

Hospital Equity Measures Report

General Information

Report Type:	Hospital Equity Measures Report
Year:	2024
Hospital Name:	UCSF MEDICAL CENTER
Facility Type:	General Acute Care Hospital
Hospital HCAI ID:	106381154
Report Period:	1/1/2024 - 12/31/2024
Status:	Complete
Due Date:	11/29/2025
Last Updated:	01/17/2026
Hospital Location with Clean Water and Air:	Y
Hospital Web Address for Equity Report:	https://www.ucsfhealth.org/

Overview

Assembly Bill No. 1204 requires the Department of Health Care Access and Information (HCAI) to develop and administer a Hospital Equity Measures Reporting Program to collect and post summaries of key hospital performance and patient outcome data regarding sociodemographic information, including but not limited to age, sex, race/ethnicity, payor type, language, disability status, and sexual orientation and gender identity.

Hospitals (general acute, children's, and acute psychiatric) and hospital systems are required to annually submit their reports to HCAI. These reports contain summaries of each measure, the top 10 disparities, and the equity plans to address the identified disparities. HCAI is required to maintain a link on the HCAI website that provides access to the content of hospital equity measures reports and equity plans to the public. All submitted hospitals are required to post their reports on their websites, as well.

Laws and Regulations

For more information on Assembly Bill No. 1204, please visit the following link by copying and pasting the URL into your web browser:

https://leginfo.legislature.ca.gov/faces/billTextClient.xhtml?bill_id=202120220AB1204

Hospital Equity Measures

Joint Commission Accreditation

General acute care hospitals are required to report three structural measures based on the Commission Accreditation's Health Care Disparities Reduction and Patient-Centered Communication Accreditation Standards. For more information on these measures, please visit the following link by copying and pasting the URL into your web browser:

<https://www.jointcommission.org/standards/r3-report/r3-report-issue-36-new-requirements-to-reduce>

-health-care-disparities/

The first two structural measures are scored as "yes" or "no"; the third structural measure comprises the percentages of patients by five categories of preferred languages spoken, in addition to one other/ unknown language category.

Designate an individual to lead hospital health equity activities (Y = Yes, N = No).

Y

Provide documentation of policy prohibiting discrimination (Y = Yes, N = No).

Y

Number of patients that were asked their preferred language, five defined categories and one other/ unknown languages category.

137352

Table 1. Summary of preferred languages reported by patients.

Languages	Number of patients who report preferring language	Total number of patients	Percentage of total patients who report preferring language (%)
English Language	120810	137352	88
Spanish Language	7909	137352	5.8
Asian Pacific Islander Languages	6072	137352	4.4
Middle Eastern Languages	641	137352	0.5
American Sign Language	92	137352	0.1
Other Languages	1828	137352	1.3

Centers for Medicare & Medicaid Services (CMS) Hospital Commitment to Health Equity Structural (HCHE) Measure

There are five domains that make up the CMS Hospital Commitment to HCHE measures. Each domain is scored as "yes" or "no." In order to score "yes," a general acute care hospital is required to confirm all the domain's attestations. Lack of one or more of the attestations results in a score of "no." For more information on the CMS Hospital Commitment to HCHE measures, please visit the following link by copying and pasting the URL into your web browser:

<https://data.cms.gov/provider-data/topics/hospitals/health-equity>

Centers for Medicare & Medicaid Services (CMS) Hospital Commitment to Health Equity Structural (HCHE) Measure Domain 1: Strategic Planning (Yes/No)

- Our hospital strategic plan identifies priority populations who currently experience health disparities.
- Our hospital strategic plan identifies healthcare equity goals and discrete action steps to achieve these goals.
- Our hospital strategic plan outlines specific resources that have been dedicated to achieving our equity goals.
- Our hospital strategic plan describes our approach for engaging key stakeholders, such as community-based organizations.

Y

CMS HCHE Measure Domain 2: Data Collection (Yes/No)

- Our hospital strategic plan identifies healthcare equity goals and discrete action steps to achieve these goals.

