

Hospital Equity Measures Report

General Information

Report Type:	Hospital Equity Measures Report
Year:	2024
Hospital Name:	KAISER FOUNDATION HOSPITAL - SAN LEANDRO
Facility Type:	General Acute Care Hospital
Hospital HCAI ID:	106014337
Report Period:	01/01/2024 - 12/31/2024
Status:	Complete
Due Date:	11/29/2025
Last Updated:	01/17/2026
Hospital Location with Clean Water and Air:	Y
Hospital Web Address for Equity Report:	https://tinyurl.com/KFH-SLN

Overview

Assembly Bill No. 1204 requires the Department of Health Care Access and Information (HCAI) to develop and administer a Hospital Equity Measures Reporting Program to collect and post summaries of key hospital performance and patient outcome data regarding sociodemographic information, including but not limited to age, sex, race/ethnicity, payor type, language, disability status, and sexual orientation and gender identity.

Hospitals (general acute, children's, and acute psychiatric) and hospital systems are required to annually submit their reports to HCAI. These reports contain summaries of each measure, the top 10 disparities, and the equity plans to address the identified disparities. HCAI is required to maintain a link on the HCAI website that provides access to the content of hospital equity measures reports and equity plans to the public. All submitted hospitals are required to post their reports on their websites, as well.

Laws and Regulations

For more information on Assembly Bill No. 1204, please visit the following link by copying and pasting the URL into your web browser:

https://leginfo.legislature.ca.gov/faces/billTextClient.xhtml?bill_id=202120220AB1204

Hospital Equity Measures

Joint Commission Accreditation

General acute care hospitals are required to report three structural measures based on the Commission Accreditation's Health Care Disparities Reduction and Patient-Centered Communication Accreditation Standards. For more information on these measures, please visit the following link by copying and pasting the URL into your web browser:

<https://www.jointcommission.org/standards/r3-report/r3-report-issue-36-new-requirements-to-reduce>

-health-care-disparities/

The first two structural measures are scored as "yes" or "no"; the third structural measure comprises the percentages of patients by five categories of preferred languages spoken, in addition to one other/unknown language category.

Designate an individual to lead hospital health equity activities (Y = Yes, N = No).

Y

Provide documentation of policy prohibiting discrimination (Y = Yes, N = No).

Y

Number of patients that were asked their preferred language, five defined categories and one other/unknown languages category.

96057

Table 1. Summary of preferred languages reported by patients.

Languages	Number of patients who report preferring language	Total number of patients	Percentage of total patients who report preferring language (%)
English Language	81038	96057	84.4
Spanish Language	9626	96057	10.0
Asian Pacific Islander Languages	4450	96057	4.6
Middle Eastern Languages	334	96057	0.3
American Sign Language	89	96057	0.1
Other Languages	520	96057	0.5

Centers for Medicare & Medicaid Services (CMS) Hospital Commitment to Health Equity Structural (HCHE) Measure

There are five domains that make up the CMS Hospital Commitment to HCHE measures. Each domain is scored as "yes" or "no." In order to score "yes," a general acute care hospital is required to confirm all the domain's attestations. Lack of one or more of the attestations results in a score of "no." For more information on the CMS Hospital Commitment to HCHE measures, please visit the following link by copying and pasting the URL into your web browser:

<https://data.cms.gov/provider-data/topics/hospitals/health-equity>

Centers for Medicare & Medicaid Services (CMS) Hospital Commitment to Health Equity Structural (HCHE) Measure Domain 1: Strategic Planning (Yes/No)

- Our hospital strategic plan identifies priority populations who currently experience health disparities.
- Our hospital strategic plan identifies healthcare equity goals and discrete action steps to achieve these goals.
- Our hospital strategic plan outlines specific resources that have been dedicated to achieving our equity goals.
- Our hospital strategic plan describes our approach for engaging key stakeholders, such as community-based organizations.

Y

CMS HCHE Measure Domain 2: Data Collection (Yes/No)

- Our hospital strategic plan identifies healthcare equity goals and discrete action steps to achieve these goals.

- Our hospital has training for staff in culturally sensitive collection of demographics and/or social determinant of health information.
- Our hospital inputs demographic and/or social determinant of health information collected from patients into structured, interoperable data elements using a certified electronic health record (EHR) technology.

