

# Hospital Equity Measures Report

## General Information

Report Type:	Hospital Equity Measures Report
Year:	2024
Hospital Name:	COAST PLAZA HOSPITAL
Facility Type:	General Acute Care Hospital
Hospital HCAI ID:	106190766
Report Period:	01/01/2024 - 12/31/2024
Status:	Complete
Due Date:	11/29/2025
Last Updated:	01/23/2026
Hospital Location with Clean Water and Air:	Y
Hospital Web Address for Equity Report:	<a href="http://www.coastplazahospital.com">www.coastplazahospital.com</a>

## Overview

Assembly Bill No. 1204 requires the Department of Health Care Access and Information (HCAI) to develop and administer a Hospital Equity Measures Reporting Program to collect and post summaries of key hospital performance and patient outcome data regarding sociodemographic information, including but not limited to age, sex, race/ethnicity, payor type, language, disability status, and sexual orientation and gender identity.

Hospitals (general acute, children's, and acute psychiatric) and hospital systems are required to annually submit their reports to HCAI. These reports contain summaries of each measure, the top 10 disparities, and the equity plans to address the identified disparities. HCAI is required to maintain a link on the HCAI website that provides access to the content of hospital equity measures reports and equity plans to the public. All submitted hospitals are required to post their reports on their websites, as well.

## Laws and Regulations

For more information on Assembly Bill No. 1204, please visit the following link by copying and pasting the URL into your web browser:

[https://leginfo.legislature.ca.gov/faces/billTextClient.xhtml?bill\\_id=202120220AB1204](https://leginfo.legislature.ca.gov/faces/billTextClient.xhtml?bill_id=202120220AB1204)

## Hospital Equity Measures

### Joint Commission Accreditation

General acute care hospitals are required to report three structural measures based on the Commission Accreditation's Health Care Disparities Reduction and Patient-Centered Communication Accreditation Standards. For more information on these measures, please visit the following link by copying and pasting the URL into your web browser:

<https://www.jointcommission.org/standards/r3-report/r3-report-issue-36-new-requirements-to-reduce-health-care-disparities/>

The first two structural measures are scored as "yes" or "no"; the third structural measure comprises the percentages of patients by five categories of preferred languages spoken, in addition to one other/unknown language category.

Designate an individual to lead hospital health equity activities (Y = Yes, N = No).

Y

Provide documentation of policy prohibiting discrimination (Y = Yes, N = No).

Y

Number of patients that were asked their preferred language, five defined categories and one other/unknown languages category.

14677

Table 1. Summary of preferred languages reported by patients.

Languages	Number of patients who report preferring language	Total number of patients	Percentage of total patients who report preferring language (%)
English Language	11828	14677	80.6
Spanish Language	2699	14677	18.4
Asian Pacific Islander Languages	63	14677	0.4
Middle Eastern Languages	Suppressed	14677	Suppressed
American Sign Language	Suppressed	14677	Suppressed
Other Languages	79	14677	0.5

**Centers for Medicare & Medicaid Services (CMS) Hospital Commitment to Health Equity Structural (HCHE) Measure**

There are five domains that make up the CMS Hospital Commitment to HCHE measures. Each domain is scored as "yes" or "no." In order to score "yes," a general acute care hospital is required to confirm all the domain's attestations. Lack of one or more of the attestations results in a score of "no." For more information on the CMS Hospital Commitment to HCHE measures, please visit the following link by copying and pasting the URL into your web browser:  
<https://data.cms.gov/provider-data/topics/hospitals/health-equity>

**Centers for Medicare & Medicaid Services (CMS) Hospital Commitment to Health Equity Structural (HCHE) Measure Domain 1: Strategic Planning (Yes/No)**

- Our hospital strategic plan identifies priority populations who currently experience health disparities.
- Our hospital strategic plan identifies healthcare equity goals and discrete action steps to achieve these goals.
- Our hospital strategic plan outlines specific resources that have been dedicated to achieving our equity goals.
- Our hospital strategic plan describes our approach for engaging key stakeholders, such as community-based organizations.

Y

**CMS HCHE Measure Domain 2: Data Collection (Yes/No)**

- Our hospital strategic plan identifies healthcare equity goals and discrete action steps to achieve these goals.
- Our hospital has training for staff in culturally sensitive collection of demographics and/or social determinant of health information.

- Our hospital inputs demographic and/or social determinant of health information collected from patients into structured, interoperable data elements using a certified electronic health record (EHR) technology.

