

# Hospital Equity Measures Report

## General Information

Report Type:	Hospital Equity Measures Report
Year:	2024
Hospital Name:	KAISER FOUNDATION HOSPITAL - SAN FRANCISCO
Facility Type:	General Acute Care Hospital
Hospital HCAI ID:	106380857
Report Period:	01/01/2024 - 12/31/2024
Status:	Complete
Due Date:	11/29/2025
Last Updated:	02/20/2026
Hospital Location with Clean Water and Air:	Y
Hospital Web Address for Equity Report:	<a href="https://tinyurl.com/KFH-SFO">https://tinyurl.com/KFH-SFO</a>

## Overview

Assembly Bill No. 1204 requires the Department of Health Care Access and Information (HCAI) to develop and administer a Hospital Equity Measures Reporting Program to collect and post summaries of key hospital performance and patient outcome data regarding sociodemographic information, including but not limited to age, sex, race/ethnicity, payor type, language, disability status, and sexual orientation and gender identity.

Hospitals (general acute, children's, and acute psychiatric) and hospital systems are required to annually submit their reports to HCAI. These reports contain summaries of each measure, the top 10 disparities, and the equity plans to address the identified disparities. HCAI is required to maintain a link on the HCAI website that provides access to the content of hospital equity measures reports and equity plans to the public. All submitted hospitals are required to post their reports on their websites, as well.

## Laws and Regulations

For more information on Assembly Bill No. 1204, please visit the following link by copying and pasting the URL into your web browser:

[https://leginfo.legislature.ca.gov/faces/billTextClient.xhtml?bill\\_id=202120220AB1204](https://leginfo.legislature.ca.gov/faces/billTextClient.xhtml?bill_id=202120220AB1204)

## Hospital Equity Measures

### Joint Commission Accreditation

General acute care hospitals are required to report three structural measures based on the Commission Accreditation's Health Care Disparities Reduction and Patient-Centered Communication Accreditation Standards. For more information on these measures, please visit the following link by copying and pasting the URL into your web browser:

<https://www.jointcommission.org/standards/r3-report/r3-report-issue-36-new-requirements-to-reduce>

-health-care-disparities/

The first two structural measures are scored as "yes" or "no"; the third structural measure comprises the percentages of patients by five categories of preferred languages spoken, in addition to one other/ unknown language category.

Designate an individual to lead hospital health equity activities (Y = Yes, N = No).

Y

Provide documentation of policy prohibiting discrimination (Y = Yes, N = No).

Y

Number of patients that were asked their preferred language, five defined categories and one other/ unknown languages category.

62834

Table 1. Summary of preferred languages reported by patients.

Languages	Number of patients who report preferring language	Total number of patients	Percentage of total patients who report preferring language (%)
English Language	53382	62834	85.0
Spanish Language	3847	62834	6.1
Asian Pacific Islander Languages	4643	62834	7.4
Middle Eastern Languages	353	62834	0.6
American Sign Language	32	62834	0.1
Other Languages	577	62834	0.9

**Centers for Medicare & Medicaid Services (CMS) Hospital Commitment to Health Equity Structural (HCHE) Measure**

There are five domains that make up the CMS Hospital Commitment to HCHE measures. Each domain is scored as "yes" or "no." In order to score "yes," a general acute care hospital is required to confirm all the domain's attestations. Lack of one or more of the attestations results in a score of "no." For more information on the CMS Hospital Commitment to HCHE measures, please visit the following link by copying and pasting the URL into your web browser:

<https://data.cms.gov/provider-data/topics/hospitals/health-equity>

**Centers for Medicare & Medicaid Services (CMS) Hospital Commitment to Health Equity Structural (HCHE) Measure Domain 1: Strategic Planning (Yes/No)**

- Our hospital strategic plan identifies priority populations who currently experience health disparities.
- Our hospital strategic plan identifies healthcare equity goals and discrete action steps to achieve these goals.
- Our hospital strategic plan outlines specific resources that have been dedicated to achieving our equity goals.
- Our hospital strategic plan describes our approach for engaging key stakeholders, such as community-based organizations.