Y

CMS HCHE Measure Domain 3: Data Analysis (Yes/No)

- Our hospital stratifies key performance indicators by demographic and/or social determinants of health variables to identify equity gaps and includes this information in hospital performance dashboards.

Y

CMS HCHE Measure Domain 4: Quality Improvement (Yes/No)

- Our hospital participates in local, regional or national quality improvement activities focused on reducing health disparities.

Y

CMS HCHE Measure Domain 5: Leadership Engagement (Yes/No)

- Our hospital senior leadership, including chief executives and the entire hospital board of trustees, annually reviews our strategic plan for achieving health equity.
- Our hospital senior leadership, including chief executives and the entire hospital board of trustees, annually review key performance indicators stratified by demographic and/or social factors.

Y

Centers for Medicare & Medicaid Services (CMS) Social Drivers of Health (SDOH)

General acute care hospitals are required to report on rates of screenings and intervention rates among patients above 18 years old for five health related social needs (HRSN), which are food insecurity, housing instability, transportation problems, utility difficulties, and interpersonal safety. These rates are reported separately as being screened as positive for any of the five HRSNs, positive for each individual HRSN, and the intervention rate for each positively screened HRSN. For more information on the CMS SDOH, please visit the following link by copying and pasting the URL into your web browser:

<https://www.cms.gov/priorities/innovation/key-concepts/social-drivers-health-and-health-related-social-needs>

Number of patients admitted to an inpatient hospital stay who are 18 years or older on the date of admission and are screened for all of the five HRSN

5169

Total number of patients who are admitted to a hospital inpatient stay and who are 18 years or older on the date of admission

9169

Rate of patients admitted for an inpatient hospital stay who are 18 years or older on the date of admission, were screened for an HRSN, and who screened positive for one or more of the HRSNs

56.4

Table 2. Positive screening rates and intervention rates for the five Health Related Social Needs of the Centers of Medicare & Medicaid Services (CMS) Social Drivers of Health (SDOH).

Social Driver of Health	Number of positive screenings	Rate of positive screenings (%)	Number of positive screenings who received intervention	Rate of positive screenings who received intervention (%)
Food Insecurity	86	1.7	0	
Housing Instability	88	1.7	0	
Transportation Problems	37	0.7	0	
Utility Difficulties	32	0.6	0	
Interpersonal Safety	15	0.3	0	

Core Quality Measures for General Acute Care Hospitals

There are two quality measures from the Hospital Consumer Assessment of Healthcare Providers and Systems (HCAHPS) survey. For more information on the HCAHPS survey, please visit the following link by copying and pasting the URL into your web browser:

<https://hcahpsonline.org/en/survey-instruments/>

Patient Recommends Hospital

The first HCAHPS quality measure is the percentage of patients who would recommend the hospital to friends and family. For this measure, general acute care hospitals provide the percentage of patient respondents who responded "probably yes" or "definitely yes" to whether they would recommend the hospital, the percentage of the people who responded to the survey (i.e., the response rate), and the inputs for the percentages. The percentages and inputs are stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding HCAHPS question number is 19.

Number of respondents who replied "probably yes" or "definitely yes" to HCAHPS Question 19, "Would you recommend this hospital to your friends and family?"

382

Total number of respondents to HCAHPS Question 19

398

Percentage of total respondents who responded "probably yes" or "definitely yes" to HCAHPS Question 19

96.0

Total number of people surveyed on HCAHPS Question 19

2211

Response rate, or the percentage of people who responded to HCAHPS Question 19

18.0

Table 3. Patient recommends hospital by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

Race and/or Ethnicity	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
American Indian or Alaska Native					
Asian					
Black or African American					
Hispanic or Latino					
Middle Eastern or North African					
Multiracial and/or Multiethnic (two or more races)					
Native Hawaiian or Pacific Islander					
White					

Age	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Age < 18					
Age 18 to 34					
Age 35 to 49					
Age 50 to 64					
Age 65 Years and Older					

Sex assigned at birth	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Female					
Male					
Unknown					

Payer Type	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)

Male					
Male-to-female (MTF)/ transgender female/trans woman					
Non-conforming gender					
Additional gender category or other					
Not disclosed					

Patient Received Information in Writing

The second HCAHPS quality measure is the percentage of patients who reported receiving information in writing on symptoms and health problems to look out for after leaving the hospital. General acute care hospitals are required to provide the percentage of patient respondents who responded "yes" to being provided written information, the percentage of the people who responded to the survey (i.e., the response rate), and the inputs for these percentages. These percentages and inputs are stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding HCAHPS question number is 17.

