

# Hospital Equity Measures Report

## General Information

Report Type:	Hospital Equity Measures Report
Year:	2024
Hospital Name:	COLUSA MEDICAL CENTER
Facility Type:	General Acute Care Hospital
Hospital HCAI ID:	106060870
Report Period:	1/1/2024 - 12/31/2024
Status:	Submitted
Due Date:	11/29/2025
Last Updated:	03/11/2026
Hospital Location with Clean Water and Air:	Y
Hospital Web Address for Equity Report:	<a href="https://colusamedcenter.com/">https://colusamedcenter.com/</a>

## Overview

Assembly Bill No. 1204 requires the Department of Health Care Access and Information (HCAI) to develop and administer a Hospital Equity Measures Reporting Program to collect and post summaries of key hospital performance and patient outcome data regarding sociodemographic information, including but not limited to age, sex, race/ethnicity, payor type, language, disability status, and sexual orientation and gender identity.

Hospitals (general acute, children's, and acute psychiatric) and hospital systems are required to annually submit their reports to HCAI. These reports contain summaries of each measure, the top 10 disparities, and the equity plans to address the identified disparities. HCAI is required to maintain a link on the HCAI website that provides access to the content of hospital equity measures reports and equity plans to the public. All submitted hospitals are required to post their reports on their websites, as well.

## Laws and Regulations

For more information on Assembly Bill No. 1204, please visit the following link by copying and pasting the URL into your web browser:

[https://leginfo.legislature.ca.gov/faces/billTextClient.xhtml?bill\\_id=202120220AB1204](https://leginfo.legislature.ca.gov/faces/billTextClient.xhtml?bill_id=202120220AB1204)

## Hospital Equity Measures

### Joint Commission Accreditation

General acute care hospitals are required to report three structural measures based on the Commission Accreditation's Health Care Disparities Reduction and Patient-Centered Communication Accreditation Standards. For more information on these measures, please visit the following link by copying and pasting the URL into your web browser:

<https://www.jointcommission.org/standards/r3-report/r3-report-issue-36-new-requirements-to-reduce-health-care-disparities/>

The first two structural measures are scored as "yes" or "no"; the third structural measure comprises the percentages of patients by five categories of preferred languages spoken, in addition to one other/unknown language category.

Designate an individual to lead hospital health equity activities (Y = Yes, N = No).

Y

Provide documentation of policy prohibiting discrimination (Y = Yes, N = No).

Y

Number of patients that were asked their preferred language, five defined categories and one other/unknown languages category.

NA

Table 1. Summary of preferred languages reported by patients.

Languages	Number of patients who report preferring language	Total number of patients	Percentage of total patients who report preferring language (%)
English Language	599		
Spanish Language	28		
Asian Pacific Islander Languages	suppressed		
Middle Eastern Languages	0		
American Sign Language	0		
Other Languages	suppressed		

**Centers for Medicare & Medicaid Services (CMS) Hospital Commitment to Health Equity Structural (HCHE) Measure**

There are five domains that make up the CMS Hospital Commitment to HCHE measures. Each domain is scored as "yes" or "no." In order to score "yes," a general acute care hospital is required to confirm all the domain's attestations. Lack of one or more of the attestations results in a score of "no." For more information on the CMS Hospital Commitment to HCHE measures, please visit the following link by copying and pasting the URL into your web browser:  
<https://data.cms.gov/provider-data/topics/hospitals/health-equity>

**Centers for Medicare & Medicaid Services (CMS) Hospital Commitment to Health Equity Structural (HCHE) Measure Domain 1: Strategic Planning (Yes/No)**

- Our hospital strategic plan identifies priority populations who currently experience health disparities.
- Our hospital strategic plan identifies healthcare equity goals and discrete action steps to achieve these goals.
- Our hospital strategic plan outlines specific resources that have been dedicated to achieving our equity goals.
- Our hospital strategic plan describes our approach for engaging key stakeholders, such as community-based organizations.

N

**CMS HCHE Measure Domain 2: Data Collection (Yes/No)**

- Our hospital strategic plan identifies healthcare equity goals and discrete action steps to achieve these goals.
- Our hospital has training for staff in culturally sensitive collection of demographics and/or social determinant of health information.

- Our hospital inputs demographic and/or social determinant of health information collected from patients into structured, interoperable data elements using a certified electronic health record (EHR) technology.

N

#### CMS HCHE Measure Domain 3: Data Analysis (Yes/No)

- Our hospital stratifies key performance indicators by demographic and/or social determinants of health variables to identify equity gaps and includes this information in hospital performance dashboards.

Y

#### CMS HCHE Measure Domain 4: Quality Improvement (Yes/No)

- Our hospital participates in local, regional or national quality improvement activities focused on reducing health disparities.

