown languages category.

36509

Table 1. Summary of preferred languages reported by patients.

Languages	Number of patients who report preferring language	Total number of patients	Percentage of total patients who report preferring language (%)
English Language	19002	36509	52.0
Spanish Language	4312	36509	11.8
Asian Pacific Islander Languages	12619	36509	34.6
Middle Eastern Languages	suppressed	36509	suppressed
American Sign Language		36509	
Other Languages	suppressed	36509	suppressed

Centers for Medicare & Medicaid Services (CMS) Hospital Commitment to Health Equity Structural (HCHE) Measure

There are five domains that make up the CMS Hospital Commitment to HCHE measures. Each domain is scored as "yes" or "no." In order to score "yes," a general acute care hospital is required to confirm all the domain's attestations. Lack of one or more of the attestations results in a score of "no." For more information on the CMS Hospital Commitment to HCHE measures, please visit the following link by copying and pasting the URL into your web browser:
<https://data.cms.gov/provider-data/topics/hospitals/health-equity>

Centers for Medicare & Medicaid Services (CMS) Hospital Commitment to Health Equity Structural (HCHE) Measure Domain 1: Strategic Planning (Yes/No)

- Our hospital strategic plan identifies priority populations who currently experience health disparities.
- Our hospital strategic plan identifies healthcare equity goals and discrete action steps to achieve these goals.
- Our hospital strategic plan outlines specific resources that have been dedicated to achieving our equity goals.
- Our hospital strategic plan describes our approach for engaging key stakeholders, such as community-based organizations.

Y

CMS HCHE Measure Domain 2: Data Collection (Yes/No)

- Our hospital strategic plan identifies healthcare equity goals and discrete action steps to achieve these goals.
- Our hospital has training for staff in culturally sensitive collection of demographics and/or social determinant of health information.

- Our hospital inputs demographic and/or social determinant of health information collected from patients into structured, interoperable data elements using a certified electronic health record (EHR) technology.

Y

CMS HCHE Measure Domain 3: Data Analysis (Yes/No)

- Our hospital stratifies key performance indicators by demographic and/or social determinants of health variables to identify equity gaps and includes this information in hospital performance dashboards.

Y

CMS HCHE Measure Domain 4: Quality Improvement (Yes/No)

- Our hospital participates in local, regional or national quality improvement activities focused on reducing health disparities.

Y

CMS HCHE Measure Domain 5: Leadership Engagement (Yes/No)

- Our hospital senior leadership, including chief executives and the entire hospital board of trustees, annually reviews our strategic plan for achieving health equity.
- Our hospital senior leadership, including chief executives and the entire hospital board of trustees, annually review key performance indicators stratified by demographic and/or social factors.

Y

Centers for Medicare & Medicaid Services (CMS) Social Drivers of Health (SDOH)

General acute care hospitals are required to report on rates of screenings and intervention rates among patients above 18 years old for five health related social needs (HRSN), which are food insecurity, housing instability, transportation problems, utility difficulties, and interpersonal safety. These rates are reported separately as being screened as positive for any of the five HRSNs, positive for each individual HRSN, and the intervention rate for each positively screened HRSN. For more information on the CMS SDOH, please visit the following link by copying and pasting the URL into your web browser:

<https://www.cms.gov/priorities/innovation/key-concepts/social-drivers-health-and-health-related-social-needs>

Number of patients admitted to an inpatient hospital stay who are 18 years or older on the date of admission and are screened for all of the five HRSN

3356

Total number of patients who are admitted to a hospital inpatient stay and who are 18 years or older on the date of admission

9050

Rate of patients admitted for an inpatient hospital stay who are 18 years or older on the date of admission, were screened for an HRSN, and who screened positive for one or more of the HRSNs

37.1

Table 2. Positive screening rates and intervention rates for the five Health Related Social Needs of the Centers of Medicare & Medicaid Services (CMS) Social Drivers of Health (SDOH).

