

# Hospital Equity Measures Report

## General Information

Report Type:	Hospital Equity Measures Report
Year:	2024
Hospital Name:	FRENCH HOSPITAL MEDICAL CENTER
Facility Type:	General Acute Care Hospital
Hospital HCAI ID:	106400480
Report Period:	1/1/2024 - 12/31/2024
Status:	Complete
Due Date:	09/30/2025
Last Updated:	01/17/2026
Hospital Location with Clean Water and Air:	Y
Hospital Web Address for Equity Report:	<a href="http://www.dignityhealth.org/central-coast/locations/frenchhospital">www.dignityhealth.org/central-coast/locations/frenchhospital</a>

## Overview

Assembly Bill No. 1204 requires the Department of Health Care Access and Information (HCAI) to develop and administer a Hospital Equity Measures Reporting Program to collect and post summaries of key hospital performance and patient outcome data regarding sociodemographic information, including but not limited to age, sex, race/ethnicity, payor type, language, disability status, and sexual orientation and gender identity.

Hospitals (general acute, children's, and acute psychiatric) and hospital systems are required to annually submit their reports to HCAI. These reports contain summaries of each measure, the top 10 disparities, and the equity plans to address the identified disparities. HCAI is required to maintain a link on the HCAI website that provides access to the content of hospital equity measures reports and equity plans to the public. All submitted hospitals are required to post their reports on their websites, as well.

## Laws and Regulations

For more information on Assembly Bill No. 1204, please visit the following link by copying and pasting the URL into your web browser:  
[https://leginfo.legislature.ca.gov/faces/billTextClient.xhtml?bill\\_id=202120220AB1204](https://leginfo.legislature.ca.gov/faces/billTextClient.xhtml?bill_id=202120220AB1204)

## Hospital Equity Measures

### Joint Commission Accreditation

General acute care hospitals are required to report three structural measures based on the Commission Accreditation's Health Care Disparities Reduction and Patient-Centered Communication Accreditation Standards. For more information on these measures, please visit the following link by copying and pasting the URL into your web browser:

The first two structural measures are scored as "yes" or "no"; the third structural measure comprises the percentages of patients by five categories of preferred languages spoken, in addition to one other/unknown language category.

Designate an individual to lead hospital health equity activities (Y = Yes, N = No).

Y

Provide documentation of policy prohibiting discrimination (Y = Yes, N = No).

Y

Number of patients that were asked their preferred language, five defined categories and one other/unknown languages category.

37174

Table 1. Summary of preferred languages reported by patients.

Languages	Number of patients who report preferring language	Total number of patients	Percentage of total patients who report preferring language (%)
English Language	35586	37174	95.7
Spanish Language	1247	37174	3.4
Asian Pacific Islander Languages	47	37174	0.1
Middle Eastern Languages	suppressed	37174	suppressed
American Sign Language	suppressed	37174	suppressed
Other Languages	61	37174	0.2

**Centers for Medicare & Medicaid Services (CMS) Hospital Commitment to Health Equity Structural (HCHE) Measure**

There are five domains that make up the CMS Hospital Commitment to HCHE measures. Each domain is scored as "yes" or "no." In order to score "yes," a general acute care hospital is required to confirm all the domain's attestations. Lack of one or more of the attestations results in a score of "no." For more information on the CMS Hospital Commitment to HCHE measures, please visit the following link by copying and pasting the URL into your web browser:

<https://data.cms.gov/provider-data/topics/hospitals/health-equity>

**Centers for Medicare & Medicaid Services (CMS) Hospital Commitment to Health Equity Structural (HCHE) Measure Domain 1: Strategic Planning (Yes/No)**

- Our hospital strategic plan identifies priority populations who currently experience health disparities.
- Our hospital strategic plan identifies healthcare equity goals and discrete action steps to achieve these goals.
- Our hospital strategic plan outlines specific resources that have been dedicated to achieving our equity goals.
- Our hospital strategic plan describes our approach for engaging key stakeholders, such as community-based organizations.

