

Hospital Equity Measures Report

General Information

Report Type:	Hospital Equity Measures Report
Year:	2024
Hospital Name:	LOS ANGELES COUNTY OLIVE VIEW-UCLA MEDICAL CENTER
Facility Type:	General Acute Care Hospital
Hospital HCAI ID:	106191231
Report Period:	01/01/2024 - 12/31/2024
Status:	Complete
Due Date:	11/29/2025
Last Updated:	02/05/2026
Hospital Location with Clean Water and Air:	N
Hospital Web Address for Equity Report:	https://lacounty.sharepoint.com/sites/dhs-qrs

Overview

Assembly Bill No. 1204 requires the Department of Health Care Access and Information (HCAI) to develop and administer a Hospital Equity Measures Reporting Program to collect and post summaries of key hospital performance and patient outcome data regarding sociodemographic information, including but not limited to age, sex, race/ethnicity, payor type, language, disability status, and sexual orientation and gender identity.

Hospitals (general acute, children's, and acute psychiatric) and hospital systems are required to annually submit their reports to HCAI. These reports contain summaries of each measure, the top 10 disparities, and the equity plans to address the identified disparities. HCAI is required to maintain a link on the HCAI website that provides access to the content of hospital equity measures reports and equity plans to the public. All submitted hospitals are required to post their reports on their websites, as well.

Laws and Regulations

For more information on Assembly Bill No. 1204, please visit the following link by copying and pasting the URL into your web browser:
https://leginfo.legislature.ca.gov/faces/billTextClient.xhtml?bill_id=202120220AB1204

Hospital Equity Measures

Joint Commission Accreditation

General acute care hospitals are required to report three structural measures based on the Commission Accreditation's Health Care Disparities Reduction and Patient-Centered Communication Accreditation Standards. For more information on these measures, please visit the following link by copying and pasting the URL into your web browser:

The first two structural measures are scored as "yes" or "no"; the third structural measure comprises the percentages of patients by five categories of preferred languages spoken, in addition to one other/unknown language category.

Designate an individual to lead hospital health equity activities (Y = Yes, N = No).

N

Provide documentation of policy prohibiting discrimination (Y = Yes, N = No).

Y

Number of patients that were asked their preferred language, five defined categories and one other/unknown languages category.

73824

Table 1. Summary of preferred languages reported by patients.

Languages	Number of patients who report preferring language	Total number of patients	Percentage of total patients who report preferring language (%)
English Language	33505	73824	45.4
Spanish Language	38209	73824	51.8
Asian Pacific Islander Languages	601	73824	0.8
Middle Eastern Languages	849	73824	1.2
American Sign Language	21	73824	0.0
Other Languages	374	73824	0.5

Centers for Medicare & Medicaid Services (CMS) Hospital Commitment to Health Equity Structural (HCHE) Measure

There are five domains that make up the CMS Hospital Commitment to HCHE measures. Each domain is scored as "yes" or "no." In order to score "yes," a general acute care hospital is required to confirm all the domain's attestations. Lack of one or more of the attestations results in a score of "no." For more information on the CMS Hospital Commitment to HCHE measures, please visit the following link by copying and pasting the URL into your web browser:

https://data.cms.gov/provider-data/topics/hospitals/health-equity

Centers for Medicare & Medicaid Services (CMS) Hospital Commitment to Health Equity Structural (HCHE) Measure Domain 1: Strategic Planning (Yes/No)

- Our hospital strategic plan identifies priority populations who currently experience health disparities.
- Our hospital strategic plan identifies healthcare equity goals and discrete action steps to achieve these goals.
- Our hospital strategic plan outlines specific resources that have been dedicated to achieving our equity goals.
- Our hospital strategic plan describes our approach for engaging key stakeholders, such as community-based organizations.

Y

CMS HCHE Measure Domain 2: Data Collection (Yes/No)

- Our hospital strategic plan identifies healthcare equity goals and discrete action steps to achieve these goals.
- Our hospital has training for staff in culturally sensitive collection of demographics and/or social determinant of health information.
- Our hospital inputs demographic and/or social determinant of health information collected from patients into structured, interoperable data elements using a certified electronic health record (EHR) technology.