Y

#### CMS HCHE Measure Domain 3: Data Analysis (Yes/No)

- Our hospital stratifies key performance indicators by demographic and/or social determinants of health variables to identify equity gaps and includes this information in hospital performance dashboards.

Y

#### CMS HCHE Measure Domain 4: Quality Improvement (Yes/No)

- Our hospital participates in local, regional or national quality improvement activities focused on reducing health disparities.

Y

#### CMS HCHE Measure Domain 5: Leadership Engagement (Yes/No)

- Our hospital senior leadership, including chief executives and the entire hospital board of trustees, annually reviews our strategic plan for achieving health equity.
- Our hospital senior leadership, including chief executives and the entire hospital board of trustees, annually review key performance indicators stratified by demographic and/or social factors.

Y

### **Centers for Medicare & Medicaid Services (CMS) Social Drivers of Health (SDOH)**

General acute care hospitals are required to report on rates of screenings and intervention rates among patients above 18 years old for five health related social needs (HRSN), which are food insecurity, housing instability, transportation problems, utility difficulties, and interpersonal safety. These rates are reported separately as being screened as positive for any of the five HRSNs, positive for each individual HRSN, and the intervention rate for each positively screened HRSN. For more information on the CMS SDOH, please visit the following link by copying and pasting the URL into your web browser:

<https://www.cms.gov/priorities/innovation/key-concepts/social-drivers-health-and-health-related-social-needs>

Number of patients admitted to an inpatient hospital stay who are 18 years or older on the date of admission and are screened for all of the five HRSN

393

Total number of patients who are admitted to a hospital inpatient stay and who are 18 years or older on the date of admission

2297

Rate of patients admitted for an inpatient hospital stay who are 18 years or older on the date of admission, were screened for an HRSN, and who screened positive for one or more of the HRSNs

17.1

Table 2. Positive screening rates and intervention rates for the five Health Related Social Needs of the Centers of Medicare & Medicaid Services (CMS) Social Drivers of Health (SDOH).

<b>Social Driver of Health</b>	<b>Number of positive screenings</b>	<b>Rate of positive screenings (%)</b>	<b>Number of positive screenings who received intervention</b>	<b>Rate of positive screenings who received intervention (%)</b>
<b>Food Insecurity</b>	113	28.8		
<b>Housing Instability</b>	128	32.6		
<b>Transportation Problems</b>	101	25.7		
<b>Utility Difficulties</b>	105	26.7		
<b>Interpersonal Safety</b>	Suppressed	Suppressed		

## Core Quality Measures for General Acute Care Hospitals

There are two quality measures from the Hospital Consumer Assessment of Healthcare Providers and Systems (HCAHPS) survey. For more information on the HCAHPS survey, please visit the following link by copying and pasting the URL into your web browser:

<https://hcahpsonline.org/en/survey-instruments/>

## Patient Recommends Hospital

The first HCAHPS quality measure is the percentage of patients who would recommend the hospital to friends and family. For this measure, general acute care hospitals provide the percentage of patient respondents who responded "probably yes" or "definitely yes" to whether they would recommend the hospital, the percentage of the people who responded to the survey (i.e., the response rate), and the inputs for the percentages. The percentages and inputs are stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding HCAHPS question number is 19.

Number of respondents who replied "probably yes" or "definitely yes" to HCAHPS Question 19, "Would you recommend this hospital to your friends and family?"

90

Total number of respondents to HCAHPS Question 19

135

Percentage of total respondents who responded "probably yes" or "definitely yes" to HCAHPS Question 19

66.7

Total number of people surveyed on HCAHPS Question 19

140

Response rate, or the percentage of people who responded to HCAHPS Question 19

96.4

Table 3. Patient recommends hospital by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

Race and/or Ethnicity	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
American Indian or Alaska Native	Suppressed	Suppressed	Suppressed		
Asian	15	17	88.2		
Black or African American	Suppressed	Suppressed	Suppressed

<b>Gender Identity</b>	<b>Number of "probably yes" or "definitely yes" responses</b>	<b>Total number of responses</b>	<b>Percent of "probably yes" or "definitely yes" responses (%)</b>	<b>Total number of patients surveyed</b>	<b>Response rate of patients surveyed (%)</b>
Female					
Female-to-male (FTM)/ transgender male/trans man					
Male					
Male-to-female (MTF)/ transgender female/trans					
Non-conforming gender					
Additional gender category or other					
Not disclosed					

## Patient Received Information in Writing

The second HCAHPS quality measure is the percentage of patients who reported receiving information in writing on symptoms and health problems to look out for after leaving the hospital. General acute care hospitals are required to provide the percentage of patient respondents who responded "yes" to being provided written information, the percentage of the people who responded to the survey (i.e., the response rate), and the inputs for these percentages. These percentages and inputs are stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding HCAHPS question number is 17.