Y

**CMS HCHE Measure Domain 2: Data Collection (Yes/No)**

- Our hospital strategic plan identifies healthcare equity goals and discrete action steps to achieve these goals.
- Our hospital has training for staff in culturally sensitive collection of demographics and/or social determinant of health information.
- Our hospital inputs demographic and/or social determinant of health information collected from patients into structured, interoperable data elements using a certified electronic health record (EHR) technology.

Y

CMS HCHE Measure Domain 3: Data Analysis (Yes/No)

- Our hospital stratifies key performance indicators by demographic and/or social determinants of health variables to identify equity gaps and includes this information in hospital performance dashboards.

Y

CMS HCHE Measure Domain 4: Quality Improvement (Yes/No)

- Our hospital participates in local, regional or national quality improvement activities focused on reducing health disparities.

Y

CMS HCHE Measure Domain 5: Leadership Engagement (Yes/No)

- Our hospital senior leadership, including chief executives and the entire hospital board of trustees, annually reviews our strategic plan for achieving health equity.
- Our hospital senior leadership, including chief executives and the entire hospital board of trustees, annually review key performance indicators stratified by demographic and/or social factors.

Y

Centers for Medicare & Medicaid Services (CMS) Social Drivers of Health (SDOH)

General acute care hospitals are required to report on rates of screenings and intervention rates among patients above 18 years old for five health related social needs (HRSN), which are food insecurity, housing instability, transportation problems, utility difficulties, and interpersonal safety. These rates are reported separately as being screened as positive for any of the five HRSNs, positive for each individual HRSN, and the intervention rate for each positively screened HRSN. For more information on the CMS SDOH, please visit the following link by copying and pasting the URL into your web browser:

<https://www.cms.gov/priorities/innovation/key-concepts/social-drivers-health-and-health-related-social-needs>

Number of patients admitted to an inpatient hospital stay who are 18 years or older on the date of admission and are screened for all of the five HRSN

2936

Total number of patients who are admitted to a hospital inpatient stay and who are 18 years or older on the date of admission

3888

Rate of patients admitted for an inpatient hospital stay who are 18 years or older on the date of admission, were screened for an HRSN, and who screened positive for one or more of the HRSNs

20

Table 2. Positive screening rates and intervention rates for the five Health Related Social Needs of the Centers of Medicare & Medicaid Services (CMS) Social Drivers of Health (SDOH).

Social Driver of Health	Number of positive screenings	Rate of positive screenings (%)	Number of positive screenings who received intervention	Rate of positive screenings who received intervention (%)
Food Insecurity	147	5	0	0
Housing Instability	94	3.2	0	0
Transportation Problems	381	13	0	0
Utility Difficulties	113	3.8	0	0
Interpersonal Safety	60	2	0	0

## Core Quality Measures for General Acute Care Hospitals

There are two quality measures from the Hospital Consumer Assessment of Healthcare Providers and Systems (HCAHPS) survey. For more information on the HCAHPS survey, please visit the following link by copying and pasting the URL into your web browser:

<https://hcahpsonline.org/en/survey-instruments/>

## Patient Recommends Hospital

The first HCAHPS quality measure is the percentage of patients who would recommend the hospital to friends and family. For this measure, general acute care hospitals provide the percentage of patient respondents who responded "probably yes" or "definitely yes" to whether they would recommend the hospital, the percentage of the people who responded to the survey (i.e., the response rate), and the inputs for the percentages. The percentages and inputs are stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding HCAHPS question number is 19.

Number of respondents who replied "probably yes" or "definitely yes" to HCAHPS Question 19, "Would you recommend this hospital to your friends and family?"

