

Hospital Equity Measures Report

General Information

Report Type:	Hospital Equity Measures Report
Year:	2024
Hospital Name:	SENECA DISTRICT HOSPITAL
Facility Type:	General Acute Care Hospital
Hospital HCAI ID:	106321016
Report Period:	1/1/2024 - 12/31/2024
Status:	Complete
Due Date:	11/29/2025
Last Updated:	01/22/2026
Hospital Location with Clean Water and Air:	Y
Hospital Web Address for Equity Report:	www.senecahospital.org/equityreport2024/

Overview

Assembly Bill No. 1204 requires the Department of Health Care Access and Information (HCAI) to develop and administer a Hospital Equity Measures Reporting Program to collect and post summaries of key hospital performance and patient outcome data regarding sociodemographic information, including but not limited to age, sex, race/ethnicity, payor type, language, disability status, and sexual orientation and gender identity.

Hospitals (general acute, children's, and acute psychiatric) and hospital systems are required to annually submit their reports to HCAI. These reports contain summaries of each measure, the top 10 disparities, and the equity plans to address the identified disparities. HCAI is required to maintain a link on the HCAI website that provides access to the content of hospital equity measures reports and equity plans to the public. All submitted hospitals are required to post their reports on their websites, as well.

Laws and Regulations

For more information on Assembly Bill No. 1204, please visit the following link by copying and pasting the URL into your web browser:

https://leginfo.legislature.ca.gov/faces/billTextClient.xhtml?bill_id=202120220AB1204

Hospital Equity Measures

Joint Commission Accreditation

General acute care hospitals are required to report three structural measures based on the Commission Accreditation's Health Care Disparities Reduction and Patient-Centered Communication Accreditation Standards. For more information on these measures, please visit the following link by copying and pasting the URL into your web browser:

<https://www.jointcommission.org/standards/r3-report/r3-report-issue-36-new-requirements-to-reduce>

-health-care-disparities/

The first two structural measures are scored as "yes" or "no"; the third structural measure comprises the percentages of patients by five categories of preferred languages spoken, in addition to one other/unknown language category.

Designate an individual to lead hospital health equity activities (Y = Yes, N = No).

Y

Provide documentation of policy prohibiting discrimination (Y = Yes, N = No).

Y

Number of patients that were asked their preferred language, five defined categories and one other/unknown languages category.

2734

Table 1. Summary of preferred languages reported by patients.

Languages	Number of patients who report preferring language	Total number of patients	Percentage of total patients who report preferring language (%)
English Language	2720	2734	99.5
Spanish Language	suppressed	2734	suppressed
Asian Pacific Islander Languages	suppressed	2734	suppressed
Middle Eastern Languages	suppressed	2734	suppressed
American Sign Language		2734	
Other Languages	suppressed	2734	suppressed

Centers for Medicare & Medicaid Services (CMS) Hospital Commitment to Health Equity Structural (HCHE) Measure

There are five domains that make up the CMS Hospital Commitment to HCHE measures. Each domain is scored as "yes" or "no." In order to score "yes," a general acute care hospital is required to confirm all the domain's attestations. Lack of one or more of the attestations results in a score of "no." For more information on the CMS Hospital Commitment to HCHE measures, please visit the following link by copying and pasting the URL into your web browser:

<https://data.cms.gov/provider-data/topics/hospitals/health-equity>

Centers for Medicare & Medicaid Services (CMS) Hospital Commitment to Health Equity Structural (HCHE) Measure Domain 1: Strategic Planning (Yes/No)

- Our hospital strategic plan identifies priority populations who currently experience health disparities.
- Our hospital strategic plan identifies healthcare equity goals and discrete action steps to achieve these goals.
- Our hospital strategic plan outlines specific resources that have been dedicated to achieving our equity goals.
- Our hospital strategic plan describes our approach for engaging key stakeholders, such as community-based organizations.

Y

CMS HCHE Measure Domain 2: Data Collection (Yes/No)

- Our hospital strategic plan identifies healthcare equity goals and discrete action steps to achieve these goals.

- Our hospital has training for staff in culturally sensitive collection of demographics and/or social determinant of health information.
- Our hospital inputs demographic and/or social determinant of health information collected from patients into structured, interoperable data elements using a certified electronic health record (EHR) technology.

Y

CMS HCHE Measure Domain 3: Data Analysis (Yes/No)

- Our hospital stratifies key performance indicators by demographic and/or social determinants of health variables to identify equity gaps and includes this information in hospital performance dashboards.

Y

CMS HCHE Measure Domain 4: Quality Improvement (Yes/No)

- Our hospital participates in local, regional or national quality improvement activities focused on reducing health disparities.