Social Driver of Health	Number of positive screenings	Rate of positive screenings (%)	Number of positive screenings who received intervention	Rate of positive screenings who received intervention (%)
Food Insecurity	29	1.0	29	1.0
Housing Instability	121	3.6	121	3.6
Transportation Problems	22	1.0	22	1.0
Utility Difficulties	19	1.0	19	1.0
Interpersonal Safety	35	1.0	35	1.0

Core Quality Measures for General Acute Care Hospitals

There are two quality measures from the Hospital Consumer Assessment of Healthcare Providers and Systems (HCAHPS) survey. For more information on the HCAHPS survey, please visit the following link by copying and pasting the URL into your web browser:

<https://hcahpsonline.org/en/survey-instruments/>

Patient Recommends Hospital

The first HCAHPS quality measure is the percentage of patients who would recommend the hospital to friends and family. For this measure, general acute care hospitals provide the percentage of patient respondents who responded "probably yes" or "definitely yes" to whether they would recommend the hospital, the percentage of the people who responded to the survey (i.e., the response rate), and the inputs for the percentages. The percentages and inputs are stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding HCAHPS question number is 19.

Number of respondents who replied "probably yes" or "definitely yes" to HCAHPS Question 19, "Would you recommend this hospital to your friends and family?"

808

Total number of respondents to HCAHPS Question 19

888

Percentage of total respondents who responded "probably yes" or "definitely yes" to HCAHPS Question 19

91.0

Total number of people surveyed on HCAHPS Question 19

4440

Response rate, or the percentage of people who responded to HCAHPS Question 19

20.0

Table 3. Patient recommends hospital by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

Race and/or Ethnicity	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
American Indian or Alaska Native					
Asian					
Black or African American					
Hispanic or Latino					
Middle Eastern or North African					
Multiracial and/or Multiethnic (two or more races)					
Native Hawaiian or Pacific Islander					
White					

Age	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Age < 18					
Age 18 to 34					
Age 35 to 49					
Age 50 to 64					
Age 65 Years and Older					

Sex assigned at birth	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Female					
Male					
Unknown					

Payer Type	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Medicare					
Medicaid					
Private					
Self-Pay					
Other					

Preferred Language	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)

Gender Identity	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Female					
Female-to-male (FTM)/ transgender male/trans man					
Male					
Male-to-female (MTF)/ transgender female/trans					
Non-conforming gender					
Additional gender category or other					
Not disclosed					

Patient Received Information in Writing

The second HCAHPS quality measure is the percentage of patients who reported receiving information in writing on symptoms and health problems to look out for after leaving the hospital. General acute care hospitals are required to provide the percentage of patient respondents who responded "yes" to being provided written information, the percentage of the people who responded to the survey (i.e., the response rate), and the inputs for these percentages. These percentages and inputs are stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding HCAHPS question number is 17.

Number of respondents who replied "yes" to HCAHPS Question 17, "During this hospital stay, did you get information in writing about what symptoms or health problems to look out for after you left the

hospital?"

746

Total number of respondents to HCAHPS Question 17

888

Percentage of respondents who responded "yes" to HCAHPS Question 17

84.0

Total number of people surveyed on HCAHPS Question 17

4440

Response rate, or the percentage of people who responded to HCAHPS Question 17

20.0

Table 4. Patient reports receiving information in writing about symptoms or health problems by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

Race and/or Ethnicity	Number of "yes" responses	Total number of responses	Percentage of "yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)

Agency for Healthcare Research and Quality (AHRQ) Indicators

General acute care hospitals are required to report on two indicators from the Agency for Healthcare Research and Quality (AHRQ). For general information about AHRQ indicators, please visit the following link by copying and pasting the URL into your web browser:
<https://qualityindicators.ahrq.gov/>