805

Total number of respondents to HCAHPS Question 19

839

Percentage of total respondents who responded "probably yes" or "definitely yes" to HCAHPS Question 19

95.9

Total number of people surveyed on HCAHPS Question 19

3107

Response rate, or the percentage of people who responded to HCAHPS Question 19

27

Table 3. Patient recommends hospital by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

<b>Race and/or Ethnicity</b>	<b>Number of "probably yes" or "definitely yes" responses</b>	<b>Total number of responses</b>	<b>Percent of "probably yes" or "definitely yes" responses (%)</b>	<b>Total number of patients surveyed</b>	<b>Response rate of patients surveyed (%)</b>
<b>American Indian or Alaska Native</b>					
<b>Asian</b>					
<b>Black or African American</b>

Don't know					
Not disclosed					

  

<b>Gender Identity</b>	<b>Number of "probably yes" or "definitely yes" responses</b>	<b>Total number of responses</b>	<b>Percent of "probably yes" or "definitely yes" responses (%)</b>	<b>Total number of patients surveyed</b>	<b>Response rate of patients surveyed (%)</b>
Female					
Female-to-male (FTM)/ transgender male/trans man					
Male					
Male-to-female (MTF)/ transgender female/trans woman					
Non-conforming gender					
Additional gender category or other					
Not disclosed					

## Patient Received Information in Writing

The second HCAHPS quality measure is the percentage of patients who reported receiving information in writing on symptoms and health problems to look out for after leaving the hospital. General acute care hospitals are required to provide the percentage of patient respondents who responded "yes" to being provided written information, the percentage of the people who responded to the survey (i.e., the response rate), and the inputs for these percentages. These percentages and inputs are stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding HCAHPS question number is 17.

Number of respondents who replied "yes" to HCAHPS Question 17, "During this hospital stay, did you get information in writing about what symptoms or health problems to look out for after you left the

hospital?"

747  
Total number of respondents to HCAHPS Question 17  
839

Percentage of respondents who responded "yes" to HCAHPS Question 17  
89

Total number of people surveyed on HCAHPS Question 17  
3107

Response rate, or the percentage of people who responded to HCAHPS Question 17  
27

Table 4. Patient reports receiving information in writing about symptoms or health problems by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

## Agency for Healthcare Research and Quality (AHRQ) Indicators

General acute care hospitals are required to report on two indicators from the Agency for Healthcare Research and Quality (AHRQ). For general information about AHRQ indicators, please visit the following link by copying and pasting the URL into your web browser:

<https://qualityindicators.ahrq.gov/>

## Pneumonia Mortality Rate

The Pneumonia Mortality Rate is defined as the rate of in-hospital deaths per 1,000 hospital discharges with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission for patients ages 18 years and older. General acute care hospitals report the Pneumonia Mortality Rate by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding AHRQ Inpatient Quality Indicator is 20. For more information about this indicator, please visit the following link by copying and pasting the URL into your web browser:

[https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI\\_20\\_Pneumonia\\_Mortality\\_Rate.pdf](https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_20_Pneumonia_Mortality_Rate.pdf)

## Death Rate among Surgical Inpatients with Serious Treatable Complications

The Death Rate among Surgical Inpatients with Serious Treatable Complications is defined as the rate of in-hospital deaths per 1,000 surgical discharges among patients ages 18-89 years old or obstetric patients with serious treatable complications. General acute care hospitals report this measure by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding AHRQ Patient Safety Indicator is 04. For more information about this indicator, please visit the following link by copying and pasting the URL into your web browser:  
[https://qualityindicators.ahrq.gov/Downloads/Modules/PSI/V2023/TechSpecs/PSI\\_04\\_Death\\_Rate\\_among\\_Surgical\\_Inpatients\\_with\\_Serious\\_Treatable\\_Complications.pdf](https://qualityindicators.ahrq.gov/Downloads/Modules/PSI/V2023/TechSpecs/PSI_04_Death_Rate_among_Surgical_Inpatients_with_Serious_Treatable_Complications.pdf)

## California Maternal Quality Care Collaborative (CMQCC) Core Quality Measures

There are three core quality maternal measures adopted from the California Maternal Quality Care Collaborative (CMQCC).