- Our hospital has training for staff in culturally sensitive collection of demographics and/or social determinant of health information.
- Our hospital inputs demographic and/or social determinant of health information collected from patients into structured, interoperable data elements using a certified electronic health record (EHR) technology.

Y

CMS HCHE Measure Domain 3: Data Analysis (Yes/No)

- Our hospital stratifies key performance indicators by demographic and/or social determinants of health variables to identify equity gaps and includes this information in hospital performance dashboards.

Y

CMS HCHE Measure Domain 4: Quality Improvement (Yes/No)

- Our hospital participates in local, regional or national quality improvement activities focused on reducing health disparities.

Y

CMS HCHE Measure Domain 5: Leadership Engagement (Yes/No)

- Our hospital senior leadership, including chief executives and the entire hospital board of trustees, annually reviews our strategic plan for achieving health equity.
- Our hospital senior leadership, including chief executives and the entire hospital board of trustees, annually review key performance indicators stratified by demographic and/or social factors.

Y

Centers for Medicare & Medicaid Services (CMS) Social Drivers of Health (SDOH)

General acute care hospitals are required to report on rates of screenings and intervention rates among patients above 18 years old for five health related social needs (HRSN), which are food insecurity, housing instability, transportation problems, utility difficulties, and interpersonal safety. These rates are reported separately as being screened as positive for any of the five HRSNs, positive for each individual HRSN, and the intervention rate for each positively screened HRSN. For more information on the CMS SDOH, please visit the following link by copying and pasting the URL into your web browser:

<https://www.cms.gov/priorities/innovation/key-concepts/social-drivers-health-and-health-related-social-needs>

Number of patients admitted to an inpatient hospital stay who are 18 years or older on the date of admission and are screened for all of the five HRSN

1915

Total number of patients who are admitted to a hospital inpatient stay and who are 18 years or older on the date of admission

23759

Rate of patients admitted for an inpatient hospital stay who are 18 years or older on the date of admission, were screened for an HRSN, and who screened positive for one or more of the HRSNs

35

Table 2. Positive screening rates and intervention rates for the five Health Related Social Needs of the Centers of Medicare & Medicaid Services (CMS) Social Drivers of Health (SDOH).

Social Driver of Health	Number of positive screenings	Rate of positive screenings (%)	Number of positive screenings who received intervention	Rate of positive screenings who received intervention (%)
Food Insecurity	267	10.7	0	
Housing Instability	201	9.9	0	
Transportation Problems	220	9	0	
Utility Difficulties	69	3.6	0	
Interpersonal Safety	229	1	0	

Core Quality Measures for General Acute Care Hospitals

There are two quality measures from the Hospital Consumer Assessment of Healthcare Providers and Systems (HCAHPS) survey. For more information on the HCAHPS survey, please visit the following link by copying and pasting the URL into your web browser:

<https://hcahpsonline.org/en/survey-instruments/>

Patient Recommends Hospital

The first HCAHPS quality measure is the percentage of patients who would recommend the hospital to friends and family. For this measure, general acute care hospitals provide the percentage of patient respondents who responded "probably yes" or "definitely yes" to whether they would recommend the hospital, the percentage of the people who responded to the survey (i.e., the response rate), and the inputs for the percentages. The percentages and inputs are stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding HCAHPS question number is 19.

Number of respondents who replied "probably yes" or "definitely yes" to HCAHPS Question 19, "Would you recommend this hospital to your friends and family?"