Pneumonia Mortality Rate

The Pneumonia Mortality Rate is defined as the rate of in-hospital deaths per 1,000 hospital discharges with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission for patients ages 18 years and older. General acute care hospitals report the Pneumonia Mortality Rate by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding AHRQ Inpatient Quality Indicator is 20. For more information about this indicator, please visit the following link by copying and pasting the URL into your web browser:
https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_20_Pneumonia_Mortality_Rate.pdf

Number of in-hospital deaths with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission

58

Total number of hospital discharges with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission

369

Rate of in-hospital deaths per 1,000 hospital discharges with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission

157.2

Table 5. Pneumonia Mortality Rate by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

Race and/or Ethnicity	Number of in-hospital deaths that meet the inclusion/exclusion criteria	Number of hospital discharges that meet the inclusion/exclusion criteria	Rate of in-hospital deaths per 1,000 hospital discharges that meet the inclusion/exclusion criteria (%)

Death Rate among Surgical Inpatients with Serious Treatable Complications

The Death Rate among Surgical Inpatients with Serious Treatable Complications is defined as the rate of in-hospital deaths per 1,000 surgical discharges among patients ages 18-89 years old or obstetric patients with serious treatable complications. General acute care hospitals report this measure by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding AHRQ Patient Safety Indicator is 04. For more information about this indicator, please visit the following link by copying and pasting the URL into your web browser:

California Maternal Quality Care Collaborative (CMQCC) Core Quality Measures

There are three core quality maternal measures adopted from the California Maternal Quality Care Collaborative (CMQCC).

CMQCC Nulliparous, Term, Singleton, Vertex (NTSV) Cesarean Birth Rate

The CMQCC Nulliparous, Term, Singleton, Vertex (NTSV) Cesarean Birth Rate is defined as nulliparous women with a term (at least 37 weeks gestation), singleton baby in a vertex position delivered by cesarian birth. General acute care hospitals report the NTSV Cesarean Birth Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. For more information, please visit the following link by copying and pasting the URL into your web browser:

CMQCC Vaginal Birth After Cesarean (VBAC) Rate

The CMQCC Vaginal Birth After Cesarean (VBAC) Rate is defined as vaginal births per 1,000 deliveries by patients with previous Cesarean deliveries. General acute care hospitals report the VBAC Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The VBAC Rate uses the specifications of AHRQ Inpatient Quality Indicator 22. For more information, please visit the following link by copying and pasting the URL into your web browser:

[https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_22_Vaginal_Birth_After_Cesarean_\(VBAC\)_Delivery_Rate_Uncomplicated.pdf](https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_22_Vaginal_Birth_After_Cesarean_(VBAC)_Delivery_Rate_Uncomplicated.pdf)

CMQCC Exclusive Breast Milk Feeding Rate

The CMQCC Exclusive Breast Milk Feeding Rate is defined as the newborns per 100 who reached at least 37 weeks of gestation (or 3000g if gestational age is missing) who received breast milk

exclusively during their stay at the hospital. Other criteria are that the newborns did not go to the neonatal intensive care unit (NICU), transfer, or die, did not reflect multiple gestation, and did not have codes for parenteral nutrition or galactosemia. General acute care hospitals report the Exclusive Breast Milk Feeding Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The CMQCC Exclusive Breast Milk Feeding Rate uses the Joint Commission National Quality Measure PC-05. For more information, please visit the following link by copying and pasting the URL into your web browser: <https://manual.jointcommission.org/releases/TJC2024B/MIF0170.html>

Number of newborn cases that were exclusively fed breast milk during their hospital stay and meet the inclusion and exclusion criteria

291

Total number of newborn cases born in the hospital that meet the inclusion and exclusion criteria

1830

Rate of newborn cases per 100 that were exclusively fed breast milk during their hospital stay and meet the inclusion and exclusion criteria