Y

**CMS HCHE Measure Domain 2: Data Collection (Yes/No)**

- Our hospital strategic plan identifies healthcare equity goals and discrete action steps to achieve these goals.

- Our hospital has training for staff in culturally sensitive collection of demographics and/or social determinant of health information.
- Our hospital inputs demographic and/or social determinant of health information collected from patients into structured, interoperable data elements using a certified electronic health record (EHR) technology.

Y

CMS HCHE Measure Domain 3: Data Analysis (Yes/No)

- Our hospital stratifies key performance indicators by demographic and/or social determinants of health variables to identify equity gaps and includes this information in hospital performance dashboards.

Y

CMS HCHE Measure Domain 4: Quality Improvement (Yes/No)

- Our hospital participates in local, regional or national quality improvement activities focused on reducing health disparities.

Y

CMS HCHE Measure Domain 5: Leadership Engagement (Yes/No)

- Our hospital senior leadership, including chief executives and the entire hospital board of trustees, annually reviews our strategic plan for achieving health equity.
- Our hospital senior leadership, including chief executives and the entire hospital board of trustees, annually review key performance indicators stratified by demographic and/or social factors.

Y

Centers for Medicare & Medicaid Services (CMS) Social Drivers of Health (SDOH)

General acute care hospitals are required to report on rates of screenings and intervention rates among patients above 18 years old for five health related social needs (HRSN), which are food insecurity, housing instability, transportation problems, utility difficulties, and interpersonal safety. These rates are reported separately as being screened as positive for any of the five HRSNs, positive for each individual HRSN, and the intervention rate for each positively screened HRSN. For more information on the CMS SDOH, please visit the following link by copying and pasting the URL into your web browser:

<https://www.cms.gov/priorities/innovation/key-concepts/social-drivers-health-and-health-related-social-needs>

Number of patients admitted to an inpatient hospital stay who are 18 years or older on the date of admission and are screened for all of the five HRSN

6114

Total number of patients who are admitted to a hospital inpatient stay and who are 18 years or older on the date of admission

9757

Rate of patients admitted for an inpatient hospital stay who are 18 years or older on the date of admission, were screened for an HRSN, and who screened positive for one or more of the HRSNs

62.7

Table 2. Positive screening rates and intervention rates for the five Health Related Social Needs of the Centers of Medicare & Medicaid Services (CMS) Social Drivers of Health (SDOH).

Social Driver of Health	Number of positive screenings	Rate of positive screenings (%)	Number of positive screenings who received intervention	Rate of positive screenings who received intervention (%)
Food Insecurity	27	0.4	0	
Housing Instability	21	0.3	0	
Transportation Problems	14	0.2	0	
Utility Difficulties	Suppressed	Suppressed	0	
Interpersonal Safety	Suppressed	Suppressed	0	

## Core Quality Measures for General Acute Care Hospitals

There are two quality measures from the Hospital Consumer Assessment of Healthcare Providers and Systems (HCAHPS) survey. For more information on the HCAHPS survey, please visit the following link by copying and pasting the URL into your web browser:  
<https://hcahpsonline.org/en/survey-instruments/>

### Patient Recommends Hospital

The first HCAHPS quality measure is the percentage of patients who would recommend the hospital to friends and family. For this measure, general acute care hospitals provide the percentage of patient respondents who responded "probably yes" or "definitely yes" to whether they would recommend the hospital, the percentage of the people who responded to the survey (i.e., the response rate), and the inputs for the percentages. The percentages and inputs are stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding HCAHPS question number is 19.

Number of respondents who replied "probably yes" or "definitely yes" to HCAHPS Question 19, "Would you recommend this hospital to your friends and family?"