Number of respondents who replied "yes" to HCAHPS Question 17, "During this hospital stay, did you get information in writing about what symptoms or health problems to look out for after you left the

hospital?"

342
Total number of respondents to HCAHPS Question 17
398

Percentage of respondents who responded "yes" to HCAHPS Question 17
85.9

Total number of people surveyed on HCAHPS Question 17
2211

Response rate, or the percentage of people who responded to HCAHPS Question 17
18.0

Table 4. Patient reports receiving information in writing about symptoms or health problems by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

Agency for Healthcare Research and Quality (AHRQ) Indicators

General acute care hospitals are required to report on two indicators from the Agency for Healthcare Research and Quality (AHRQ). For general information about AHRQ indicators, please visit the following link by copying and pasting the URL into your web browser:

<https://qualityindicators.ahrq.gov/>

Pneumonia Mortality Rate

The Pneumonia Mortality Rate is defined as the rate of in-hospital deaths per 1,000 hospital discharges with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission for patients ages 18 years and older. General acute care hospitals report the Pneumonia Mortality Rate by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding AHRQ Inpatient Quality Indicator is 20. For more information about this indicator, please visit the following link by copying and pasting the URL into your web browser:

https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_20_Pneumonia_Mortality_Rate.pdf

Number of in-hospital deaths with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission

14

Total number of hospital discharges with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission

225

Rate of in-hospital deaths per 1,000 hospital discharges with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission

62.2

Table 5. Pneumonia Mortality Rate by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

Race and/or Ethnicity	Number of in-hospital deaths that meet the inclusion/exclusion criteria	Number of hospital discharges that meet the inclusion/exclusion criteria	Rate of in-hospital deaths per 1,000 hospital discharges that meet the inclusion/exclusion criteria (%)

Death Rate among Surgical Inpatients with Serious Treatable Complications

The Death Rate among Surgical Inpatients with Serious Treatable Complications is defined as the rate of in-hospital deaths per 1,000 surgical discharges among patients ages 18-89 years old or obstetric patients with serious treatable complications. General acute care hospitals report this measure by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding AHRQ Patient Safety Indicator is 04. For more information about this indicator, please visit the following link by copying and pasting the URL into your web browser:
https://qualityindicators.ahrq.gov/Downloads/Modules/PSI/V2023/TechSpecs/PSI_04_Death_Rate_among_Surgical_Inpatients_with_Serious_Treatable_Complications.pdf

California Maternal Quality Care Collaborative (CMQCC) Core Quality Measures

There are three core quality maternal measures adopted from the California Maternal Quality Care Collaborative (CMQCC).

CMQCC Nulliparous, Term, Singleton, Vertex (NTSV) Cesarean Birth Rate

The CMQCC Nulliparous, Term, Singleton, Vertex (NTSV) Cesarean Birth Rate is defined as nulliparous women with a term (at least 37 weeks gestation), singleton baby in a vertex position delivered by cesarian birth. General acute care hospitals report the NTSV Cesarean Birth Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. For more information, please visit the following link by copying and pasting the URL into your web browser:

<https://www.cmqcc.org/quality-improvement-toolkits/supporting-vaginal-birth/ntsv-cesarean-birth-measure-specifications>

CMQCC Vaginal Birth After Cesarean (VBAC) Rate

The CMQCC Vaginal Birth After Cesarean (VBAC) Rate is defined as vaginal births per 1,000 deliveries by patients with previous Cesarean deliveries. General acute care hospitals report the VBAC Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The VBAC Rate uses the specifications of AHRQ Inpatient Quality Indicator 22. For more information, please visit the following link by copying and pasting the URL into your web browser:

[https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_22_Vaginal_Birth_After_Cesarean_\(VBAC\)_Delivery_Rate_Uncomplicated.pdf](https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_22_Vaginal_Birth_After_Cesarean_(VBAC)_Delivery_Rate_Uncomplicated.pdf)