### CMQCC Nulliparous, Term, Singleton, Vertex (NTSV) Cesarean Birth Rate

The CMQCC Nulliparous, Term, Singleton, Vertex (NTSV) Cesarean Birth Rate is defined as nulliparous women with a term (at least 37 weeks gestation), singleton baby in a vertex position delivered by cesarian birth. General acute care hospitals report the NTSV Cesarean Birth Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. For more information, please visit the following link by copying and pasting the URL into your web browser:

<https://www.cmqcc.org/quality-improvement-toolkits/supporting-vaginal-birth/ntsv-cesarean-birth-measure-specifications>

## CMQCC Vaginal Birth After Cesarean (VBAC) Rate

The CMQCC Vaginal Birth After Cesarean (VBAC) Rate is defined as vaginal births per 1,000 deliveries by patients with previous Cesarean deliveries. General acute care hospitals report the VBAC Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The VBAC Rate uses the specifications of AHRQ Inpatient Quality Indicator 22. For more information, please visit the following link by copying and pasting the URL into your web browser:

[https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI\\_22\\_Vaginal\\_Birth\\_After\\_Cesarean\\_\(VBAC\)\\_Delivery\\_Rate\\_Uncomplicated.pdf](https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_22_Vaginal_Birth_After_Cesarean_(VBAC)_Delivery_Rate_Uncomplicated.pdf)

Number of vaginal delivery among cases with previous Cesarean delivery that meet the inclusion and exclusion criteria

0

Total number of birth discharges with previous Cesarean delivery that meet the inclusion and exclusion criteria

## Rate of vaginal delivery per 1,000 deliveries by patients with previous Cesarean deliveries

0

## CMQCC Exclusive Breast Milk Feeding Rate

The CMQCC Exclusive Breast Milk Feeding Rate is defined as the newborns per 100 who reached at least 37 weeks of gestation (or 3000g if gestational age is missing) who received breast milk

exclusively during their stay at the hospital. Other criteria are that the newborns did not go to the neonatal intensive care unit (NICU), transfer, or die, did not reflect multiple gestation, and did not have codes for parenteral nutrition or galactosemia. General acute care hospitals report the Exclusive Breast Milk Feeding Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The CMQCC Exclusive Breast Milk Feeding Rate uses the Joint Commission National Quality Measure PC-05. For more information, please visit the following link by copying and pasting the URL into your web browser: <https://manual.jointcommission.org/releases/TJC2024B/MIF0170.html>

Number of newborn cases that were exclusively fed breast milk during their hospital stay and meet the inclusion and exclusion criteria

NA

Total number of newborn cases born in the hospital that meet the inclusion and exclusion criteria

NA

Rate of newborn cases per 100 that were exclusively fed breast milk during their hospital stay and meet the inclusion and exclusion criteria

NA

## HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate

General acute care hospitals are required to report several HCAI All-Cause Unplanned 30-Day Hospital Readmission Rates, which are broadly defined as the percentage of hospital-level, unplanned, all-cause readmissions after admission for eligible conditions within 30 days of hospital discharge for patients aged 18 years and older. These rates are first stratified based on any eligible condition, mental health disorders, substance use disorders, co-occurring disorders, and no behavioral health diagnosis. Then, each condition-stratified hospital readmission rate is further stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. For more information on the HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate, please visit the following link by copying and pasting the URL into your web browser:

[https://hcai.ca.gov/wp-content/uploads/2024/10/HCAI-All-Cause-Readmission-Rate-Exclusions\\_ADA.pdf](https://hcai.ca.gov/wp-content/uploads/2024/10/HCAI-All-Cause-Readmission-Rate-Exclusions_ADA.pdf)

## HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate – Any Eligible Condition

Number of inpatient hospital admissions which occurs within 30 days of the discharge date of an eligible index admission and were 18 years or older at time of admission

310

Total number of patients who were admitted to the general acute care hospital and were 18 years or older at time of admission

3733

Rate of hospital-level, unplanned, all-cause readmissions after admission for any eligible condition

within 30 days of hospital discharge for patients aged 18 and older

### 8.3

## Health Equity Plan

All general acute care hospitals report a health equity plan that identifies the top 10 disparities and a written plan to address them.

## Top 10 Disparities

Disparities for each hospital equity measure are identified by comparing the rate ratios by stratification groups. Rate ratios are calculated differently for measures with preferred low rates and those with preferred high rates. Rate ratios are calculated after applying the California Health and Human Services Agency's "Data De-Identification Guidelines (DDG)," dated September 23, 2016.

Table 15. Top 10 disparities and their rate ratio values.