2217

Total number of respondents to HCAHPS Question 19

2358

Percentage of total respondents who responded "probably yes" or "definitely yes" to HCAHPS Question 19

94.0

Total number of people surveyed on HCAHPS Question 19

9432

Response rate, or the percentage of people who responded to HCAHPS Question 19

25.0

Table 3. Patient recommends hospital by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

<b>Race and/or Ethnicity</b>	<b>Number of "probably yes" or "definitely yes" responses</b>	<b>Total number of responses</b>	<b>Percent of "probably yes" or "definitely yes" responses (%)</b>	<b>Total number of patients surveyed</b>	<b>Response rate of patients surveyed (%)</b>

Female-to-male (FTM)/ transgender male/trans man					
Male					
Male-to-female (MTF)/ transgender female/trans woman					
Non-conforming gender					
Additional gender category or other					
Not disclosed					

## Patient Received Information in Writing

The second HCAHPS quality measure is the percentage of patients who reported receiving information in writing on symptoms and health problems to look out for after leaving the hospital. General acute care hospitals are required to provide the percentage of patient respondents who responded "yes" to being provided written information, the percentage of the people who responded to the survey (i.e., the response rate), and the inputs for these percentages. These percentages and inputs are stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding HCAHPS question number is 17.

Number of respondents who replied "yes" to HCAHPS Question 17, "During this hospital stay, did you get information in writing about what symptoms or health problems to look out for after you left the

hospital?"

2004  
Total number of respondents to HCAHPS Question 17  
2358

Percentage of respondents who responded "yes" to HCAHPS Question 17  
85.0

Total number of people surveyed on HCAHPS Question 17  
9432

Response rate, or the percentage of people who responded to HCAHPS Question 17  
25.0

Table 4. Patient reports receiving information in writing about symptoms or health problems by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

## Agency for Healthcare Research and Quality (AHRQ) Indicators

General acute care hospitals are required to report on two indicators from the Agency for Healthcare Research and Quality (AHRQ). For general information about AHRQ indicators, please visit the following link by copying and pasting the URL into your web browser:

<https://qualityindicators.ahrq.gov/>

## Pneumonia Mortality Rate

The Pneumonia Mortality Rate is defined as the rate of in-hospital deaths per 1,000 hospital discharges with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission for patients ages 18 years and older. General acute care hospitals report the Pneumonia Mortality Rate by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding AHRQ Inpatient Quality Indicator is 20. For more information about this indicator, please visit the following link by copying and pasting the URL into your web browser:

[https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI\\_20\\_Pneumonia\\_Mortality\\_Rate.pdf](https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_20_Pneumonia_Mortality_Rate.pdf)

## Death Rate among Surgical Inpatients with Serious Treatable Complications

The Death Rate among Surgical Inpatients with Serious Treatable Complications is defined as the rate of in-hospital deaths per 1,000 surgical discharges among patients ages 18-89 years old or obstetric patients with serious treatable complications. General acute care hospitals report this measure by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding AHRQ Patient Safety Indicator is 04. For more information about this indicator, please visit the following link by copying and pasting the URL into your web browser:  
[https://qualityindicators.ahrq.gov/Downloads/Modules/PSI/V2023/TechSpecs/PSI\\_04\\_Death\\_Rate\\_among\\_Surgical\\_Inpatients\\_with\\_Serious\\_Treatable\\_Complications.pdf](https://qualityindicators.ahrq.gov/Downloads/Modules/PSI/V2023/TechSpecs/PSI_04_Death_Rate_among_Surgical_Inpatients_with_Serious_Treatable_Complications.pdf)

## California Maternal Quality Care Collaborative (CMQCC) Core Quality Measures

There are three core quality maternal measures adopted from the California Maternal Quality Care Collaborative (CMQCC).