Y

CMS HCHE Measure Domain 3: Data Analysis (Yes/No)

- Our hospital stratifies key performance indicators by demographic and/or social determinants of health variables to identify equity gaps and includes this information in hospital performance dashboards.

Y

CMS HCHE Measure Domain 4: Quality Improvement (Yes/No)

- Our hospital participates in local, regional or national quality improvement activities focused on reducing health disparities.

Y

CMS HCHE Measure Domain 5: Leadership Engagement (Yes/No)

- Our hospital senior leadership, including chief executives and the entire hospital board of trustees, annually reviews our strategic plan for achieving health equity.
- Our hospital senior leadership, including chief executives and the entire hospital board of trustees, annually review key performance indicators stratified by demographic and/or social factors.

Y

Centers for Medicare & Medicaid Services (CMS) Social Drivers of Health (SDOH)

General acute care hospitals are required to report on rates of screenings and intervention rates among patients above 18 years old for five health related social needs (HRSN), which are food insecurity, housing instability, transportation problems, utility difficulties, and interpersonal safety. These rates are reported separately as being screened as positive for any of the five HRSNs, positive for each individual HRSN, and the intervention rate for each positively screened HRSN. For more information on the CMS SDOH, please visit the following link by copying and pasting the URL into your web browser:

<https://www.cms.gov/priorities/innovation/key-concepts/social-drivers-health-and-health-related-social-needs>

Number of patients admitted to an inpatient hospital stay who are 18 years or older on the date of admission and are screened for all of the five HRSN

0

Total number of patients who are admitted to a hospital inpatient stay and who are 18 years or older on the date of admission

4171

Rate of patients admitted for an inpatient hospital stay who are 18 years or older on the date of admission, were screened for an HRSN, and who screened positive for one or more of the HRSNs

0

Table 2. Positive screening rates and intervention rates for the five Health Related Social Needs of the Centers of Medicare & Medicaid Services (CMS) Social Drivers of Health (SDOH).

Social Driver of Health	Number of positive screenings	Rate of positive screenings (%)	Number of positive screenings who received intervention	Rate of positive screenings who received intervention (%)
Food Insecurity	0		0	
Housing Instability	94		0	
Transportation Problems	0		0	
Utility Difficulties	0		0	
Interpersonal Safety	0		0	

Core Quality Measures for General Acute Care Hospitals

There are two quality measures from the Hospital Consumer Assessment of Healthcare Providers and Systems (HCAHPS) survey. For more information on the HCAHPS survey, please visit the following link by copying and pasting the URL into your web browser:

<https://hcahpsonline.org/en/survey-instruments/>

Patient Recommends Hospital

The first HCAHPS quality measure is the percentage of patients who would recommend the hospital to friends and family. For this measure, general acute care hospitals provide the percentage of patient respondents who responded "probably yes" or "definitely yes" to whether they would recommend the hospital, the percentage of the people who responded to the survey (i.e., the response rate), and the inputs for the percentages. The percentages and inputs are stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding HCAHPS question number is 19.

Number of respondents who replied "probably yes" or "definitely yes" to HCAHPS Question 19, "Would you recommend this hospital to your friends and family?"

330

Total number of respondents to HCAHPS Question 19

355

Percentage of total respondents who responded "probably yes" or "definitely yes" to HCAHPS Question 19

93.0

Total number of people surveyed on HCAHPS Question 19

3550

Response rate, or the percentage of people who responded to HCAHPS Question 19

10.0

Table 3. Patient recommends hospital by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

Race and/or Ethnicity	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
American Indian or Alaska Native					
Asian					
Black or African American					
Hispanic or Latino					
Middle Eastern or North African					
Multiracial and/or Multiethnic (two or more races)					
Native Hawaiian or Pacific Islander					
White					

Age	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Age < 18					
Age 18 to 34					
Age 35 to 49					
Age 50 to 64					
Age 65 Years and Older					

Sex assigned at birth	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Female					
Male					
Unknown					

Payer Type	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Medicare					
Medicaid					
Private					
Self-Pay					
Other					