15.9

HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate

General acute care hospitals are required to report several HCAI All-Cause Unplanned 30-Day Hospital Readmission Rates, which are broadly defined as the percentage of hospital-level, unplanned, all-cause readmissions after admission for eligible conditions within 30 days of hospital discharge for patients aged 18 years and older. These rates are first stratified based on any eligible condition, mental health disorders, substance use disorders, co-occurring disorders, and no behavioral health diagnosis. Then, each condition-stratified hospital readmission rate is further stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. For more information on the HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate, please visit the following link by copying and pasting the URL into your web browser:

https://hcai.ca.gov/wp-content/uploads/2024/10/HCAI-All-Cause-Readmission-Rate-Exclusions_ADA.pdf

HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate – Any Eligible Condition

Number of inpatient hospital admissions which occurs within 30 days of the discharge date of an eligible index admission and were 18 years or older at time of admission

520

Total number of patients who were admitted to the general acute care hospital and were 18 years or older at time of admission

3814

Rate of hospital-level, unplanned, all-cause readmissions after admission for any eligible condition within 30 days of hospital discharge for patients aged 18 and older

13.6

Table 10. HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate for any eligible condition by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

Health Equity Plan

All general acute care hospitals report a health equity plan that identifies the top 10 disparities and a written plan to address them.

Top 10 Disparities

Disparities for each hospital equity measure are identified by comparing the rate ratios by stratification groups. Rate ratios are calculated differently for measures with preferred low rates and those with preferred high rates. Rate ratios are calculated after applying the California Health and Human Services Agency's "Data De-Identification Guidelines (DDG)," dated September 23, 2016.

Table 15. Top 10 disparities and their rate ratio values.

Measures	Stratifications	Stratification Group	Stratification Rate	Reference Group	Reference Rate	Rate Ratio
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Age (excluding maternal measures)	50 to 64	17.7	18 to 34	3.1	5.7
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Age (excluding maternal measures)	65 and older	16.7	18 to 34	3.1	5.3
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Age (excluding maternal measures)	35 to 49	9.7	18 to 34	3.1	3.1
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Expected Payor	Medicare	17.3	Private	9.2	1.9
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Race and/or Ethnicity	Black or African American	22.0	Hispanic or Latino	13.1	1.7
CMQCC Exclusive Breast Milk Feeding	Age (for maternal)	30 to 39	14.3	18 to 29	20.9	1.5
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Preferred Language	English Language	14.8	Asian/ Pacific Islander	12.4	1.2
Agency for Healthcare Research and Quality (AHRQ) Quality Indicator Pneumonia Mortality	Sex Assigned at Birth	Female	173.3	Male	146.1	1.2
Agency for Healthcare Research and Quality (AHRQ) Quality Indicator Pneumonia Mortality	Race and/or Ethnicity	Hispanic or Latino	171.4	Asian	155.3	1.1
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Race and/or Ethnicity	White	14.2	Hispanic or Latino	13.1	1.1

Plan to address disparities identified in the data

Disparity 1-3 Plan: Age Related Disparities (50-64, 65+, 35-49 vs. 18-34)

Population Impact: Adults 35-65+ experiencing higher unplanned readmissions compared to younger patients

Action Planned:

1. Develop age-specific care transition programs (e.g. medication reconciliation, caregiver engagement and continue on follow up discharge calls)
2. Focused on chronic disease self-management education
3. Use of friendly patient education handout
4. Employ risk assessment tool to identify patients likely to return
5. Improve patient/family education with teach-back and focus on Rx fill and use.

Measurable Objectives: Reduce 30-day readmission rate ratio for ages 50-64 from 5.5 to 4.5, and for 65+ from 4.9 to 3.5.

Timeframe: Launch interventions on 1Q2026 and monitor annually.

Disparity 4 Plan: Payer Status-Readmission (Medicare vs. Private)

Population Impact: Patients with Medicare show higher readmission rates compared to privately insured

Action Planned:

1. Expand care management and social work resources for Medicare patients
2. Connect patients to community-based support (transportation, medication assistance)

3. Prioritize high-risk Medicare patients and follow up care teams.

Measurable Objectives: Reduce Medicare readmission rate from 17.2 to 12.0 within 24 months.