### CMQCC Nulliparous, Term, Singleton, Vertex (NTSV) Cesarean Birth Rate

The CMQCC Nulliparous, Term, Singleton, Vertex (NTSV) Cesarean Birth Rate is defined as nulliparous women with a term (at least 37 weeks gestation), singleton baby in a vertex position delivered by cesarian birth. General acute care hospitals report the NTSV Cesarean Birth Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. For more information, please visit the following link by copying and pasting the URL into your web browser:

<https://www.cmqcc.org/quality-improvement-toolkits/supporting-vaginal-birth/ntsv-cesarean-birth-measure-specifications>

## CMQCC Vaginal Birth After Cesarean (VBAC) Rate

The CMQCC Vaginal Birth After Cesarean (VBAC) Rate is defined as vaginal births per 1,000 deliveries by patients with previous Cesarean deliveries. General acute care hospitals report the VBAC Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The VBAC Rate uses the specifications of AHRQ Inpatient Quality Indicator 22. For more information, please visit the following link by copying and pasting the URL into your web browser:

[https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI\\_22\\_Vaginal\\_Birth\\_After\\_Cesarean\\_\(VBAC\)\\_Delivery\\_Rate\\_Uncomplicated.pdf](https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_22_Vaginal_Birth_After_Cesarean_(VBAC)_Delivery_Rate_Uncomplicated.pdf)

Number of vaginal delivery among cases with previous Cesarean delivery that meet the inclusion and exclusion criteria

50

Total number of birth discharges with previous Cesarean delivery that meet the inclusion and exclusion criteria

# Rate of vaginal delivery per 1,000 deliveries by patients with previous Cesarean deliveries

## 219.3

## CMQCC Exclusive Breast Milk Feeding Rate

The CMQCC Exclusive Breast Milk Feeding Rate is defined as the newborns per 100 who reached at least 37 weeks of gestation (or 3000g if gestational age is missing) who received breast milk

exclusively during their stay at the hospital. Other criteria are that the newborns did not go to the neonatal intensive care unit (NICU), transfer, or die, did not reflect multiple gestation, and did not have codes for parenteral nutrition or galactosemia. General acute care hospitals report the Exclusive Breast Milk Feeding Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The CMQCC Exclusive Breast Milk Feeding Rate uses the Joint Commission National Quality Measure PC-05. For more information, please visit the following link by copying and pasting the URL into your web browser:  
<https://manual.jointcommission.org/releases/TJC2024B/MIF0170.html>

Number of newborn cases that were exclusively fed breast milk during their hospital stay and meet the inclusion and exclusion criteria

1245

Total number of newborn cases born in the hospital that meet the inclusion and exclusion criteria

1700

Rate of newborn cases per 100 that were exclusively fed breast milk during their hospital stay and meet the inclusion and exclusion criteria

73.2

## HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate

General acute care hospitals are required to report several HCAI All-Cause Unplanned 30-Day Hospital Readmission Rates, which are broadly defined as the percentage of hospital-level, unplanned, all-cause readmissions after admission for eligible conditions within 30 days of hospital discharge for patients aged 18 years and older. These rates are first stratified based on any eligible condition, mental health disorders, substance use disorders, co-occurring disorders, and no behavioral health diagnosis. Then, each condition-stratified hospital readmission rate is further stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. For more information on the HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate, please visit the following link by copying and pasting the URL into your web browser:

[https://hcai.ca.gov/wp-content/uploads/2024/10/HCAI-All-Cause-Readmission-Rate-Exclusions\\_ADA.pdf](https://hcai.ca.gov/wp-content/uploads/2024/10/HCAI-All-Cause-Readmission-Rate-Exclusions_ADA.pdf)

## HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate – Any Eligible Condition

Number of inpatient hospital admissions which occurs within 30 days of the discharge date of an eligible index admission and were 18 years or older at time of admission

996

Total number of patients who were admitted to the general acute care hospital and were 18 years or older at time of admission

9603

Rate of hospital-level, unplanned, all-cause readmissions after admission for any eligible condition

within 30 days of hospital discharge for patients aged 18 and older

10.4

Table 10. HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate for any eligible condition by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

<b>Race and/or Ethnicity</b>	<b>Number of inpatient readmissions</b>	<b>Total number of admitted patients</b>	<b>Readmission rate (%)</b>

## Health Equity Plan

All general acute care hospitals report a health equity plan that identifies the top 10 disparities and a written plan to address them.