Preferred Language	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
English Language					
Spanish Language					
Asian Pacific Islander Languages					
Middle Eastern Languages					
American Sign Language					
Other/Unknown Languages					

Disability Status	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Does not have a disability					
Has a mobility disability					
Has a cognition disability					
Has a hearing disability					
Has a vision disability					
Has a self-care disability					
Has an independent living disability					

Sexual Orientation	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Lesbian, gay or homosexual					
Straight or heterosexual					
Bisexual

Don't know					
Not disclosed					

Gender Identity	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Female					
Female-to-male (FTM)/ transgender male/trans man					
Male					
Male-to-female (MTF)/ transgender female/trans woman					
Non-conforming gender					
Additional gender category or other					
Not disclosed					

Patient Received Information in Writing

The second HCAHPS quality measure is the percentage of patients who reported receiving information in writing on symptoms and health problems to look out for after leaving the hospital. General acute care hospitals are required to provide the percentage of patient respondents who responded "yes" to being provided written information, the percentage of the people who responded to the survey (i.e., the response rate), and the inputs for these percentages. These percentages and inputs are stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding HCAHPS question number is 17.

Number of respondents who replied "yes" to HCAHPS Question 17, "During this hospital stay, did you get information in writing about what symptoms or health problems to look out for after you left the

hospital?"

298

Total number of respondents to HCAHPS Question 17

355

Percentage of respondents who responded "yes" to HCAHPS Question 17

83.9

Total number of people surveyed on HCAHPS Question 17

3550

Response rate, or the percentage of people who responded to HCAHPS Question 17

10.0

Table 4. Patient reports receiving information in writing about symptoms or health problems by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

Race and/or Ethnicity	Number of "yes" responses	Total number of responses	Percentage of "yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)

Agency for Healthcare Research and Quality (AHRQ) Indicators

General acute care hospitals are required to report on two indicators from the Agency for Healthcare Research and Quality (AHRQ). For general information about AHRQ indicators, please visit the following link by copying and pasting the URL into your web browser:
<https://qualityindicators.ahrq.gov/>

Pneumonia Mortality Rate

The Pneumonia Mortality Rate is defined as the rate of in-hospital deaths per 1,000 hospital discharges with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission for patients ages 18 years and older. General acute care hospitals report the Pneumonia Mortality Rate by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding AHRQ Inpatient Quality Indicator is 20. For more information about this indicator, please visit the following link by copying and pasting the URL into your web browser:
https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_20_Pneumonia_Mortality_Rate.pdf

Number of in-hospital deaths with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission
suppressed

Total number of hospital discharges with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission
suppressed

Rate of in-hospital deaths per 1,000 hospital discharges with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission
suppressed

Death Rate among Surgical Inpatients with Serious Treatable Complications

The Death Rate among Surgical Inpatients with Serious Treatable Complications is defined as the rate of in-hospital deaths per 1,000 surgical discharges among patients ages 18-89 years old or obstetric patients with serious treatable complications. General acute care hospitals report this measure by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding AHRQ Patient Safety Indicator is 04. For more information about this indicator, please visit the following link by copying and pasting the URL into your web browser:
https://qualityindicators.ahrq.gov/Downloads/Modules/PSI/V2023/TechSpecs/PSI_04_Death_Rate_among_Surgical_Inpatients_with_Serious_Treatable_Complications.pdf

California Maternal Quality Care Collaborative (CMQCC) Core Quality Measures

There are three core quality maternal measures adopted from the California Maternal Quality Care Collaborative (CMQCC).