CMQCC Exclusive Breast Milk Feeding Rate

The CMQCC Exclusive Breast Milk Feeding Rate is defined as the newborns per 100 who reached at least 37 weeks of gestation (or 3000g if gestational age is missing) who received breast milk

exclusively during their stay at the hospital. Other criteria are that the newborns did not go to the neonatal intensive care unit (NICU), transfer, or die, did not reflect multiple gestation, and did not have codes for parenteral nutrition or galactosemia. General acute care hospitals report the Exclusive Breast Milk Feeding Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The CMQCC Exclusive Breast Milk Feeding Rate uses the Joint Commission National Quality Measure PC-05. For more information, please visit the following link by copying and pasting the URL into your web browser: <https://manual.jointcommission.org/releases/TJC2024B/MIF0170.html>

Number of newborn cases that were exclusively fed breast milk during their hospital stay and meet the inclusion and exclusion criteria

HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate

General acute care hospitals are required to report several HCAI All-Cause Unplanned 30-Day Hospital Readmission Rates, which are broadly defined as the percentage of hospital-level, unplanned, all-cause readmissions after admission for eligible conditions within 30 days of hospital discharge for patients aged 18 years and older. These rates are first stratified based on any eligible condition, mental health disorders, substance use disorders, co-occurring disorders, and no behavioral health diagnosis. Then, each condition-stratified hospital readmission rate is further stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. For more information on the HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate, please visit the following link by copying and pasting the URL into your web browser:

https://hcai.ca.gov/wp-content/uploads/2024/10/HCAI-All-Cause-Readmission-Rate-Exclusions_ADA.pdf

HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate – Any Eligible Condition

Number of inpatient hospital admissions which occurs within 30 days of the discharge date of an eligible index admission and were 18 years or older at time of admission

1108

Total number of patients who were admitted to the general acute care hospital and were 18 years or older at time of admission

9098

Rate of hospital-level, unplanned, all-cause readmissions after admission for any eligible condition

within 30 days of hospital discharge for patients aged 18 and older

12.2

Health Equity Plan

All general acute care hospitals report a health equity plan that identifies the top 10 disparities and a written plan to address them.

Top 10 Disparities

Disparities for each hospital equity measure are identified by comparing the rate ratios by stratification groups. Rate ratios are calculated differently for measures with preferred low rates and those with preferred high rates. Rate ratios are calculated after applying the California Health and Human Services Agency's "Data De-Identification Guidelines (DDG)," dated September 23, 2016.

Table 15. Top 10 disparities and their rate ratio values.

Measures	Stratifications	Stratification Group	Stratification Rate	Reference Group	Reference Rate	Rate Ratio
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Age (excluding maternal measures)	65 and older	18.6	18 to 34	4.5	4.1
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Age (excluding maternal measures)	50 to 64	18.2	18 to 34	4.5	4.0
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Expected Payor	Medicare	19.4	Private	7.2	2.7
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Race and/or Ethnicity	Black or African American	16.2	Asian	9.4	1.7
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Race and/or Ethnicity	White	15.8	Asian	9.4	1.7
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Age (excluding maternal measures)	35 to 49	6.5	18 to 34	4.5	1.4
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Expected Payor	Medicaid	10.2	Private	7.2	1.4
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Race and/or Ethnicity	Native Hawaiian or Pacific Islander	12.5	Asian	9.4	1.3
CMQCC Exclusive Breast Milk Feeding	Race and/or Ethnicity	Asian	72.7	White	84.7	1.2
CMQCC Exclusive Breast Milk Feeding	Race and/or Ethnicity	Multiracial and/or Multiethnic (two or more races)	75	White	84.7	1.1

Plan to address disparities identified in the data

Using the health equity report, we will identify the impact of the population. We will reduce HCAI all-cause unplanned 30-day hospital readmissions by 10% within 2 years. We offer our patients culturally tailored patient education, we use interpreters as needed, we will continue to expand our community partnership and continue workforce training. We create personalized, culturally sensitive care plans for the older population to improve quality of life and reduce readmissions by addressing physical, emotional, and social needs. We also assess social determinants of health (SDOH) to ensure patients' basic needs are met and prevent readmission.