Measures	Stratifications	Stratification Group	Stratification Rate	Reference Group	Reference Rate	Rate Ratio
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Age (excluding maternal measures)	50 to 64	12	18 to 34	2.9	4.1
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Age (excluding maternal measures)	65 and older	9.1	18 to 34	2.9	3.1
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Age (excluding maternal measures)	35 to 49	5.7	18 to 34	2.9	1.9
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Expected Payor	Medicaid	9.7	Private	5.9	1.7
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Expected Payor	Medicare	9.1	Private	5.9	1.6
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Sex Assigned at Birth	Male	9.9	Female	6.9	1.4
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Race and/or Ethnicity	Hispanic or Latino	9.5	White	8.5	1.1

## Plan to address disparities identified in the data

### Health Equity Planned Actions to Address Identified Top Disparities:

To understand why the identified populations are having increased readmissions there needs to be additional information to help identify the "why" related to these readmissions to assist in creating a meaningful intervention. Each of the actions planned below address person centered care, patient safety, social drivers of health, effective treatment, care coordination and access to care.

#### Actions Planned:

1. Gain better understanding around the "why" of readmissions and barriers to health:
  - a. Specific: By October 31, 2025, Care Coordination will consistently assess, document, and track the causes of readmissions (from social determinants to effective care concerns), reporting qualitative and quantitative data weekly at the Hospital Safety Huddle and monthly at the Clinical Excellence Committee.
  - b. Measurable: Data on readmission causes will be collected and reported.
  - c. Achievable: Care Coordination currently assesses and reports; this goal formalizes and refines the reporting frequency and venues.
  - d. Relevant: This directly contributes to understanding and addressing readmission drivers.
  - e. Time-bound: By October 31, 2025.
2. Multidisciplinary assessment of data and development of health disparity plans around readmissions:
  - a. Specific: By December 31, 2025, a multidisciplinary team at the Clinical Excellence Committee will implement a monthly review process for readmission data, creating, implementing, and evaluating interventions to reduce readmissions.
  - b. Measurable: Interventions created, implemented, and evaluated monthly; readmission rates will be tracked (PDSA model).
  - c. Achievable: This builds on existing data review and intervention processes.
  - d. Relevant: Directly addresses top health care disparities outcome of readmissions.
  - e. Time-bound: By December 31, 2025 (for process establishment), with bi-monthly evaluation ongoing.
  - f. Time-bound: February 2026 (session), March 15, 2026 (data review), April 15, 2026 (intervention implementation).

3. Review other data sources, such as event reports and patient experience data, to assess health disparities:
  - a. Specific: By December 31, 2025, event reports and patient experience data will be assessed annually to identify causes related to health disparities, specifically language, culture, and ethnicity, to inform disparity reduction efforts.
  - b. Measurable: Annual assessment completed, with findings documented.
  - c. Achievable: For the event reports, this is an existing annual process that can be focused on health disparities. For patient experience data this is a new process with agreement between patient experience leader and health disparity leader to meet quarterly to start looking at the data through a disparity lens.
  - d. Relevant: Helps identify underlying causes of health disparities through untapped data resources.
  - e. Time-bound: By December 31, 2026 (for the annual assessment).
4. Communication of health disparity identification data, actions put in place and evaluation of interventions to leaders within the hospital: will be reported to the Senior Leadership Team at the Monthly Quality meeting. Additionally this information will be shared at the all manager Quality Meeting quarterly.
  - a. Specific: By October 31, 2026, health disparity data, implemented actions, and evaluation outcomes will be consistently reported to the Senior Leadership Team at monthly Quality meetings and shared quarterly at the all-manager Quality Meeting.
  - b. Measurable: Reporting occurs monthly to the Senior Leadership Team and quarterly to all managers.
  - c. Achievable: This integrates into existing meeting structures.
  - d. Relevant: Ensures accountability and broad awareness of health equity initiatives and progress.
  - e. Time-bound: By October 31, 2026 (for establishment of consistent reporting).