CMQCC Nulliparous, Term, Singleton, Vertex (NTSV) Cesarean Birth Rate

The CMQCC Nulliparous, Term, Singleton, Vertex (NTSV) Cesarean Birth Rate is defined as nulliparous women with a term (at least 37 weeks gestation), singleton baby in a vertex position delivered by cesarian birth. General acute care hospitals report the NTSV Cesarean Birth Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. For more information, please visit the following link by copying and pasting the URL into your web browser:

<https://www.cmqcc.org/quality-improvement-toolkits/supporting-vaginal-birth/ntsv-cesarean-birth-measure-specifications>

CMQCC Vaginal Birth After Cesarean (VBAC) Rate

The CMQCC Vaginal Birth After Cesarean (VBAC) Rate is defined as vaginal births per 1,000 deliveries by patients with previous Cesarean deliveries. General acute care hospitals report the VBAC Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The VBAC Rate uses the specifications of AHRQ Inpatient Quality Indicator 22. For more information, please visit the following link by copying and pasting the URL into your web browser:

[https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_22_Vaginal_Birth_After_Cesarean_\(VBAC\)_Delivery_Rate_Uncomplicated.pdf](https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_22_Vaginal_Birth_After_Cesarean_(VBAC)_Delivery_Rate_Uncomplicated.pdf)

CMQCC Exclusive Breast Milk Feeding Rate

The CMQCC Exclusive Breast Milk Feeding Rate is defined as the newborns per 100 who reached at least 37 weeks of gestation (or 3000g if gestational age is missing) who received breast milk

exclusively during their stay at the hospital. Other criteria are that the newborns did not go to the neonatal intensive care unit (NICU), transfer, or die, did not reflect multiple gestation, and did not have codes for parenteral nutrition or galactosemia. General acute care hospitals report the Exclusive Breast Milk Feeding Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The CMQCC Exclusive Breast Milk Feeding Rate uses the Joint Commission National Quality Measure PC-05. For more information, please visit the following link by copying and pasting the URL into your web browser:
<https://manual.jointcommission.org/releases/TJC2024B/MIF0170.html>

Number of newborn cases that were exclusively fed breast milk during their hospital stay and meet the inclusion and exclusion criteria

390

Total number of newborn cases born in the hospital that meet the inclusion and exclusion criteria

657

Rate of newborn cases per 100 that were exclusively fed breast milk during their hospital stay and meet the inclusion and exclusion criteria

HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate

General acute care hospitals are required to report several HCAI All-Cause Unplanned 30-Day Hospital Readmission Rates, which are broadly defined as the percentage of hospital-level, unplanned, all-cause readmissions after admission for eligible conditions within 30 days of hospital discharge for patients aged 18 years and older. These rates are first stratified based on any eligible condition, mental health disorders, substance use disorders, co-occurring disorders, and no behavioral health diagnosis. Then, each condition-stratified hospital readmission rate is further stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. For more information on the HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate, please visit the following link by copying and pasting the URL into your web browser:

https://hcai.ca.gov/wp-content/uploads/2024/10/HCAI-All-Cause-Readmission-Rate-Exclusions_ADA.pdf

HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate – Any Eligible Condition

Number of inpatient hospital admissions which occurs within 30 days of the discharge date of an eligible index admission and were 18 years or older at time of admission

744

Total number of patients who were admitted to the general acute care hospital and were 18 years or older at time of admission

4722

Rate of hospital-level, unplanned, all-cause readmissions after admission for any eligible condition

within 30 days of hospital discharge for patients aged 18 and older

15.8

Table 10. HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate for any eligible condition by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

Health Equity Plan

All general acute care hospitals report a health equity plan that identifies the top 10 disparities and a written plan to address them.

Top 10 Disparities

Disparities for each hospital equity measure are identified by comparing the rate ratios by stratification groups. Rate ratios are calculated differently for measures with preferred low rates and those with preferred high rates. Rate ratios are calculated after applying the California Health and Human Services Agency's "Data De-Identification Guidelines (DDG)," dated September 23, 2016.

Table 15. Top 10 disparities and their rate ratio values.