## Top 10 Disparities

Disparities for each hospital equity measure are identified by comparing the rate ratios by stratification groups. Rate ratios are calculated differently for measures with preferred low rates and those with preferred high rates. Rate ratios are calculated after applying the California Health and Human Services Agency's "Data De-Identification Guidelines (DDG)," dated September 23, 2016.

Table 15. Top 10 disparities and their rate ratio values.

Measures	Stratifications	Stratification Group	Stratification Rate	Reference Group	Reference Rate	Rate Ratio
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Age (excluding maternal measures)	65 and older	12.9	35 to 49	6.0	2.2
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Race and/or Ethnicity	Multiracial and/or Multiethnic (two or more races)	20.8	Hispanic or Latino	9.7	2.1
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Expected Payor	Medicare	13.3	Private	7.3	1.8
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Age (excluding maternal measures)	50 to 64	10.8	35 to 49	6.0	1.8
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Expected Payor	Medicaid	10.5	Private	7.3	1.4
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Race and/or Ethnicity	Black or African American	13.6	Hispanic or Latino	9.7	1.4
CMQCC Exclusive Breast Milk Feeding	Race and/or Ethnicity	Asian	64	White	86.3	1.3
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Age (excluding maternal measures)	18 to 34	7.4	35 to 49	6.0	1.2
CMQCC Exclusive Breast Milk Feeding	Race and/or Ethnicity	Hispanic or Latino	72.1	White	86.3	1.2
CMQCC Exclusive Breast Milk Feeding	Age (for maternal measures only)	18 to 29	65	30 to 39	75.2	1.2

#### Plan to address disparities identified in the data

The report highlights significant disparities in healthcare outcomes, particularly in 30-day readmission rates and exclusive breast milk feeding rates. The highest 30-day readmission rates are observed among patients aged 65 and older (12.8%), multiracial/multiethnic individuals (20.8%), Medicare recipients (13.2%), Medicaid recipients (10.2%), and Black/African American patients (13.1%). Additionally, exclusive breast milk feeding rates are notably lower among Asian, Hispanic/Latino, and younger maternal age groups. To address these disparities, key initiatives include implementing the 4Ms framework (Mentation, Mobility, Medication, What Matters) in discharge planning and post-discharge follow-up for older adults. The strategic integration of the 4Ms into readmission risk assessment involves aligning care with patient goals, optimizing and deprescribing medications, screening and acting on cognitive risks, and preserving function and preventing falls. The measurable objectives include reducing the 30-day readmission rate for patients aged 65 and older by 10% within 12 months and reducing the readmission rate for multiracial/multiethnic patients by 10% within the same timeframe. The overall timeframe for these initiatives is from Q4 2025 to Q4 2026.

For exclusive breast milk feeding rates, the target populations are Asian, Hispanic/Latino, and younger maternal age groups (18-29). Initiatives include culturally responsive lactation support, community partnerships, interpreter and translation services, data-driven monitoring, and patient-centered education. The goal is to achieve a 5% increase in exclusive breast milk feeding rates among these groups within 12 months, increase the percentage of mothers receiving lactation support prior to discharge, and improve patient satisfaction scores related to maternity and newborn care education.

The Regional Age Friendly Hospital System (AFHS) Core Team will be leading and supporting all 21 KP NCAL facilities to achieve IHI AFHS Level 1 Recognition status by end of 2025 and then HI AFHS Level 2 Recognition status by end of 2026. The team will also ensure that all facilities have protocols in place to affirmatively attest to receive full credit for all 5 Domains of the CMA AFHS Measure by May 2025. This will position our hospitals to consistently and reliably provide high quality care to all hospitalized elderly patients.

## **Performance in the priority area**

General acute care hospitals are required to provide hospital equity plans that address the top 10 disparities by identifying population impact and providing measurable objectives and specific timeframes. For each disparity, hospital equity plans will address performance across priority areas: person-centered care, patient safety, addressing patient social drivers of health, effective treatment, care coordination, and access to care.