## Performance in the priority area

General acute care hospitals are required to provide hospital equity plans that address the top 10 disparities by identifying population impact and providing measurable objectives and specific timeframes. For each disparity, hospital equity plans will address performance across priority areas: person-centered care, patient safety, addressing patient social drivers of health, effective treatment, care coordination, and access to care.

### Person-centered care

French Hospital Medical Center has established a contract with Herencia Indígena, a local agency which provides culturally appropriate Mixteco interpreters to support medical staff and the Mixteco community residing in San Luis Obispo County.

A Human Trafficking (Suspected Abuse Task Force) initiative has been in care standards since fiscal year 2015 . Key healthcare personnel within the Dignity system of care partnered to form the Suspected Abuse Task Force with a primary goal of education, process/protocol, and policy implementation.

The Street Medicine Outreach Program team partners with the Salvation Army of San Luis Obispo to address the needs of those unsheltered in the north county. The outings are conducted every third Thursday of the month. The team is composed of two physicians, a social worker, and two community health workers. Since March 2023 the team have encountered 158 unsheltered individuals in the north county: Paso Robles and Atascadero.

Our Prenatal and New Parent Education Program provided education to mothers, and their partners, regarding prenatal preparation, birth classes and family support classes. Our breastfeeding clinic in San Luis Obispo clinic has provided 1,909 lactation consultations for FY 2025.

Behavioral Wellness Center (Crisis Stabilization Unit) provides a safe haven for those individuals experiencing a mental health crisis.

Employees donated to the following drives: Salvation Army Angel Tree, SLO Food Bank Turkey Trot, and Vitalant Blood drives.

French Hospital Medical Center engages in a variety of essential community building activities as a means to further the mission of advocacy, partnership, and collaboration. Activities during FY2025 included executive, system leadership and staff involvement in community boards such as: Hospital Council of Northern and Central California Board, American Heart Association, Adult Services Policy Council, Long Term Ombudsman program, SLO County Farmworker Task Force, CenCal, SLO County Human Trafficking Task Force, and Promotores Collaborative of SLO County.

Additionally, over the last year all managers have received training in implicit bias, and clinicians are trained in trauma-informed care. The Suspected Abuse Task Force regularly convenes to discuss cases and identify areas for ongoing learning, all contributing to our enhanced performance in person-centered care. Most recently our physician over the Medical Safe Haven program presented to the Emergency Department physicians about the human trafficking safe haven program as well as the importance of trauma informed care for health equity for this very vulnerable population. The next group to be presented to will be a group of community physicians and leaders over our community clinics.

#### Patient safety

Our hospitals are committed to providing safe, high-quality care to all patients. We recognize that achieving true patient safety requires a proactive and data-driven approach to identify, understand and dismantle inequities that disproportionately impact vulnerable populations. Our commitment has been to embed health equity principles into our patient safety work, ensuring our efforts lead to measurable improvements in safety outcomes for all individuals, regardless of their background.

To deepen our understanding of healthcare inequities in patient safety, data aggregation from our incident reporting system includes extracting demographic information as well as health inequities and disparities. Analysis of the data is reviewed by a multidisciplinary team, including representatives from our Health Equity Committee, patient safety leadership, and relevant clinical departments.

Safety events are investigated and reviewed using the Event Investigation & Analysis (or Root Cause Analysis) and Apparent Cause Analysis with an equity lens. When patient safety events occur our investigations go beyond immediate causal factors to explore underlying systemic inequities and social determinants of health that may have contributed.

Patient safety initiatives, policies, and practices are designed with the diverse needs of our patient population in mind by using input, where appropriate, from our community partners and patient representatives.

We are committed to continuous learning and improvement in our patient safety equity work by adapting strategies based on new data, research, and community feedback. Our transparent sharing

of successes and challenges demonstrates accountability, fostering a highly reliable environment focused on equitable outcomes and ensuring all patients benefit from the highest standards of safety and care.

#### Areas of Work Within Patient Safety and Equity:

Recognizing the critical importance of early signs of infection, a quality and patient safety project was launched to provide education on infection signs in languages that best represent our community, empowering individuals to seek timely medical attention before conditions escalate.