Measures	Stratifications	Stratification Group	Stratification Rate	Reference Group	Reference Rate	Rate Ratio
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Age (excluding maternal measures)	65 and older	18.2	18 to 34	10.1	1.8
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Age (excluding maternal measures)	35 to 49	17.5	18 to 34	10.1	1.7
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Age (excluding maternal measures)	50 to 64	16.4	18 to 34	10.1	1.6
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Expected Payor	Medicare	19.2	Private	12.2	1.6
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate, stratified by behavioral health diagnosis (No Behavioral Health Diagnosis)	Sex Assigned at Birth	Male	15.2	Female	11.4	1.3
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Expected Payor	Medicaid	15.8	Private	12.2	1.3
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Race and/or Ethnicity	Black or African American	18.6	Hispanic or Latino	15.9	1.2
CMQCC Exclusive Breast Milk Feeding	Age (for maternal measures only)	30 to 39	55.5	18 to 29	64.0	1.2
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Race and/or Ethnicity	Black or African American	18.6	Hispanic or Latino	15.9	1.1
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Race and/or Ethnicity	Asian	16.8	Hispanic or Latino	15.9	1.0

Plan to address disparities identified in the data

Of the top 10 disparities we identified in our preliminary report, 9 are readmissions disparities and 4 are linked directly with age. Older patients are more likely to be readmitted compared to the 18-34 age group. Although we never expect the readmission rate of our geriatric populations to be equal to that of our 18-34 group, in 2026 we are working towards becoming an age-friendly hospital, which involves multiple interventions in the IHI "5Ms" framework to improve care for older adults, including improving the medication reconciliation process, documenting goals of care and ensuring discharge instructions and follow up plans are clear. As we implement these interventions, we plan to measure numerous quality markers including 7 and 30-day readmissions to see if our rates decline.

When we break readmissions along race and ethnicity lines, we see that Asian, White and Black patients are all more likely to be readmitted compared to Hispanic or Latino patients. We plan to do additional investigation about why this disparity exists. In the past, we have found that because the majority of our admitted patients identify as Latino, rates of various quality measures in other groups have significant variation due to a small sample size. By performing a qualitative review of the reasons for readmission in these minority groups we hope to gain some insight about the root causes of these higher readmission rates.

Finally, there is a disparity in readmissions between Medicaid patients and patients with private insurance. As a patient-centered medical home that primarily serves patients on Medicaid, we know that our patients face numerous social drivers of health that can lead to readmission. We also know that privately insured patients are less likely to return to our hospital after an incident admission,

since they are not typically a part of our health system, so their readmissions may simply not be captured in our data. We already have numerous programs dedicated to preventing readmission in our Medicaid patients, including: the Next Day and Urgent Care clinics which provide same day access to patients with urgent needs after discharge, a transition-of-care pharmacist that reviews high complexity patients to the discharge medication plan is followed, same-week access to the patient's own primary care physician and RN care managers that follow patients with multiple hospitalizations. We will continue to improve these programs to address this disparity.

The only disparity identified in our top 10 outside of the readmissions rates was the exclusive breast milk feeding measure, which was lower in patients in the 30-39 year old range compared to patients in the 18-29 year old range. Again, this may be due to relatively small numbers of patients in each of these groups, but in 2026 we plan to trend this data carefully and work with our award-winning Obstetrics and Lactation team to ensure patients have access to the support they need to breastfeed when possible.

Performance in the priority area

General acute care hospitals are required to provide hospital equity plans that address the top 10 disparities by identifying population impact and providing measurable objectives and specific timeframes. For each disparity, hospital equity plans will address performance across priority areas: person-centered care, patient safety, addressing patient social drivers of health, effective treatment, care coordination, and access to care.

Person-centered care

OVMC is working to improve our performance in the area of Person-Centered Care. We recently re-established a Patient and Family Advisory Council to elevate the patient voice in our improvement efforts. In the past 3 years, our HCAHPS and MPS patient experience scores have improved as a result of numerous efforts, including a project to improve quietness at night in the hospital, a concerted effort to reduce pharmacy wait times and extra supervision by our environmental services team to address patient needs in real-time. In 2026, we will continue these important efforts and focus on new initiatives, such as a Wayfinding project to make navigating our health center easier for patients and their families.

Patient safety

Over the past 3 years, OVMC has shown marked improvement in numerous patient safety metrics. Our hospital acquired infection rates (including CAUTI, CLABSI, CDiff and MRSA) have all decreased by more than 10%, and patient safety indicators have decreased by 40%. This improvement is reflected in our Leapfrog grade which has also improved.