618

Total number of respondents to HCAHPS Question 19

637

Percentage of total respondents who responded "probably yes" or "definitely yes" to HCAHPS Question 19

97

Total number of people surveyed on HCAHPS Question 19

3353

Response rate, or the percentage of people who responded to HCAHPS Question 19

19

Table 3. Patient recommends hospital by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

Race and/or Ethnicity	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
American Indian or Alaska Native					
Asian					
Black or African American					
Hispanic or Latino					
Middle Eastern or North African					
Multiracial and/or Multiethnic (two or more races)					
Native Hawaiian or Pacific Islander					
White					

Age	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Age < 18					
Age 18 to 34					
Age 35 to 49					
Age 50 to 64					
Age 65 Years and Older					

Sex assigned at birth	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Female					
Male					
Unknown					

Payer Type	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Medicare					
Medicaid					
Private					
Self-Pay					
Other					

Preferred Language	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
English Language					
Spanish Language					
Asian Pacific Islander Languages					
Middle Eastern Languages					
American Sign Language

Female-to-male (FTM)/ transgender male/trans man					
Male					
Male-to-female (MTF)/ transgender female/trans woman					
Non-conforming gender					
Additional gender category or other					
Not disclosed					

Patient Received Information in Writing

The second HCAHPS quality measure is the percentage of patients who reported receiving information in writing on symptoms and health problems to look out for after leaving the hospital. General acute care hospitals are required to provide the percentage of patient respondents who responded "yes" to being provided written information, the percentage of the people who responded to the survey (i.e., the response rate), and the inputs for these percentages. These percentages and inputs are stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding HCAHPS question number is 17.

Number of respondents who replied "yes" to HCAHPS Question 17, "During this hospital stay, did you get information in writing about what symptoms or health problems to look out for after you left the

hospital?"

567
Total number of respondents to HCAHPS Question 17
637

Percentage of respondents who responded "yes" to HCAHPS Question 17
89

Total number of people surveyed on HCAHPS Question 17
3353

Response rate, or the percentage of people who responded to HCAHPS Question 17
19

Table 4. Patient reports receiving information in writing about symptoms or health problems by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

Race and/or Ethnicity	Number of "yes" responses	Total number of responses	Percentage of "yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)

Agency for Healthcare Research and Quality (AHRQ) Indicators

General acute care hospitals are required to report on two indicators from the Agency for Healthcare Research and Quality (AHRQ). For general information about AHRQ indicators, please visit the following link by copying and pasting the URL into your web browser:

<https://qualityindicators.ahrq.gov/>

Pneumonia Mortality Rate

The Pneumonia Mortality Rate is defined as the rate of in-hospital deaths per 1,000 hospital discharges with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission for patients ages 18 years and older. General acute care hospitals report the Pneumonia Mortality Rate by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding AHRQ Inpatient Quality Indicator is 20. For more information about this indicator, please visit the following link by copying and pasting the URL into your web browser:

https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_20_Pneumonia_Mortality_Rate.pdf

Number of in-hospital deaths with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission

59

Total number of hospital discharges with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission

691

Rate of in-hospital deaths per 1,000 hospital discharges with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission

85.4

Death Rate among Surgical Inpatients with Serious Treatable Complications

The Death Rate among Surgical Inpatients with Serious Treatable Complications is defined as the rate of in-hospital deaths per 1,000 surgical discharges among patients ages 18-89 years old or obstetric patients with serious treatable complications. General acute care hospitals report this measure by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding AHRQ Patient Safety Indicator is 04. For more information about this indicator, please visit the following link by copying and pasting the URL into your web browser:

California Maternal Quality Care Collaborative (CMQCC) Core Quality Measures

There are three core quality maternal measures adopted from the California Maternal Quality Care Collaborative (CMQCC).

CMQCC Nulliparous, Term, Singleton, Vertex (NTSV) Cesarean Birth Rate

The CMQCC Nulliparous, Term, Singleton, Vertex (NTSV) Cesarean Birth Rate is defined as nulliparous women with a term (at least 37 weeks gestation), singleton baby in a vertex position delivered by cesarian birth. General acute care hospitals report the NTSV Cesarean Birth Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. For more information, please visit the following link by copying and pasting the URL into your web browser:

<https://www.cmqcc.org/quality-improvement-toolkits/supporting-vaginal-birth/ntsv-cesarean-birth-measure-specifications>