In-person, culturally sensitive Mixteco and Spanish translators have been implemented and utilized as part of the healthcare team. This critical resource eliminates language barriers and respects diverse cultural contexts, ensuring that all patients can fully engage in their care and that safety information is understood, preventing misunderstandings and promoting optimal outcomes.

Understanding and mitigating falls is crucial for prevention of patient harm. To address this important health concern with our diverse community, we recognized the need for fall risk and prevention education materials specifically in Spanish. The materials and education ensures that language is not a barrier to receiving essential safety information, allowing Spanish-speaking patients and their caregivers to fully engage in strategies that promote balance, mobility and a safer environment.

#### Addressing patient social drivers of health

Health Need: Culturally sensitive and accepting healthcare trusted by the community.

- Strategy or Program: Colibrí Project: Cultural Awareness Training
- Summary Description: Training will equip clinicians with cultural knowledge and tools to be utilized when caring for our Mixteco speaking population, increase patient-provider trust, and decrease moral distress caregiver staff that occurs when medically indicated options are declined.
- Strategy or Program: Peer to Peer Support
- Summary Description: A peer to peer support program for staff to decrease anxiety, depression, stress, and burnout.
- Goal and Impact: To improve patient trust, health outcomes and healthcare experiences by sharing cultural, historical and language differences when serving the community.
- Collaborators: Herencia Indígena, hospital administration, and other hospital departments.

Health Need: Readily available healthcare and navigation assistance in patients' spoken language.

- Strategy or Program: Mixteco Language Identifier Tool
- Summary Description: Language identifier tool that pinpoints the town where the patient's preferred dialect is from to match to the correct interpreter.
- Strategy or Program: Dignity Health Spanish Interpreter Certification program
- Summary Description: Program that certifies bilingual staff who pass a written and oral exam to provide Spanish interpreter services to patients.
- Goal and Impact: To improve patient communication between healthcare team and patient to enhance health outcomes and healthcare experiences.
- Collaborators: Hospital Administration, all hospital departments, and Pacific Central Coast Health Centers.

Health Need: Unmet vital conditions, including transportation, finances, housing (including the unhoused population), education, the environment, and childcare.

- Strategy or Program: Community Health Improvement Grant Program
- Summary Description: Fund projects whose goal is to meet the vital condition(s) of providing

basic needs, housing, transportation, and childcare.

- Strategy or Program: Financial Assistance Programs
- Summary Description: Financial assistance programs are offered to medically underserved individuals to cover basic needs, hospital bills, transportation vouchers, and hotel vouchers. The cancer resource center also provides financial assistance for basic needs (mortgage payment assistance, rent, gas cards) to community members affected by cancer.
- Strategy or Program: Patient Transportation
- Summary Description: The cancer centers provide vouchers for transportation. Transportation for discharged patients is also provided by a third-party through care coordination.
- Goal and Impact: To help address the unmet vital conditions among the most marginalized in the community.
- Collaborators: Planned collaboration with non-for-profit community partners, hospital care coordination team, transition care center, Mission Hope, Hearst Cancer Resource Center and Pacific Central Coast Health Centers.

Health Need: Access to improved behavioral health, including substance use disorder treatment, and navigation of services with a special emphasis on the unhoused population.

- Strategy or Program: Community Health Improvement Grant program
- Summary Description: Fund projects whose goal is to improve behavioral health, offer substance use disorder treatment, and navigation services.
- Strategy or Program: Behavioral Wellness Support Groups
- Summary Description: Community support groups that provide mental health support to families and individuals that are impacted by perinatal mood and anxiety disorder (PMAD), diabetes, and other chronic illnesses.
- Strategy or Program: Behavioral Wellness Center (Crisis Stabilization Unit)
- Summary Description: The Behavioral Wellness Center provides a safe haven for those individuals experiencing a mental health crisis.
- Strategy or Program: Substance Use Navigation Program
- Summary Description: Dedicated social workers assist patients presenting with Substance Use Disorder to link with appropriate resources.
- Goal and Impact: Improve access to behavioral health, substance use disorder treatments, and implementation of navigation services.

## **Performance in the priority area continued**

Performance across all of the following priority areas.