Number of respondents who replied "yes" to HCAHPS Question 17, "During this hospital stay, did you get information in writing about what symptoms or health problems to look out for after you left the

hospital?"

89

Total number of respondents to HCAHPS Question 17

115

Percentage of respondents who responded "yes" to HCAHPS Question 17

77.4

Total number of people surveyed on HCAHPS Question 17

140

Response rate, or the percentage of people who responded to HCAHPS Question 17

82.1

Table 4. Patient reports receiving information in writing about symptoms or health problems by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

## Agency for Healthcare Research and Quality (AHRQ) Indicators

General acute care hospitals are required to report on two indicators from the Agency for Healthcare Research and Quality (AHRQ). For general information about AHRQ indicators, please visit the following link by copying and pasting the URL into your web browser:  
<https://qualityindicators.ahrq.gov/>

### Pneumonia Mortality Rate

The Pneumonia Mortality Rate is defined as the rate of in-hospital deaths per 1,000 hospital discharges with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission for patients ages 18 years and older. General acute care hospitals report the Pneumonia Mortality Rate by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding AHRQ Inpatient Quality Indicator is 20. For more information about this indicator, please visit the following link by copying and pasting the URL into your web browser:  
[https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI\\_20\\_Pneumonia\\_Mortality\\_Rate.pdf](https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_20_Pneumonia_Mortality_Rate.pdf)

# Death Rate among Surgical Inpatients with Serious Treatable Complications

The Death Rate among Surgical Inpatients with Serious Treatable Complications is defined as the rate of in-hospital deaths per 1,000 surgical discharges among patients ages 18-89 years old or obstetric patients with serious treatable complications. General acute care hospitals report this measure by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding AHRQ Patient Safety Indicator is 04. For more information about this indicator, please visit the following link by copying and pasting the URL into your web browser:

[https://qualityindicators.ahrq.gov/Downloads/Modules/PSI/V2023/TechSpecs/PSI\\_04\\_Death\\_Rate\\_among\\_Surgical\\_Inpatients\\_with\\_Serious\\_Treatable\\_Complications.pdf](https://qualityindicators.ahrq.gov/Downloads/Modules/PSI/V2023/TechSpecs/PSI_04_Death_Rate_among_Surgical_Inpatients_with_Serious_Treatable_Complications.pdf)

## California Maternal Quality Care Collaborative (CMQCC) Core Quality Measures

There are three core quality maternal measures adopted from the California Maternal Quality Care Collaborative (CMQCC).

### CMQCC Nulliparous, Term, Singleton, Vertex (NTSV) Cesarean Birth Rate

The CMQCC Nulliparous, Term, Singleton, Vertex (NTSV) Cesarean Birth Rate is defined as nulliparous women with a term (at least 37 weeks gestation), singleton baby in a vertex position delivered by cesarian birth. General acute care hospitals report the NTSV Cesarean Birth Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. For more information, please visit the following link by copying and pasting the URL into your web browser:

<https://www.cmqcc.org/quality-improvement-toolkits/supporting-vaginal-birth/ntsv-cesarean-birth-measure-specifications>

## CMQCC Vaginal Birth After Cesarean (VBAC) Rate

The CMQCC Vaginal Birth After Cesarean (VBAC) Rate is defined as vaginal births per 1,000 deliveries by patients with previous Cesarean deliveries. General acute care hospitals report the VBAC Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The VBAC Rate uses the specifications of AHRQ Inpatient Quality Indicator 22. For more information, please visit the following link by copying and pasting the URL into your web browser:

[https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI\\_22\\_Vaginal\\_Birth\\_After\\_Cesarean\\_\(VBAC\)\\_Delivery\\_Rate\\_Uncomplicated.pdf](https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_22_Vaginal_Birth_After_Cesarean_(VBAC)_Delivery_Rate_Uncomplicated.pdf)

Number of vaginal delivery among cases with previous Cesarean delivery that meet the inclusion and exclusion criteria

NA

Total number of birth discharges with previous Cesarean delivery that meet the inclusion and exclusion criteria

NA

Rate of vaginal delivery per 1,000 deliveries by patients with previous Cesarean deliveries