Y

#### CMS HCHE Measure Domain 5: Leadership Engagement (Yes/No)

- Our hospital senior leadership, including chief executives and the entire hospital board of trustees, annually reviews our strategic plan for achieving health equity.
- Our hospital senior leadership, including chief executives and the entire hospital board of trustees, annually review key performance indicators stratified by demographic and/or social factors.

N

### **Centers for Medicare & Medicaid Services (CMS) Social Drivers of Health (SDOH)**

General acute care hospitals are required to report on rates of screenings and intervention rates among patients above 18 years old for five health related social needs (HRSN), which are food insecurity, housing instability, transportation problems, utility difficulties, and interpersonal safety. These rates are reported separately as being screened as positive for any of the five HRSNs, positive for each individual HRSN, and the intervention rate for each positively screened HRSN. For more information on the CMS SDOH, please visit the following link by copying and pasting the URL into your web browser:

<https://www.cms.gov/priorities/innovation/key-concepts/social-drivers-health-and-health-related-social-needs>

Number of patients admitted to an inpatient hospital stay who are 18 years or older on the date of admission and are screened for all of the five HRSN

166

Total number of patients who are admitted to a hospital inpatient stay and who are 18 years or older on the date of admission

805

Rate of patients admitted for an inpatient hospital stay who are 18 years or older on the date of admission, were screened for an HRSN, and who screened positive for one or more of the HRSNs

21

Table 2. Positive screening rates and intervention rates for the five Health Related Social Needs of the Centers of Medicare & Medicaid Services (CMS) Social Drivers of Health (SDOH).

Social Driver of Health	Number of positive screenings	Rate of positive screenings (%)	Number of positive screenings who received intervention	Rate of positive screenings who received intervention (%)
Food Insecurity	19	11.4		
Housing Instability	30	18.1		
Transportation Problems	21	12.7		
Utility Difficulties	12	7.2		
Interpersonal Safety	suppressed	suppressed		

## Core Quality Measures for General Acute Care Hospitals

There are two quality measures from the Hospital Consumer Assessment of Healthcare Providers and Systems (HCAHPS) survey. For more information on the HCAHPS survey, please visit the following link by copying and pasting the URL into your web browser:

<https://hcahpsonline.org/en/survey-instruments/>

## Patient Recommends Hospital

The first HCAHPS quality measure is the percentage of patients who would recommend the hospital to friends and family. For this measure, general acute care hospitals provide the percentage of patient respondents who responded "probably yes" or "definitely yes" to whether they would recommend the hospital, the percentage of the people who responded to the survey (i.e., the response rate), and the inputs for the percentages. The percentages and inputs are stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding HCAHPS question number is 19.

Number of respondents who replied "probably yes" or "definitely yes" to HCAHPS Question 19, "Would you recommend this hospital to your friends and family?"

14

Total number of respondents to HCAHPS Question 19

44

Percentage of total respondents who responded "probably yes" or "definitely yes" to HCAHPS Question 19

32

Total number of people surveyed on HCAHPS Question 19

489

Response rate, or the percentage of people who responded to HCAHPS Question 19

9

Table 3. Patient recommends hospital by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

Race and/or Ethnicity	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
American Indian or Alaska Native	suppressed	46	suppressed		
Asian	suppressed	46	suppressed		
Black or African American	suppressed	46	suppressed		
Hispanic or Latino	0	46			
Middle Eastern or North African	0	46			
Multiracial and/or Multiethnic (two or more races)	0	46			
Native Hawaiian or Pacific Islander	0	46			
White	39	46			

  

Age	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Age < 18	0				
Age 18 to 34	0				
Age 35 to 49	0				
Age 50 to 64	suppressed	46	suppressed		
Age 65 Years and Older	suppressed	46	suppressed		

  

Sex assigned at birth	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Female	25	46			
Male	21	46			
Unknown	0	0

Female-to-male (FTM)/ transgender male/trans man					
Male					
Male-to-female (MTF)/ transgender female/trans					
Non-conforming gender					
Additional gender category or other					
Not disclosed					

## Patient Received Information in Writing

The second HCAHPS quality measure is the percentage of patients who reported receiving information in writing on symptoms and health problems to look out for after leaving the hospital. General acute care hospitals are required to provide the percentage of patient respondents who responded "yes" to being provided written information, the percentage of the people who responded to the survey (i.e., the response rate), and the inputs for these percentages. These percentages and inputs are stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding HCAHPS question number is 17.

Number of respondents who replied "yes" to HCAHPS Question 17, "During this hospital stay, did you get information in writing about what symptoms or health problems to look out for after you left the

hospital?"