Y

CMS HCHE Measure Domain 5: Leadership Engagement (Yes/No)

- Our hospital senior leadership, including chief executives and the entire hospital board of trustees, annually reviews our strategic plan for achieving health equity.
- Our hospital senior leadership, including chief executives and the entire hospital board of trustees, annually review key performance indicators stratified by demographic and/or social factors.

Y

Centers for Medicare & Medicaid Services (CMS) Social Drivers of Health (SDOH)

General acute care hospitals are required to report on rates of screenings and intervention rates among patients above 18 years old for five health related social needs (HRSN), which are food insecurity, housing instability, transportation problems, utility difficulties, and interpersonal safety. These rates are reported separately as being screened as positive for any of the five HRSNs, positive for each individual HRSN, and the intervention rate for each positively screened HRSN. For more information on the CMS SDOH, please visit the following link by copying and pasting the URL into your web browser:

<https://www.cms.gov/priorities/innovation/key-concepts/social-drivers-health-and-health-related-social-needs>

Number of patients admitted to an inpatient hospital stay who are 18 years or older on the date of admission and are screened for all of the five HRSN

0

Total number of patients who are admitted to a hospital inpatient stay and who are 18 years or older on the date of admission

0

Rate of patients admitted for an inpatient hospital stay who are 18 years or older on the date of admission, were screened for an HRSN, and who screened positive for one or more of the HRSNs

0

Table 2. Positive screening rates and intervention rates for the five Health Related Social Needs of the Centers of Medicare & Medicaid Services (CMS) Social Drivers of Health (SDOH).

Social Driver of Health	Number of positive screenings	Rate of positive screenings (%)	Number of positive screenings who received intervention	Rate of positive screenings who received intervention (%)
Food Insecurity				
Housing Instability				
Transportation Problems				
Utility Difficulties				
Interpersonal Safety				

Core Quality Measures for General Acute Care Hospitals

There are two quality measures from the Hospital Consumer Assessment of Healthcare Providers and Systems (HCAHPS) survey. For more information on the HCAHPS survey, please visit the following link by copying and pasting the URL into your web browser:

<https://hcahpsonline.org/en/survey-instruments/>

Patient Recommends Hospital

The first HCAHPS quality measure is the percentage of patients who would recommend the hospital to friends and family. For this measure, general acute care hospitals provide the percentage of patient respondents who responded "probably yes" or "definitely yes" to whether they would recommend the hospital, the percentage of the people who responded to the survey (i.e., the response rate), and the inputs for the percentages. The percentages and inputs are stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding HCAHPS question number is 19.

Number of respondents who replied "probably yes" or "definitely yes" to HCAHPS Question 19, "Would you recommend this hospital to your friends and family?"

NA

Total number of respondents to HCAHPS Question 19

NA

Percentage of total respondents who responded "probably yes" or "definitely yes" to HCAHPS Question 19

NA

Total number of people surveyed on HCAHPS Question 19

NA

Response rate, or the percentage of people who responded to HCAHPS Question 19

NA

Table 3. Patient recommends hospital by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

Race and/or Ethnicity	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
American Indian or Alaska Native					
Asian					
Black or African American					
Hispanic or Latino					
Middle Eastern or North African					
Multiracial and/or Multiethnic (two or more races)					
Native Hawaiian or Pacific Islander					
White					

Age	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Age < 18					
Age 18 to 34					
Age 35 to 49					
Age 50 to 64					
Age 65 Years and Older					

Sex assigned at birth	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Female					
Male					
Unknown					

Payer Type	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Medicare					
Medicaid					
Private					
Self-Pay					
Other					

Preferred Language	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
English Language					
Spanish Language					
Asian Pacific Islander Languages					
Middle Eastern Languages					
American Sign Language					
Other/Unknown Languages					

Disability Status	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Does not have a disability					
Has a mobility disability					
Has a cognition disability					
Has a hearing disability					
Has a vision disability					
Has a self-care disability					
Has an independent living disability					

Sexual Orientation	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Lesbian, gay or homosexual					
Straight or heterosexual					
Bisexual

Male					
Male-to-female (MTF)/ transgender female/trans woman					
Non-conforming gender					
Additional gender category or other					
Not disclosed					

Patient Received Information in Writing

The second HCAHPS quality measure is the percentage of patients who reported receiving information in writing on symptoms and health problems to look out for after leaving the hospital. General acute care hospitals are required to provide the percentage of patient respondents who responded "yes" to being provided written information, the percentage of the people who responded to the survey (i.e., the response rate), and the inputs for these percentages. These percentages and inputs are stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding HCAHPS question number is 17.