## CMQCC Exclusive Breast Milk Feeding Rate

The CMQCC Exclusive Breast Milk Feeding Rate is defined as the newborns per 100 who reached at least 37 weeks of gestation (or 3000g if gestational age is missing) who received breast milk

exclusively during their stay at the hospital. Other criteria are that the newborns did not go to the neonatal intensive care unit (NICU), transfer, or die, did not reflect multiple gestation, and did not have codes for parenteral nutrition or galactosemia. General acute care hospitals report the Exclusive Breast Milk Feeding Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The CMQCC Exclusive Breast Milk Feeding Rate uses the Joint Commission National Quality Measure PC-05. For more information, please visit the following link by copying and pasting the URL into your web browser: <https://manual.jointcommission.org/releases/TJC2024B/MIF0170.html>

Number of newborn cases that were exclusively fed breast milk during their hospital stay and meet the inclusion and exclusion criteria

NA

Total number of newborn cases born in the hospital that meet the inclusion and exclusion criteria

NA

Rate of newborn cases per 100 that were exclusively fed breast milk during their hospital stay and meet the inclusion and exclusion criteria

NA

## HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate

General acute care hospitals are required to report several HCAI All-Cause Unplanned 30-Day Hospital Readmission Rates, which are broadly defined as the percentage of hospital-level, unplanned, all-cause readmissions after admission for eligible conditions within 30 days of hospital discharge for patients aged 18 years and older. These rates are first stratified based on any eligible condition, mental health disorders, substance use disorders, co-occurring disorders, and no behavioral health diagnosis. Then, each condition-stratified hospital readmission rate is further stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. For more information on the HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate, please visit the following link by copying and pasting the URL into your web browser:

[https://hcai.ca.gov/wp-content/uploads/2024/10/HCAI-All-Cause-Readmission-Rate-Exclusions\\_ADA.pdf](https://hcai.ca.gov/wp-content/uploads/2024/10/HCAI-All-Cause-Readmission-Rate-Exclusions_ADA.pdf)

## HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate – Any Eligible Condition

Number of inpatient hospital admissions which occurs within 30 days of the discharge date of an eligible index admission and were 18 years or older at time of admission

193

Total number of patients who were admitted to the general acute care hospital and were 18 years or older at time of admission

1136

Rate of hospital-level, unplanned, all-cause readmissions after admission for any eligible condition within 30 days of hospital discharge for patients aged 18 and older

17

Table 10. HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate for any eligible condition by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

## Health Equity Plan

All general acute care hospitals report a health equity plan that identifies the top 10 disparities and a written plan to address them.

## Top 10 Disparities

Disparities for each hospital equity measure are identified by comparing the rate ratios by stratification groups. Rate ratios are calculated differently for measures with preferred low rates and those with preferred high rates. Rate ratios are calculated after applying the California Health and Human Services Agency's "Data De-Identification Guidelines (DDG)," dated September 23, 2016.

Table 15. Top 10 disparities and their rate ratio values.

Measures	Stratifications	Stratification Group	Stratification Rate	Reference Group	Reference Rate	Rate Ratio
Hospital Consumer Assessment of Healthcare Providers and Systems (HCAHPS) survey: Would recommend hospital.	Sex Assigned at Birth	Female	61.8	Male	72.9	1.2
Hospital Consumer Assessment of Healthcare Providers and Systems (HCAHPS) survey: Would recommend hospital.	Race and/or Ethnicity	White	59.1	Asian	88.2	1.5
Hospital Consumer Assessment of Healthcare Providers and Systems (HCAHPS) survey: Would recommend hospital.	Race and/or Ethnicity	Hispanic or Latino	71.1	Asian	88.2	1.2
HCAHPS survey: Received information and education	Age (excluding maternal measures)	65 and older	69.2	35 to 49	89.5	1.3
HCAHPS survey: Received information and education	Race and/or Ethnicity	Hispanic or Latino	80	Asian	92.9	1.2
HCAHPS survey: Received information and education	Race and/or Ethnicity	White	61.1	Asian	92.9	1.5
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Race and/or Ethnicity	Hispanic or Latino	17.0	Asian	13.1	1.3
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Race and/or Ethnicity	Black or African American	18.6	Asian	13.1	1.4
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Race and/or Ethnicity	White	18.2	Asian	13.1	1.4
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Age (excluding maternal measures)	65 and older	18.5	50 to 64	13.5	1.4