Timeframe: Implement by 1Q2026 and evaluate annually.

Disparity 5 Plan: HCAI All-cause unplanned 30-day readmitted rate by race and/or Ethnicity (Black/African American vs. Hispanic/Latino)

Population Impact: Black/African American patients face higher readmission rates (22 vs 12.5)

Action Planned:

1. Strengthen culturally competent discharge planning and follow up
2. Provide community-based health references and home visits to Black patients with chronic disease.
3. Focused on chronic disease self-management education
4. Use of friendly patient education handout
5. Employ risk assessment tool to identify patients likely to return
6. Improve patient/family education with teach-back and focus on Rx fill and use.

Measurable Objectives: Narrow disparity rate from 1.8 to 1.4 within 2 years.

Timeframe: Initiate by 1Q 2026 and track annually.

Disparity 6 Plan: CMQCC Exclusive Breast Milk Feeding by Age 30-39

Population Impact: Age 30-39 shows lower compliance on exclusive breast milk feeding rate (14.3 vs 20.9)

Action Planned:

1. Establish a multidisciplinary breastfeeding support team and designated lactation nurse to educate and support patients.
2. Post-partum Director to continue to monitor progress and coordinate interventions
3. Educate all staff on the importance of early initiation of breastfeeding within 1 hour of birth

Measurable Objectives: Increase exclusive breastfeeding rate from 14.3 to 20 within the next two years

Timeframe: Initiate by 1Q2026 and evaluate annually

Disparity 7: HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate by Preferred Language English

Population Impact: Patients with English as preferred language shows higher rate of readmission as compared to patients with Asian/Pacific Islander Languages

Action Planned:

1. Focused on chronic disease self-management education
2. Use of friendly patient education handout
3. Employ risk assessment tool to identify patients likely to return
4. Improve patient/family education with teach-back and focus on Rx fill and use.

Measurable Objectives: Narrow disparity rate from 1.2 to 1.0 within 2 years.

Timeframe: Start 1Q2026 and review annually

Disparity 8 Plan: Agency for Healthcare Research and Quality (AHRQ) Quality Indicator Pneumonia Mortality Rate Sex assigned at birth (Male vs Female)

Population Impact: Female patients have slightly higher pneumonia mortality compared to male patients in 2024 (184.9 vs 164.4)

Action Planned:

1. Early sepsis and pneumonia detection protocols has been implemented
2. Increase female targeted preventive care campaigns
3. Focused education on pneumonia patients

Measurable Objectives: Reduce mortality rate disparity ratio from 1.1 to 1.0 within a year

Timeframe: Start 1Q2026 and review annually

Disparity 9 and 10 Plan: HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate by Race and/or Ethnicity (White and Asian vs Hispanic/Latino)

Population Impact: White and Asian patients face higher readmission rate

Action Planned:

1. Strengthen culturally competent discharge planning and follow up
2. Provide community-based health references and home visits to Black patients with chronic disease.
3. Focused on chronic disease self-management education
4. Use of friendly patient education handout
5. Employ risk assessment tool to identify patients likely to return
6. Improve patient/family education with teach-back and focus on Rx fill and use.

Measurable Objectives: Narrow disparity rate from 1.1 to 1.0 within 2 years.

Timeframe: Start 1Q2026 and review annually

Performance in the priority area

General acute care hospitals are required to provide hospital equity plans that address the top 10 disparities by identifying population impact and providing measurable objectives and specific timeframes. For each disparity, hospital equity plans will address performance across priority areas: person-centered care, patient safety, addressing patient social drivers of health, effective treatment, care coordination, and access to care.

Person-centered care

Priority Area 1: Person-Centered Care

Performance Indicator:

1. Achieved more than 95 percent of patients receive care with language access services when needed.
2. Documentation of preferred language and cultural needs in more than 95 percent of patient records.

3. Increased referrals to community resources addressing social needs.
4. Increased participation from underrepresented groups in family conference survey and focus groups.