Number of respondents who replied "yes" to HCAHPS Question 17, "During this hospital stay, did you get information in writing about what symptoms or health problems to look out for after you left the

hospital?"

NA
Total number of respondents to HCAHPS Question 17
NA

Percentage of respondents who responded "yes" to HCAHPS Question 17
NA

Total number of people surveyed on HCAHPS Question 17
NA

Response rate, or the percentage of people who responded to HCAHPS Question 17
NA

Table 4. Patient reports receiving information in writing about symptoms or health problems by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

Race and/or Ethnicity	Number of "yes" responses	Total number of responses	Percentage of "yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
American Indian or Alaska Native					
Asian					
Black or African American					
Hispanic or Latino

Agency for Healthcare Research and Quality (AHRQ) Indicators

General acute care hospitals are required to report on two indicators from the Agency for Healthcare Research and Quality (AHRQ). For general information about AHRQ indicators, please visit the following link by copying and pasting the URL into your web browser:

<https://qualityindicators.ahrq.gov/>

Pneumonia Mortality Rate

The Pneumonia Mortality Rate is defined as the rate of in-hospital deaths per 1,000 hospital discharges with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission for patients ages 18 years and older. General acute care hospitals report the Pneumonia Mortality Rate by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding AHRQ Inpatient Quality Indicator is 20. For more information about this indicator, please visit the following link by copying and pasting the URL into your web browser:

https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_20_Pneumonia_Mortality_Rate.pdf

Death Rate among Surgical Inpatients with Serious Treatable Complications

The Death Rate among Surgical Inpatients with Serious Treatable Complications is defined as the rate of in-hospital deaths per 1,000 surgical discharges among patients ages 18-89 years old or obstetric patients with serious treatable complications. General acute care hospitals report this measure by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding AHRQ Patient Safety Indicator is 04. For more information about this indicator, please visit the following link by copying and pasting the URL into your web browser:

California Maternal Quality Care Collaborative (CMQCC) Core Quality Measures

There are three core quality maternal measures adopted from the California Maternal Quality Care Collaborative (CMQCC).

CMQCC Nulliparous, Term, Singleton, Vertex (NTSV) Cesarean Birth Rate

The CMQCC Nulliparous, Term, Singleton, Vertex (NTSV) Cesarean Birth Rate is defined as nulliparous women with a term (at least 37 weeks gestation), singleton baby in a vertex position delivered by cesarian birth. General acute care hospitals report the NTSV Cesarean Birth Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. For more information, please visit the following link by copying and pasting the URL into your web browser:

<https://www.cmqcc.org/quality-improvement-toolkits/supporting-vaginal-birth/ntsv-cesarean-birth-measure-specifications>

CMQCC Vaginal Birth After Cesarean (VBAC) Rate

The CMQCC Vaginal Birth After Cesarean (VBAC) Rate is defined as vaginal births per 1,000 deliveries by patients with previous Cesarean deliveries. General acute care hospitals report the VBAC Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The VBAC Rate uses the specifications of AHRQ Inpatient Quality Indicator 22. For more information, please visit the following link by copying and pasting the URL into your web browser:

[https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_22_Vaginal_Birth_After_Cesarean_\(VBAC\)_Delivery_Rate_Uncomplicated.pdf](https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_22_Vaginal_Birth_After_Cesarean_(VBAC)_Delivery_Rate_Uncomplicated.pdf)

CMQCC Exclusive Breast Milk Feeding Rate

The CMQCC Exclusive Breast Milk Feeding Rate is defined as the newborns per 100 who reached at least 37 weeks of gestation (or 3000g if gestational age is missing) who received breast milk

exclusively during their stay at the hospital. Other criteria are that the newborns did not go to the neonatal intensive care unit (NICU), transfer, or die, did not reflect multiple gestation, and did not have codes for parenteral nutrition or galactosemia. General acute care hospitals report the Exclusive Breast Milk Feeding Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The CMQCC Exclusive Breast Milk Feeding Rate uses the Joint Commission National Quality Measure PC-05. For more information, please visit the following link by copying and pasting the URL into your web browser:
<https://manual.jointcommission.org/releases/TJC2024B/MIF0170.html>

Number of newborn cases that were exclusively fed breast milk during their hospital stay and meet the inclusion and exclusion criteria

NA

Total number of newborn cases born in the hospital that meet the inclusion and exclusion criteria

NA

Rate of newborn cases per 100 that were exclusively fed breast milk during their hospital stay and meet the inclusion and exclusion criteria