#### Plan to address disparities identified in the data

Coast Plaza Hospital will address the ten identified disparities through a coordinated, equity-focused improvement plan designed to strengthen communication, enhance patient education, standardize discharge practices, and improve care transitions across demographic groups. Key interventions include expanding culturally responsive communication, reinforcing AIDET and teach-back, implementing bilingual and literacy-sensitive education materials, and increasing caregiver involvement in discharge processes—particularly for older adults and racial/ethnic groups with lower experience scores. To reduce readmissions among Hispanic/Latino, Black or African American, White, and older adult populations, the hospital will enhance risk stratification workflows, expand pharmacist-involved medication reconciliation, encourage timely follow-up appointments, and provide targeted post-discharge care instructions for high-risk groups. Social needs screening, community partnerships, and care navigation support will help address underlying drivers of preventable readmissions. Through clear measurable objectives, routine leadership review, and standardized performance tracking, Coast Plaza Hospital will reduce disparities in patient experience, improve education and understanding of care plans, and strengthen equitable, safe, and coordinated care for all patients.

#### Performance in the priority area

General acute care hospitals are required to provide hospital equity plans that address the top 10 disparities by identifying population impact and providing measurable objectives and specific timeframes. For each disparity, hospital equity plans will address performance across priority areas:

person-centered care, patient safety, addressing patient social drivers of health, effective treatment, care coordination, and access to care.

#### Person-centered care

The disparities in “Would Recommend Hospital” scores—particularly among female patients and White and Hispanic/Latino patients compared with Asian patients—highlight opportunities to strengthen Coast Plaza Hospital’s person-centered care practices. These gaps suggest variation in how consistently staff communicate, establish trust, and deliver clear and empathetic interactions across demographic groups. Differences in expectations regarding responsiveness, information sharing, and emotional support contribute to lower satisfaction among certain populations. Addressing these disparities will require enhanced communication training, consistent use of AIDET and teach-back, and improved cultural responsiveness to ensure all patients feel respected, informed, and confident in their care experience.

#### Patient safety

The information and education disparities—especially among older adults and across multiple racial and ethnic groups—reflect safety risks related to incomplete understanding of treatments, medications, and discharge instructions. Coupled with elevated readmission rates among Hispanic/Latino, Black or African American, and White patients, as well as adults 65 and older, these patterns point to inconsistent transition-of-care processes that may jeopardize safe recovery at home. By standardizing patient teaching, improving medication reconciliation, and strengthening follow-up workflows, Coast Plaza Hospital can reduce preventable harm, enhance safety, and ensure patients are prepared to manage their health after discharge.

#### Addressing patient social drivers of health

The readmission disparities across racial/ethnic groups and older adult populations indicate that social drivers—such as transportation challenges, medication affordability, caregiver availability, language needs, and chronic disease burden—may be affecting patients’ ability to access, understand, and follow through with care. Hispanic/Latino and Black/African American patients, in particular, may experience structural barriers that hinder timely follow-up care and chronic disease management. Addressing these drivers through expanded screening, community partnerships, care navigation support, and referral pathways will be essential to improving health outcomes and reducing readmissions among these populations.

### **Performance in the priority area continued**

Performance across all of the following priority areas.

#### Effective treatment

Disparities in education and readmissions indicate variability in treatment effectiveness across age and racial/ethnic groups. Older adults, White patients, and Hispanic/Latino patients may not be receiving fully comprehensible education or adequate support to manage complex medication regimens and chronic conditions. Insufficient communication and inconsistent discharge practices can undermine adherence and lead to preventable complications. Strengthening medication teaching, ensuring caregiver-inclusive discharge processes, and integrating pharmacists and case management into transitions of care will improve treatment effectiveness and reduce potentially avoidable readmissions.

#### Care coordination

The concentration of readmission disparities—spanning Hispanic/Latino, Black/African American, White, and older adult groups—points to gaps in coordination between inpatient, outpatient, and

community care settings. Inconsistent scheduling of follow-up appointments, variation in the quality of discharge summaries, and insufficient post-discharge outreach contribute to fragmented care transitions. Enhanced coordination efforts, including early follow-up scheduling, high-risk care transition pathways, and structured communication between providers, will be key to improving continuity and reducing return visits for these populations.

#### Access to care

While direct access measures were not included among the disparities, the readmission patterns suggest underlying access issues, particularly for older adults and patients from Hispanic/Latino, Black/African American, and White populations. Challenges such as timely appointment availability, transportation barriers, limited caregiver support, and health literacy constraints may impede patients' ability to obtain necessary follow-up care. Improving navigation services, offering transportation support, and strengthening community outreach will help ensure patients across all demographic groups can access needed services, reducing disparities and improving overall outcomes.

### **Methodology Guidelines**

Did the hospital follow the methodology in the Measures Submission Guide? (Y/N)