### **Effective treatment**

At Dignity Health French Hospital Medical Center (FHMC), our mission is to provide high quality compassionate care for all who seek it. We strive to provide equitable care to every patient, recognizing and proactively mitigating the impact of social determinants of health and systemic biases.

We utilize evidence-based guidelines for chronic and acute diseases. Outcomes of guideline adherence are differentiated by race, ethnicity, language, socioeconomic status, and geographic location to identify and close equity gaps in chronic disease management.

Our Electronic Health Record (EHR) is designed to capture patient-reported demographic data and health-related social needs. Data is integrated into clinical workflows flagging potential barriers to

care. Our team of interpreters, social workers, care coordinators, palliative care, and culturally sensitive nurses, physicians and ancillary care team collaborate to connect our patients in need with community resources and primary care services.

Recognizing healthcare access as a readmission driver, our Transitional Care Team assists high-risk patients post-discharge, offering telehealth or STAAR clinic visits for those lacking timely primary care. We actively recruit primary care providers to our service area and have a family practice residency program with the aim to retain our residence to service our community. Our strategic plan aims to reduce readmission rates below national averages within five years.

Identifying health literacy as another driver, FHMC provides comprehensive, health literacy-best-practice patient education in multiple languages and formats. We employ on site spanish and mixteco interpreters. We provide targeted community programs including chronic disease management, street medicine, food replat programs and community grants.

#### Care coordination

Care Coordination monitors all readmissions to the hospital and documents the reason for readmission. Readmission causes are reported at monthly Readmission Committee meetings and opportunities for improvement are discussed in a multidisciplinary setting and changes implemented. Risk of readmission is reported in the EHR. Based on this risk stratification, Care Coordination engages with the Complex Placement Team (CPT) and Complex Case Managers to address identified barriers to safe and effective discharges. The RN Nurse Navigator reaches out to high risk readmission patients after discharge via a follow-up phone call to discuss the post-acute plan of care, address any patient questions, and resolve issues prior to patients requiring a return visit to the ED/hospital.

All inpatients are assessed by a member of the Care Coordination team for anticipated discharge needs within 1 day of admission. Care Coordination then follows the patient and engages at regular intervals to discuss the ongoing plan of care and changes in discharge needs/plans. These engagements involve the patient and, when appropriate, family, friends, and any decision makers. Translation services are offered and utilized when needed to ensure clear communication and understanding around discharge plans. Social workers address psych-social needs/barriers prior to discharge from the hospital. All discharge plans are tailored to be patient-specific and involve collaboration with patients and their support networks to ensure a smooth transition from the hospital setting.

#### Access to care

The most recent community health needs assessment (CHNA) identified four top priorities, all having an impact on barriers to accessing care. The four priority areas are:

- Culturally sensitive and accepting healthcare trusted by the community.
- Readily available healthcare and navigation assistance in patients' spoken language.
- Unmet vital conditions, including transportation, finances, housing (including the unhoused population), education, the environment, and childcare.
- Access to improved behavioral health, including substance use disorder treatment, and navigation of services with a special emphasis on the unhoused population.

#### FY25 Programs and Services:

The hospital delivered several programs and services to help address identified significant community health needs. These included: Cancer Prevention and Screenings; Cardiovascular Disease and Stroke lectures and screenings; Chronic Disease Self-Management (CDSMP)

workshops; Diabetes Prevention and Management and Diabetes Education Empowerment Program (DEEP). The Perinatal Mood and Anxiety Disorder (PMAD) program which provided mental health support for families and our Street Medicine Outreach program that serves those facing homelessness.

Additionally, there is strong collaboration with our Transition Care Center to create services needed after discharge for the highly vulnerable populations. This might be follow-up with a community health worker, or connection to community resources to help with transportation, food or other vital needs.

With our community grants we funded projects that addressed barriers to access to primary care, behavioral health and oral health in fiscal year 2024.

The Medical Safe Haven program (those impacted by human trafficking) touched the lives of 52 victims of human trafficking and provided over 111 clinical visits to these individuals' physical and mental health needs.

## **Methodology Guidelines**

Did the hospital follow the methodology in the Measures Submission Guide? (Y/N)

Y