NA

HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate

General acute care hospitals are required to report several HCAI All-Cause Unplanned 30-Day Hospital Readmission Rates, which are broadly defined as the percentage of hospital-level, unplanned, all-cause readmissions after admission for eligible conditions within 30 days of hospital discharge for patients aged 18 years and older. These rates are first stratified based on any eligible condition, mental health disorders, substance use disorders, co-occurring disorders, and no behavioral health diagnosis. Then, each condition-stratified hospital readmission rate is further stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. For more information on the HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate, please visit the following link by copying and pasting the URL into your web browser:

https://hcai.ca.gov/wp-content/uploads/2024/10/HCAI-All-Cause-Readmission-Rate-Exclusions_ADA.pdf

Health Equity Plan

All general acute care hospitals report a health equity plan that identifies the top 10 disparities and a written plan to address them.

Top 10 Disparities

Disparities for each hospital equity measure are identified by comparing the rate ratios by stratification groups. Rate ratios are calculated differently for measures with preferred low rates and those with preferred high rates. Rate ratios are calculated after applying the California Health and Human Services Agency's "Data De-Identification Guidelines (DDG)," dated September 23, 2016.

Table 15. Top 10 disparities and their rate ratio values.

Measures	Stratifications	Stratification Group	Stratification Rate	Reference Group	Reference Rate	Rate Ratio

Plan to address disparities identified in the data

After calculating each stratification and given the DDG guidelines for suppression rules, we were not able to identify any disparities.

Performance in the priority area

General acute care hospitals are required to provide hospital equity plans that address the top 10 disparities by identifying population impact and providing measurable objectives and specific timeframes. For each disparity, hospital equity plans will address performance across priority areas: person-centered care, patient safety, addressing patient social drivers of health, effective treatment, care coordination, and access to care.

Person-centered care

Seneca Healthcare District is committed to person-centered care, ensuring every patient experience is guided by safety, communication, and respect for individual preferences.

Key Achievements

- High patient satisfaction in communication with doctors and nurses, overall experience, quietness of hospital environment, and hospital cleanliness (HCAHPS).
- Multilingual services, including interpreter phone services, to improve accessibility.
- Shared decision-making practices, especially in acute and chronic care.
- Equitable care through financial assistance and culturally tailored services.

Areas for Growth

- More fully integrating patient feedback and clear communication into care planning. This includes communication related to medications and care transitions. There is a significant lack of home care, hospice, and DME in our rural/frontier area.
- Expanding access for underrepresented populations.

Patient Safety: Patient safety remains a top priority at Seneca Healthcare District.

- Low rates of hospital-acquired infections, with strict adherence to CDC protocols.
- Participation in quality and safety reporting programs such as CMS.
- Continuous review of medication-related events and "near-misses" through our Pharmacy and Therapeutics Committee.
- Ongoing staff education in infection control, fall prevention, and medical safety.
- Continuing patient feedback monitoring through HCAHPS and National Research Center (NRC).

Looking Ahead

By combining compassionate care with a focus on quality and equity, Seneca Healthcare District

continues to strengthen its role as a trusted partner in health and healing.

Patient safety

The patient safety priority in Seneca hospital focuses on preventing harm to patients during care. It's all about designing systems and practices that minimize errors, catch problems early, and create a culture where safety is everyone's responsibility. Here's a detailed breakdown:

Definition and Goal

- Definition: Patient safety is the prevention of avoidable harm to patients and the reduction of risk in healthcare delivery.
- Goal: Ensure patients receive the right care, at the right time, in the right way — without unintended injury, infection, or error.

Core Elements

- Error Prevention: Identifying risks before they cause harm (e.g., medication reconciliation, surgical checklists).
- Harm Reduction: Learning from adverse events and near-misses to stop recurrence.
- Standardization: Using evidence-based protocols to reduce variation in care.
- Safety Culture: Encouraging staff to speak up, report concerns, and continuously improve.

Common Focus Areas

- Medication safety — preventing dosing errors, drug interactions, or mislabeling.
- Infection control — reducing hospital-acquired infections (HAIs) like sepsis or pneumonia.
- Procedure verification — "time-outs" before surgery to confirm patient, site, and procedure.
- Fall prevention — minimizing patient falls through screening and monitoring.
- Diagnostic accuracy — improving tests, documentation, and follow-up to avoid misdiagnosis.

Performance Measurement

- Key indicators:
 - o Adverse events; calls to 911
 - January 2025 to August 2025 — 9 calls to 911 for staff protection. This resulted in 3 arrests, one 5150
 - o Hospital-acquired infections
 - o Medication errors
 - o Falls
 - o Readmissions
 - o Mortality
 - o Injury / accidents
- Benchmarking: comparing performance against national safety standards (e.g., Joint Commission, Leapfrog, CMS quality metrics).
- Continuous improvement: using root cause analysis, audits, and quality improvement projects.