CMQCC Vaginal Birth After Cesarean (VBAC) Rate

The CMQCC Vaginal Birth After Cesarean (VBAC) Rate is defined as vaginal births per 1,000 deliveries by patients with previous Cesarean deliveries. General acute care hospitals report the VBAC Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The VBAC Rate uses the specifications of AHRQ Inpatient Quality Indicator 22. For more information, please visit the following link by copying and pasting the URL into your web browser:

[https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_22_Vaginal_Birth_After_Cesarean_\(VBAC\)_Delivery_Rate_Uncomplicated.pdf](https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_22_Vaginal_Birth_After_Cesarean_(VBAC)_Delivery_Rate_Uncomplicated.pdf)

Number of vaginal delivery among cases with previous Cesarean delivery that meet the inclusion and exclusion criteria

72

CMQCC Exclusive Breast Milk Feeding Rate

The CMQCC Exclusive Breast Milk Feeding Rate is defined as the newborns per 100 who reached at least 37 weeks of gestation (or 3000g if gestational age is missing) who received breast milk

exclusively during their stay at the hospital. Other criteria are that the newborns did not go to the neonatal intensive care unit (NICU), transfer, or die, did not reflect multiple gestation, and did not have codes for parenteral nutrition or galactosemia. General acute care hospitals report the Exclusive Breast Milk Feeding Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The CMQCC Exclusive Breast Milk Feeding Rate uses the Joint Commission National Quality Measure PC-05. For more information, please visit the following link by copying and pasting the URL into your web browser: <https://manual.jointcommission.org/releases/TJC2024B/MIF0170.html>

Number of newborn cases that were exclusively fed breast milk during their hospital stay and meet the inclusion and exclusion criteria

NA

Total number of newborn cases born in the hospital that meet the inclusion and exclusion criteria

NA

Rate of newborn cases per 100 that were exclusively fed breast milk during their hospital stay and meet the inclusion and exclusion criteria

HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate

General acute care hospitals are required to report several HCAI All-Cause Unplanned 30-Day Hospital Readmission Rates, which are broadly defined as the percentage of hospital-level, unplanned, all-cause readmissions after admission for eligible conditions within 30 days of hospital discharge for patients aged 18 years and older. These rates are first stratified based on any eligible condition, mental health disorders, substance use disorders, co-occurring disorders, and no behavioral health diagnosis. Then, each condition-stratified hospital readmission rate is further stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. For more information on the HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate, please visit the following link by copying and pasting the URL into your web browser:

https://hcai.ca.gov/wp-content/uploads/2024/10/HCAI-All-Cause-Readmission-Rate-Exclusions_ADA.pdf

HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate – Any Eligible Condition

Number of inpatient hospital admissions which occurs within 30 days of the discharge date of an eligible index admission and were 18 years or older at time of admission

2648

Total number of patients who were admitted to the general acute care hospital and were 18 years or older at time of admission

16542

Rate of hospital-level, unplanned, all-cause readmissions after admission for any eligible condition

within 30 days of hospital discharge for patients aged 18 and older

16

Table 10. HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate for any eligible condition by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

Race and/or Ethnicity	Number of inpatient readmissions	Total number of admitted patients	Readmission rate (%)
American Indian or Alaska Native	16	91	17.6
Asian	484	3080	15.7
Black or African American	378	1801	21
Hispanic or Latino	495	2757	18

Health Equity Plan

All general acute care hospitals report a health equity plan that identifies the top 10 disparities and a written plan to address them.

Top 10 Disparities

Disparities for each hospital equity measure are identified by comparing the rate ratios by stratification groups. Rate ratios are calculated differently for measures with preferred low rates and those with preferred high rates. Rate ratios are calculated after applying the California Health and Human Services Agency's "Data De-Identification Guidelines (DDG)," dated September 23, 2016.

Table 15. Top 10 disparities and their rate ratio values.