For breast milk feeding, we will provide culturally tailored breastfeeding education and lactation support to meet the needs of Asian and all other racial and ethnic groups. Professional interpreters and bilingual lactation consultants will ensure effective, culturally competent care. We will continue to strengthen community partnerships and emphasize cultural humility, health equity, and inclusive maternal-infant care through workforce training, ensuring staff deliver compassionate, equitable, and responsive care.

The Regional Age Friendly Hospital System (AFHS) Core Team will be leading and supporting all 21 KP NCAL facilities to achieve IHI AFHS Level 1 Recognition status by end of 2025 and then HI AFHS Level 2 Recognition status by end of 2026. The team will also ensure that all facilities have protocols in place to affirmatively attest to receive full credit for all 5 Domains of the CMA AFHS Measure by May 2025. This will position our hospitals to consistently and reliably provide high quality care to all hospitalized elderly patients.

Performance in the priority area

General acute care hospitals are required to provide hospital equity plans that address the top 10

disparities by identifying population impact and providing measurable objectives and specific timeframes. For each disparity, hospital equity plans will address performance across priority areas: person-centered care, patient safety, addressing patient social drivers of health, effective treatment, care coordination, and access to care.

Person-centered care

We use HCAHPS patient experience scores to assess our performance in person-centered care. We are committed to implementation of age-friendly care (4Ms framework: What Matters, Medication, Mentation, Mobility). We have patient and family advisory councils. We will continue to expand our shared decision-making tools. Through various outpatient programs, we make follow-up phone calls to discharged patients to increase likelihood of compliance. We routinely engage in goals of care conversations and palliative care conversations to assess the appropriate level of care. We support effective treatment and promote health equity by implementing comprehensive outpatient follow-up programs. Our team proactively contacts patients after discharge to encourage adherence to their care plans and improve health outcomes. Additionally, we regularly conduct goals-of-care and palliative care discussions to ensure each patient receives care that aligns with their individual needs and preferences. These strategies help us provide the appropriate level of care, reduce disparities, and foster patient-centered decision-making.

For exclusive breast milk feeding, engagement efforts include the Patient and Member Advisory Committee and the Inpatient Care Experience Committee. We are expanding shared decision-making tools to strengthen communication and trust between families and care teams through birth plan huddles and breastfeeding intention reviews upon admission.

Patient safety

We monitor patient safety events through a reporting system called Safety Priority Index (SPI). SPI is a comprehensive key performance indicator for patient safety. It was designed to encourage both continuous improvement and sustained vigilance. It is composed of 7 types of patient safety events: All Surgical Site Infections (SSIs), hospital onset C-Diff, Falls with any Injury, Hospital Acquired Pneumonia (HAP), Hospital Acquired Pressure Injuries (HAPIs) Stage 2 and above, Catheter Associated Urinary Tract Infection (CAUTI), and Central Line Associated Blood Stream Infection (CLABSI). We participate in daily safety huddles. We have implemented high reliability training. We are a Just Culture. At Kaiser Permanente, we foster a proactive speak-up culture that empowers all staff members to report concerns and potential safety issues without hesitation. We are committed to advancing our journey as a Highly Reliable Organization (HRO) by providing comprehensive training and education on HRO principles to both leaders and frontline staff. Additionally, we prioritize patient education on infection prevention, recognizing it as a fundamental component of our overall patient safety strategy and our mission to promote health equity.

In Maternal Child Health, we advance patient safety and equity through culturally tailored lactation education, interpreter services, and active engagement with the Patient Advisory Committee and Inpatient Care Experience Committee to address barriers. Initiatives such as donor breast milk use and antenatal hand-expressed milk promotion help reduce hyperbilirubinemia and hypoglycemia. Progress is monitored through race- and ethnicity-specific breastfeeding rates, reviewed at monthly safety meetings, with equity-related issues tracked via incident reports. These efforts ensure every mother–infant dyad receives safe, person-centered, and equitable care.