Ultimate Purpose

A strong focus on patient safety improves trust, patient outcomes, and organizational reputation, while also reducing costs of preventable harm.

Addressing patient social drivers of health

In 2024, we began screening admitted inpatients using the WellRX Questionnaire. Our completion rate for 2024 was 36% since we did not begin screening until mid-year. Rates have continued to

improve since adopting the process. Our Medicare and Medi-Cal populations have experienced unmet needs with transportation, utility difficulties and interpersonal safety. In those circumstances, our care coordination nurses are able to provide patients with a list of community resources and send referrals as needed.

Performance in the priority area continued

Performance across all of the following priority areas.

Effective treatment

Seneca Healthcare District demonstrates solid performance in delivering effective treatment by:

- Adhering to evidence-based clinical guidelines for chronic diseases like diabetes and heart failure.
- Maintaining positive outcomes in surgical care with low to zero surgical site infections.
- Monitoring emergency department visits and reducing readmission rates by establishing our community with primary care providers.
- Utilizing electronic health records (EHR) to support care coordination and clinical decision-making.
- Providing patient education to support adherence and self-management.
- Ongoing efforts focused on expanding preventive care services and further reducing variability in treatment outcomes across patient populations.

Care coordination

Care Coordination – Addressing Social Determinants of Health

Seneca Healthcare District recognizes that effective care coordination must extend beyond clinical transitions to address the broader social factors impacting patient health. While disparities were not identified due to data suppression rules, our team remains committed to integrating equity-focused practices into care coordination efforts.

Overview

Care coordination at Seneca Healthcare District ensures that patients receive seamless, continuous care across settings. This includes transitions from inpatient to outpatient care, referrals to specialists, and connections to community resources. Seneca participates in two HIE's allowing seamless transition of patient information.

Equity Considerations

We understand that social determinants such as housing instability, food insecurity, and transportation barriers can significantly affect a patient's ability to follow through with care plans. Our coordination efforts aim to mitigate these challenges, especially for vulnerable populations.

Programs & Practices

- SDOH Screening: Patients are screened for key social needs using standardized tools during admission and discharge planning.
- Community Referrals: Patients with identified needs are referred to local services, including housing support, food banks, and transportation assistance.
- Telehealth Expansion: To improve access for rural patients, we've expanded telehealth services and offer technical support for setup and use.

Community Partnerships

We collaborate with local organizations such as Plumas & Lassen County Social Services, Chester Wellness Center, and food distribution networks to ensure patients receive timely support beyond the hospital setting.

Access to care

Performance Summary—Access to Patient Care

Access to patient care is a key indicator of Seneca Healthcare District's ability to provide timely, coordinated, and equitable health services. This includes access across the continuum of care—primary care providers, our walk-in clinic, specialty services, and the emergency department. Performance in this area directly impacts patient outcomes, satisfaction, and overall system efficiency.

Primary Care Providers

Access to primary care remains fundamental to effective population health management. Performance at Seneca Healthcare District (SHD) is assessed through appointment availability, patient-to-provider ratios, and follow-up after hospital or emergency department visits. Strong performance is reflected in timely scheduling of routine and same-week (sometimes same-day) appointments, consistent provider-patient relationships, and proactive care coordination that reduces avoidable emergency room utilization.

Walk-In Clinic

SHD provides a Walk-in clinic option, Monday through Friday, which supports timely access for patients with non-emergent needs. Our performance in this area is demonstrated through careful examination of our operating hours, minimal wait times, patient satisfaction, and quality of care. This service alleviates pressure on our emergency department while maintaining continuity of care and effective communication with our primary care teams.

Specialty Providers

Timely access to specialty care is critical to managing complex health needs. Performance measures include referral processing times, wait periods for initial specialist consultations, and coordination of care between referring and specialty providers. Optimal performance is continually examined to ensure that our patients are receiving appropriate specialty services without undue delay.

Emergency Department

Our Emergency Department is considered a safety net and reflects SHD's capacity to respond effectively to urgent and emergent patient needs. Key indicators include triage-to-provider times, overall length of stay, and patient throughput efficiency. Critical cases are prioritized appropriately, wait times are minimized, and unnecessary emergency utilization, including unnecessary diagnostics, are reduced through provision of alternative access points.

Methodology Guidelines

Did the hospital follow the methodology in the Measures Submission Guide? (Y/N)

Y