Measures	Stratifications	Stratification Group	Stratification Rate	Reference Group	Reference Rate	Rate Ratio
Agency for Healthcare Research and Quality (AHRQ) Quality Indicator Pneumonia Mortality Rate	Race and/or Ethnicity	Black or African American	162.6	White	67.6	4.8
AHRQ Patient Safety Indicator Death Rate among Surgical Inpatients with Serious Treatable Complications	Age (excluding maternal measures)	65 and older	175.5	50 to 64	87.7	2
Agency for Healthcare Research and Quality (AHRQ) Quality Indicator Pneumonia Mortality Rate	Expected Payor	Private	154.6	Medicare	83.9	1.8
AHRQ Patient Safety Indicator Death Rate among Surgical Inpatients with Serious Treatable Complications	Race and/or Ethnicity	Asian	174.4	White	95.9	1.8
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Expected Payor	Medicaid	19.5	Private	12.9	1.5
AHRQ Patient Safety Indicator Death Rate among Surgical Inpatients with Serious Treatable Complications	Expected Payor	Private	153.3	Medicaid	104.3	1.5
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Race and/or Ethnicity	Black or African American	21	White	14.4	1.5
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Race and/or Ethnicity	Native Hawaiian or Pacific Islander	19.3	White	14.4	1.3
Agency for Healthcare Research and Quality (AHRQ) Quality Indicator Pneumonia Mortality Rate	Age (excluding maternal measures)	65 and older	119	65 and older	89.5	1.3
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Preferred Language	Spanish Language	20.5	English Language	15.5	1.3

Plan to address disparities identified in the data

1. UCSF Health will implement a coordinated set of interventions to reduce 30-day All-Cause readmission by combining enhanced care transition outreach programs and various ways to stratify patients. The Care Transition Outreach Program (CTOP) team will conduct timely post-discharge outreach which includes:

- a. An automated call is sent to patients within 3 days of discharge home
- b. Patients who identify a concern receive a call from a CTOP nurse to provide symptom triage, teaching, and care coordination
- c. For certain "at-risk" patients who fail to answer the automated call, a nurse screens and manually calls those who have not already been contacted by another clinician.
- d. A Social Worker addresses psychosocial needs and links patients with community resources, and pharmacists address medication access and questions
- e. CTOP escalates patient concerns to Patient Relations to facilitate rapid service recovery
- f. CTOP added text messaging for patients not reached by automated call and added health equity component to manual outreach

2. The AI projects

- a. 30-day Readmission AI risk prediction model: piloting in 2 OPH programs, working with ESTAR fellow
- b. AI-drafted discharge summaries: pilot
- c. AI-drafted discharge instructions: pilot

3. Improve ambulatory access post-discharge

- a. Standardized transitions workflows and improving post discharge access: collaborating with ambulatory leadership
- b. Survey to all case managers and service line directors
- c. Epic build of discharge order
- d. Transition Care Management: piloted at our Lakeshore clinic, expanded to all primary care clinics
- e. Onclick: 30-day longitudinal post-discharge support for Medicare FFS patients live-reduction in readmission rate

Performance in the priority area

General acute care hospitals are required to provide hospital equity plans that address the top 10 disparities by identifying population impact and providing measurable objectives and specific timeframes. For each disparity, hospital equity plans will address performance across priority areas: person-centered care, patient safety, addressing patient social drivers of health, effective treatment, care coordination, and access to care.

Person-centered care

UCSF Health demonstrates strong performance in the domain of person-centered care, as evidenced by top-tier benchmark rankings, and an institutional infrastructure devoted to person-centered and equity-oriented care. We integrate the whole person's support, language interpreter services, spiritual care, social work, and track patient experience systematically.

U.S. News & World Report 2024-25 survey ranked UCSF Medical Center (UCSFMC) the best in California (tied No.1) and No. 3 nationwide in neurology/neurosurgery and geriatric care. UCSFMC ranked among the nation's top 10 hospitals in seven areas: cancer, geriatrics, neurology and neurosurgery, orthopedics, psychiatry, pulmonology and rheumatology.