Addressing patient social drivers of health

We screen patients for social determinants of health (SDOH) upon admission to the hospital (food insecurity, housing instability, transportation barriers, etc.). We refer those patients who screen positive to Medical Social Workers (MSWs). We partner with community-based organizations. We use ICD-10 Z-codes to document social determinants of health (SDOH) needs. We offer internal and

community referrals to address specific SDOH needs, improving outcomes and reducing readmissions. Enhanced case management is essential in care planning, and all providers can easily access referrals via the Kaiser per KP Community Resource platform. To address patients' SDOH, we facilitate both internal and community-based referrals tailored to individual needs, which has resulted in improved health outcomes and a reduction in hospital readmissions. Our approach includes robust case management that is integral to the care planning process. Additionally, all providers have streamlined access to referral resources through the KP Community Resource platform, ensuring timely and coordinated support for patients facing SDOH challenges. In Maternal Child Health, we recognize that SDOH factors—such as language barriers, cultural beliefs, and resource access—affect exclusive breastfeeding outcomes. MSWs help address these barriers through community referrals, culturally tailored education, and interpreter coordination. We also collaborate with the Patient and Member Advisory Councils and the Inpatient Care Experience Committee to ensure interventions meet the needs of Asian families and other diverse populations. Progress is tracked through exclusive breastfeeding rates by race and ethnicity, monitored via quality dashboards and monthly safety meetings. These efforts aim to improve equitable breastfeeding support, reduce disparities, and ensure every mother–infant dyad receives the guidance and resources needed for safe, successful breastfeeding.

Performance in the priority area continued

Performance across all of the following priority areas.

Effective treatment

We participate in the CMS and The Joint Commission core measures. We participate in the American Heart Association (AHA) Get With The Guidelines stroke, coronary artery disease, heart failure, and comprehensive stroke programs. We have clinical pathways for chronic diseases such as diabetes, hypertension, congestive heart failure (CHF), and chronic obstructive pulmonary disease (COPD). We have medication adherence programs. We emphasize SMART goals when care planning. SMART goals are a framework for setting clear, actionable objectives that stand for Specific, Measurable, Achievable, Relevant, and Time-bound. This method ensures goals are well-defined, trackable, realistic, aligned with broader objectives, and have a deadline, which increases the likelihood of achieving them. Our evidence-based practices help inform continuous data improvement efforts and align with The Joint Commission core measures to improve patient outcomes.

In Maternal Child Health, we participate in CMS quality programs and report key maternal and newborn measures to ensure safe, evidence-based care. Performance data informs improvement strategies and supports adherence to Joint Commission standards, including safe delivery practices, infection prevention, and standardized clinical protocols. Participation in these programs strengthens performance monitoring, promotes sharing of best practices, and drives ongoing improvements in care delivery—ensuring every mother–infant dyad receives the highest quality, evidence-based treatment.

Care coordination

Our transition of care programs includes medication reconciliation, discharge planning, and follow-up calls. We integrate inpatient, outpatient, and post-acute care through case managers and care navigators.

In Maternal Child Health, KPSLN prioritizes safe and seamless transitions from hospital to home. Families receive personalized discharge materials with instructions on infant care, breastfeeding, medications, follow-up appointments, and community resources. These materials are culturally

tailored and available in multiple languages to meet the needs of our diverse population. Care teams review discharge plans with patients and families in their preferred language, utilizing interpreter services to confirm understanding and promote adherence. Medical Social Workers assist with home health services, durable medical equipment, and breast pump coordination for lactation support.

Access to care

We monitor appointment waiting times, after-hours access and telehealth. We have language access services. Prior to patient's discharge, we assist in making follow-up appointments with the patient's primary care physician (PCP) within 5 to 7 days of discharge. Our members also have access to a registered nurse (RN) and/or provider via telephone calls 24 hours a day, 7 days a week. Based on patient needs, we provide the following care options: Advanced Care at Home (ACAH), Home Health, Hospice, Skilled Nursing Facility (SNF), Transitions Program and virtual/telephone appointments are available for those who cannot attend in-person.

In Maternal Child Health, we ensure timely, equitable access through same-day and early prenatal appointments, after-hours support, and telehealth services. Lactation support is available across all care settings—prenatal, inpatient, and postpartum. Interpreter services, culturally tailored education, and community partnerships help overcome barriers related to language, culture, and socioeconomic factors.

Methodology Guidelines

Did the hospital follow the methodology in the Measures Submission Guide? (Y/N)