Impact: •

1. Patient receive care that honors language preference and reducing misunderstandings and improving clinical outcomes.
2. Care models reflect lived experience and community priorities, strengthening relevance, trust and equity in hospital services.
3. Patients receive seamless, coordinated support that reduces barriers and improves continuity, especially for those disproportionately affected by inequities.

Patient safety

Performance Indicator:

1. Annual review of safety events (falls, medication errors, pressure injuries, readmissions) stratified by race, ethnicity, language, age and insurance type.
2. Completion of risk assessments (falls, skin integrity, medication risk) for all patients at admissions
3. 100 percent of high-risk or time sensitive safety instructions (e.g. informed consent, medication instructions, discharge plans) provided in the patient's preferred language.
4. 100 percent of patients receive culturally and linguistically appropriate discharge safety instructions.

Impact:•

1. All patients groups experience safer care with fewer preventable harms, ensuring that no population experiences disproportionately higher risk.
2. High-reliability, standardized safety practices lead to consistent protection for all patients, narrowing gaps in adverse events.
3. Patients with limited English proficiency receive clear, accurate information, reducing misunderstanding and improving adherence to safety instructions.
4. Patients are safer after leaving the hospital with improved understanding of care plans and lower risk of harm or return to care.

Addressing patient social drivers of health

Performance Indicator:

1. More than 95 percent of admitted patients are screened for the key SDOH needs (housing, food insecurity, transportation, utilities, safety)
2. Increase in documentation of SDOH needs in medical record across all demographic groups.
3. Increased patient understanding of care plans as measured by teach-back methods

Impact:•

1. The hospital gains a clearer understanding of social factors affecting patient health, enabling quicker and more equitable support.
2. Data-driven insights allow the hospital to target resources where inequities are most significant and measure progress transparently.
3. Patients are better equipped to manage their health regardless of literacy level, reducing disparities in adherence and outcomes.

Performance in the priority area continued

Performance across all of the following priority areas.

Effective treatment

Performance Indicator:

1. More than 95 percent adherence to clinical guidelines for all patient groups.
2. More than 90 percent of targeted services delivered within established time standards for all patient populations.
3. Increased use of medication reconciliation and culturally appropriate medication education.

Impact:•

1. All patients receive timely, appropriate treatment based on best practices, reducing avoidable complications and improving outcomes for historically underserved populations.
2. Patients receive prompt care regardless of background, leading to better recovery, reduced disease progression, and more equitable results.
3. Patients understand and access the medications they need, decreasing preventable adverse events and improving disease control.

Care coordination

Performance Indicator:

1. More 95 percent of patients across all demographic groups receive a standardized discharge plan, including medication review, follow up appointments and discharge instructions.
2. Increased follow up coordination support for high-risk patients.
3. Reduction in disparities in medication errors or confusion post-discharge.
4. Availability of discharge education in preferred language for all patients.

Impact:

1. All patients experience safe, well-supported transitions from hospital to home or other settings, reducing avoidable complications and promoting equitable recovery.
2. Patients maintain continuity of care regardless of barriers, improving long term outcomes and decreasing preventable emergency visits.
3. Patients leave the hospital with a clear, accurate medication plan, reducing adverse events and supporting equitable treatment adherence.
4. Patients and families understand the care plan and next steps, resulting in safer transitions and fewer inequities in comprehension or adherence.

Access to care

Performance Indicator:

1. Increased assistance with insurance enrollment and charity care navigation for uninsured or underinsured patients.
2. Increased referrals for community programs for patients with identified needs.
3. Stratification of access metrics by race, ethnicity, language and gender.

Impact:

1. More patients can access necessary healthcare without financial strain, reducing inequities driven by income or insurance status.
2. Patients receive support that improve access, continuity and timely engagement in care.
3. Data-driven action ensures the hospital targets gaps accurately and improves access for populations most affected by inequities

Methodology Guidelines

Did the hospital follow the methodology in the Measures Submission Guide? (Y/N)