### **Person-centered care**

Our current performance in person-centered care at Kaiser San Francisco has shown some notable improvements and areas of focus. In 2024, the baseline Exclusive Breast-Feeding (EBF) rates for Asian patients were 65% (306/478), and for Hispanic/Latino U.S.-born patients, it was 76.6% (131/171). For the first half of 2025, the EBF rates for Asian patients improved to 73% (197/270), while for Hispanic/Latino U.S.-born patients, it increased to 79.6% (75/93). The comparatively lower EBF rate among Asian patients identified this group as the priority population for targeted improvement efforts in 2025. Some of the key strategies included spreading awareness and initiating monitoring processes. A monthly EBF report identifies all patients who received formula supplementation, stratified by race, and is reviewed by Maternal Child Health leadership and interdisciplinary workgroups. Groups initially focused on providing equitable access to resources by ensuring that all educational materials have been translated into Spanish and Chinese to ensure accessibility across key patient populations. Enhanced language support for our clinicians was evaluated in 2024, and all translator iPads across Maternal Child Health units were updated to improve access to in-person and remote interpretation services. Overall, our efforts are focused on improving transparency, expanding equitable access to education and resources, and supporting measurable improvements in person-centered care outcomes. Continuous monitoring and targeted interventions are planned to continue into the coming year to address disparities and enhance the quality of care for all our patients.

For our healthcare system seniors, our focused improvements were around ensuring patient goals and preferences are documented in discharge planning. In addition, life care planning referrals process was optimized and offered to all high-risk patients proactively, prior to hospitalization. Finally, cultural and linguistical appropriate service programs continue to be evaluated and monitored for improvement opportunities, in our quality and safety assurance and performance improvement committees.

### **Patient safety**

To improve patient safety and reduce avoidable readmissions, a comprehensive set of initiatives has been implemented across the care continuum, with a particular focus on heart failure (CHF) and sepsis management. Medication reconciliation and fall risk assessments are now consistently completed for all discharged patients, ensuring safer transitions of care. In response to high readmission rates, evidence-based bundles for sepsis and CHF have been deployed. These bundles are designed to standardize care delivery and enhance early intervention, particularly for patients at elevated risk due to clinical or social factors. A key initiative involves the standardization of heart

failure discharge pathways. CHF patients receive a structured discharge plan that includes thorough medication reconciliation, early outpatient follow-up for our seniors who are identified as high risk upon post discharge risk assessment, and education on symptom management. This approach ensures continuity of care and empowers patients to manage their conditions effectively post-discharge. Culturally responsive materials and interpreter services are made available, and community partnerships are leveraged to extend support beyond the hospital setting. Social determinants of health (SDOH) are systematically screened for all heart failure patients at admission. Factors such as food insecurity, housing instability, transportation challenges, utility access, and interpersonal safety are assessed. Patients who screen positive are referred to social work and connected with appropriate community resources to mitigate these risks. To ensure accountability and continuous improvement, data-driven monitoring is employed. Readmission rates for heart failure are stratified monthly by race/ethnicity and insurance type. This allows for timely adjustments to interventions based on emerging trends and patient feedback. The impact of these efforts is measured through several outcome metrics. The primary goal is to achieve a 10% reduction in 30-day heart failure-related readmissions among Medicare/Medicaid and Black/African American patients within 12 months. Additionally, the program aims to reach a 90% SDOH screening rate for heart failure admissions and increase early outpatient follow-up rates for high-risk patients.

#### Addressing patient social drivers of health

To advance equity and improve care outcomes, a system-wide initiative has been launched to integrate universal screening for social determinants of health (SDOH) into inpatient care. This effort ensures that every adult inpatient is assessed for critical non-clinical factors that may impact their health and recovery, including food insecurity, housing instability, transportation challenges, utility access, and interpersonal safety. Patients who screen positive for any of these SDOH factors are promptly referred to social work teams and connected with appropriate community resources. These referral pathways are designed to be seamless and responsive, enabling timely interventions that address underlying social needs and reduce barriers to care. To ensure accountability and continuous improvement, the initiative includes quarterly monitoring and reporting of both screening rates and intervention outcomes. This data-driven approach allows for targeted adjustments and supports transparency in progress toward equity goals. The measurable objective is clear: achieve a 90% SDOH screening rate for all adult inpatients by the fourth quarter of 2026. This benchmark reflects a commitment to embedding social care into clinical workflows and fostering a more holistic, patient-centered model of care.