Beyond metrics, our team has worked to grow a culture of safety at OVMC. Over 2,000 staff members completed the TeamSTEPPS communication training and more than 30 new peer counselors were trained as a part of the Helping Healers Heal program. Our safety incident reporting system is widely used by staff to report safety issues which are regularly reviewed by our patient safety and risk teams. High risk incidents are reviewed using the new IHI RCA-squared approach, which has led to multiple changes to our policies and practices over the course of the past year that will prevent safety events in the future. Numerous committees, including our code blue committee, peer review committees and medication safety committee meet regularly to review and implement improvement plans.

In 2026, we plan to continue to work towards becoming a high-reliability organization and reducing patient harm. We'll expand our TeamSTEPPS and H3 training, continue our critical committee work, and work on ways to bring our hospital complication rates even lower than they were in 2025.

Addressing patient social drivers of health

The mission of our safety-net hospital is to serve patients who cannot access care in other areas. As a result, almost all patients that seek care at OVMC face multiple social drivers of health that negatively impact their health. For decades, our health care team, and in particular our social work team, has been developing and delivering resources to our patients to address these needs, from connecting patients with food insecurity to EBT programs to assisting with legal resources to arranging housing. While this is no doubt an area of strength for our hospital, our population has a tremendous and overwhelming number of needs, and the resources that exist in the community and at our health center are often not sufficient to meet that need. In 2026 we plan to implement a new screening tool that is embedded in our EHR and should improve our performance on the CMS SDOH metrics listed below. This tool prompts users (including RNs, providers and social workers) with multiple evidence-based screening questions to ensure that all of our patient's needs are identified and addressed. The tool also allows us to collect better data on the percentages of patients that are screened and some of the interventions that are offered. Leveraging the data that comes from this new system will help us identify new opportunities to address social drivers of health in our patients and advocate for the resources they need to improve their health.

Performance in the priority area continued

Performance across all of the following priority areas.

Effective treatment

At OVMC, every member of our health care team works to deliver evidence-based effective care. One of the best demonstrations of this is our performance on the statewide Quality Incentive Pool Program, which follows over 50 different measures of effective care and requires health systems to improve each year relative to past performance. In 2025, we predict that we will exceed our benchmarks in all 20 priority measures, which include metrics like breast cancer screening, hypertension control and STI screening. There are more than 10 measures where we are exceeding our benchmarks by more than 10%.

Care coordination

Our hospital supports strong care coordination through a comprehensive, team-based approach. Nurse care coordinators are assigned to high-risk patients to guide them through their hospital stay and ensure that individualized care plans are in place. After discharge, our Transition of Care pharmacist reviews high-risk cases to confirm patients understand their medications and have timely access to them. We also provide expedited scheduling for both specialty and primary care follow-up appointments to support a safe transition home. For inpatients with complex needs, multidisciplinary rounds bring together nursing, physicians, social work, pharmacy, and other key team members to proactively address barriers and coordinate a smooth, well-supported discharge. In addition, for all patients who receive primary care at our center, we review a monthly report of admissions to outside hospitals and proactively reach out to ensure they receive prompt follow-up care. We also run ongoing reports to identify patients who are due for blood work, screening exams, or other key follow-up needs, and our team contacts them directly to help them get the recommended care in a timely manner.

Access to care

Access to care in the right place and the right time is a central priority in the Department of Health Services, and Olive View is no exception. There are numerous settings where patients can access care, from primary care practices which offer next-day appointments to urgent care, which offers after hours visits to Next Day clinic, which provides highly complex ambulatory care designed to prevent hospital admissions. Of course, our Psychiatric, Pediatric and Adult Emergency room offers 24/7 care to anyone who needs it. When our patients need outpatient specialty care, our data shows that more than 95% of patients are scheduled on-time according to our specialist reviewers who review every referral. Imaging, pharmacy and laboratory services are available on-site, often with after-hours options. In 2026, we plan to work on improving our access via more timely phone and texting services for outpatients and expanding our echocardiogram and CT scanning capacity to meet demand and reduce wait times.

Methodology Guidelines

Did the hospital follow the methodology in the Measures Submission Guide? (Y/N)