Patient safety

UCSF performance in Patient Safety is recognized by receiving honors for quality and safety for our commitment to protecting patients earned UCSF Health an "A" in patient safety from the Leapfrog Group for at Parnassus, Mission Bay and St. Mary's. Leapfrog also recognized Parnassus, Mission Bay and Mount Zion as "top hospitals". UCSF also received 5 out of 5 stars for quality, safety and patient experience from Centers for Medicare & Medicaid Services.

Addressing patient social drivers of health

Currently UCSF Health screens for SDOH domains, the SDOH domains display in the EHR in various places and if a patient screens, positive clinical pathways are initiated to Social Workers. The full electronic implementation went live on October 4, 2025, with a full system upgrade and incorporation of our new hospitals Hyde & Stanyan (formerly St. Mary's and St. Francis hospitals). The SDOH project team has implemented a SDOH screening dashboard to track screening rates across the various facilities and departments within UCSF. We also launched a training module in

our UC Learning system to educate on workflows and best practices.

Performance in the priority area continued

Performance across all of the following priority areas.

Effective treatment

Enterprise True North Disparity Improvement efforts identified as priorities for UCSF Health in FY25. These efforts focus on key areas including Maternal Health, Language Access, Hypertension Control, and MyChart Access.

UCSF Health has pinpointed these critical areas for disparity improvement to be featured on the Tier 5, Enterprise True North. These priorities are essential for advancing healthcare equity, which encompasses patients' access to care, their experience of care, and clinical outcomes. The prioritization of these efforts is spearheaded by the Health Equity Division, with endorsement from UCSF Health's Health Equity Council and the Department of Quality and Safety leadership. Many of these initiatives extend over multiple years to address the systemic changes necessary to mitigate long-standing healthcare disparities.

Care coordination

At UCSF Health, our experienced and sensitive Case Management and Social Work team is available to help patients and families cope with the many psychological and social problems that may arise during illness, hospitalization, and medical treatment. Our social workers act as patient advocates by serving as counselors, helping to find resources and solve problems. When it's medically necessary, social workers also help arrange alternate types of care when patients leave the hospital, which may include rehabilitation facilities, skilled nursing facilities, hospice or board and care homes. Any concerns related to the psychological, practical or social well-being of patients and their loved ones may be discussed openly with our social workers.

Access to care

UCSF Health continues to advance access to care by expanding capacity, improving operational efficiency, and leveraging digital innovation to bring services closer to patients. Over the past year, UCSF has increased appointment availability through targeted throughput initiatives, including enhanced provider scheduling templates, virtual-first pathways, and expanded hours in high-demand specialties. Investment in centralized access systems such as streamlined referral workflows, real-time scheduling visibility and automated patient outreach has reduced appointment lead times and improved first-available access. Additionally, telehealth utilization remains one of the highest in California academic health systems, supporting timely access for low-income and mobility-limited populations.

Effective August 2024, UCSF Health Saint Francis Memorial Hospital, UCSF Health St. Mary's Medical Center and associated outpatient clinics joined UCSF Health. UCSF Health will maintain existing services at the longstanding San Francisco hospitals, ensuring patients will be able to continue seeing their current providers and keep care local. Having more places to offer primary and secondary care will also increase UCSF Health's ability to care for patients with complex medical needs. Combining community care with academic medicine makes convenient, comprehensive care easier to access for all our patients.

UCSF is also strengthening equity in access through community partnership clinics, interpreter and language access expansion and focused efforts to improve access for Medi-Cal, Medicare

Advantage, and underinsured patients. Population Health teams collaborate with primary care, specialty care and Care at Home programs to prioritize timely access for high-risked patients. Ongoing work to reduce no-shows, shorten cycle times and improve coordination between inpatient and outpatient settings has contributed to more seamless care transitions. Together these improvements reflect UCSF's commitment to accessible, patient-centered, and equity-driven care for all communities it serves.

Methodology Guidelines

Did the hospital follow the methodology in the Measures Submission Guide? (Y/N)