### **Performance in the priority area continued**

Performance across all of the following priority areas.

#### Effective treatment

To enhance care quality and reduce readmissions for high-risk conditions such as sepsis and congestive heart failure (CHF), a series of evidence-based strategies have been implemented. Central to this approach is the use of standardized care pathways that guide clinical decision-making and ensure consistency in treatment for patients with complex diagnoses. A data-driven lens is applied to monitor treatment outcomes, with metrics stratified by race, ethnicity, and insurance status. This allows for the identification of disparities and the tailoring of interventions to promote equity in care delivery. Risk stratification using the LACE score—based on length of stay, acuity, comorbidities, and emergency department visits—helps identify patients at elevated risk for readmission. These individuals benefit from a suite of targeted interventions designed to support safe transitions from hospital to home. Key components of the discharge process include:

- Standardized discharge summaries that ensure accurate handoffs and continuity of care.
  - Medication reconciliation to prevent adverse drug events post-discharge.
  - Post-discharge follow-up calls within 72 hours to confirm care plans and reinforce appointment adherence.
  - Primary care follow-up within 7 days to monitor recovery and address emerging concerns.
  - A transition hotline that provides patients with direct access to support, helping them navigate post-discharge challenges and avoid unnecessary hospital returns.
- Together, these initiatives reflect a proactive, patient-centered approach to managing complex conditions and improving outcomes across diverse populations

#### Care coordination

To strengthen post-discharge care and reduce readmissions among high-risk patients, a coordinated set of transitional care strategies has been implemented. Every high-risk discharge is now supported by scheduled POSH (Post-Discharge Outreach for Safety and Health) calls and timely primary care follow-up appointments. These touchpoints ensure that patients understand their care plans, have access to necessary medications, and are connected to appropriate services. Patients are also given access to transition hotlines and care navigators, providing direct support and guidance during the vulnerable post-discharge period. These resources help address questions, resolve issues early, and prevent unnecessary hospital returns. Collaboration with skilled nursing facilities (SNFs) and home health agencies has been enhanced to ensure continuity of care. These partnerships facilitate smoother transitions and better alignment of care plans across settings. A particular focus has been placed on patients discharged to home with home health services, as data has shown they experience disproportionately high readmission rates. By targeting this group with additional support and monitoring, the initiative aims to close gaps in care and improve outcomes for some of the most vulnerable patients.

#### Access to care

To improve care continuity and reduce barriers to post-discharge recovery, targeted outreach efforts have been launched for patients covered by Medicaid and Medicare. These efforts focus on ensuring timely follow-up appointments and reinforcing care plans, particularly for individuals at higher risk of readmission. Recognizing that access challenges can hinder recovery, the program includes transportation assistance and telehealth options for patients facing logistical or mobility barriers. These services help bridge gaps in care and ensure that patients can engage with their providers without delay. To support patients with limited English proficiency, language services are made available to facilitate clear communication and understanding. Interpreter support and translated materials ensure that all patients receive equitable, culturally responsive care regardless of their primary language. Advanced Care at Home is a new service with planned launch in late 2025 to early 2026, which will provide hospital-level care to eligible patients in their own homes, using a combination of virtual monitoring, in-person clinical visits, and technology for 24/7 support. The program aims to reduce inpatient bed demand, improve patient experience and outcomes, and is currently in the implementation and socialization phase with training and awareness activities underway. Together, these strategies reflect a commitment to inclusive, patient-centered care that addresses both clinical and social needs during the critical transition from hospital to home.

## Methodology Guidelines

Did the hospital follow the methodology in the Measures Submission Guide? (Y/N)