22

Total number of respondents to HCAHPS Question 17

34

Percentage of respondents who responded "yes" to HCAHPS Question 17

64

Total number of people surveyed on HCAHPS Question 17

378

Response rate, or the percentage of people who responded to HCAHPS Question 17

9

Table 4. Patient reports receiving information in writing about symptoms or health problems by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

## Agency for Healthcare Research and Quality (AHRQ) Indicators

General acute care hospitals are required to report on two indicators from the Agency for Healthcare Research and Quality (AHRQ). For general information about AHRQ indicators, please visit the following link by copying and pasting the URL into your web browser:  
<https://qualityindicators.ahrq.gov/>

### Pneumonia Mortality Rate

The Pneumonia Mortality Rate is defined as the rate of in-hospital deaths per 1,000 hospital discharges with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission for patients ages 18 years and older. General acute care hospitals report the Pneumonia Mortality Rate by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding AHRQ Inpatient Quality Indicator is 20. For more information about this indicator, please visit the following link by copying and pasting the URL into your web browser:  
[https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI\\_20\\_Pneumonia\\_Mortality\\_Rate.pdf](https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_20_Pneumonia_Mortality_Rate.pdf)

# Death Rate among Surgical Inpatients with Serious Treatable Complications

The Death Rate among Surgical Inpatients with Serious Treatable Complications is defined as the rate of in-hospital deaths per 1,000 surgical discharges among patients ages 18-89 years old or obstetric patients with serious treatable complications. General acute care hospitals report this measure by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding AHRQ Patient Safety Indicator is 04. For more information about this indicator, please visit the following link by copying and pasting the URL into your web browser:

[https://qualityindicators.ahrq.gov/Downloads/Modules/PSI/V2023/TechSpecs/PSI\\_04\\_Death\\_Rate\\_among\\_Surgical\\_Inpatients\\_with\\_Serious\\_Treatable\\_Complications.pdf](https://qualityindicators.ahrq.gov/Downloads/Modules/PSI/V2023/TechSpecs/PSI_04_Death_Rate_among_Surgical_Inpatients_with_Serious_Treatable_Complications.pdf)

## California Maternal Quality Care Collaborative (CMQCC) Core Quality Measures

There are three core quality maternal measures adopted from the California Maternal Quality Care Collaborative (CMQCC).

### CMQCC Nulliparous, Term, Singleton, Vertex (NTSV) Cesarean Birth Rate

The CMQCC Nulliparous, Term, Singleton, Vertex (NTSV) Cesarean Birth Rate is defined as nulliparous women with a term (at least 37 weeks gestation), singleton baby in a vertex position delivered by cesarian birth. General acute care hospitals report the NTSV Cesarean Birth Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. For more information, please visit the following link by copying and pasting the URL into your web browser:

<https://www.cmqcc.org/quality-improvement-toolkits/supporting-vaginal-birth/ntsv-cesarean-birth-measure-specifications>

## CMQCC Vaginal Birth After Cesarean (VBAC) Rate

The CMQCC Vaginal Birth After Cesarean (VBAC) Rate is defined as vaginal births per 1,000 deliveries by patients with previous Cesarean deliveries. General acute care hospitals report the VBAC Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The VBAC Rate uses the specifications of AHRQ Inpatient Quality Indicator 22. For more information, please visit the following link by copying and pasting the URL into your web browser:

[https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI\\_22\\_Vaginal\\_Birth\\_After\\_Cesarean\\_\(VBAC\)\\_Delivery\\_Rate\\_Uncomplicated.pdf](https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_22_Vaginal_Birth_After_Cesarean_(VBAC)_Delivery_Rate_Uncomplicated.pdf)

Number of vaginal delivery among cases with previous Cesarean delivery that meet the inclusion and exclusion criteria

0

Total number of birth discharges with previous Cesarean delivery that meet the inclusion and exclusion criteria

0

Rate of vaginal delivery per 1,000 deliveries by patients with previous Cesarean deliveries

0

## CMQCC Exclusive Breast Milk Feeding Rate

The CMQCC Exclusive Breast Milk Feeding Rate is defined as the newborns per 100 who reached at least 37 weeks of gestation (or 3000g if gestational age is missing) who received breast milk

exclusively during their stay at the hospital. Other criteria are that the newborns did not go to the neonatal intensive care unit (NICU), transfer, or die, did not reflect multiple gestation, and did not have codes for parenteral nutrition or galactosemia. General acute care hospitals report the Exclusive Breast Milk Feeding Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The CMQCC Exclusive Breast Milk Feeding Rate uses the Joint Commission National Quality Measure PC-05. For more information, please visit the following link by copying and pasting the URL into your web browser: <https://manual.jointcommission.org/releases/TJC2024B/MIF0170.html>

Number of newborn cases that were exclusively fed breast milk during their hospital stay and meet the inclusion and exclusion criteria

0

Total number of newborn cases born in the hospital that meet the inclusion and exclusion criteria

0

Rate of newborn cases per 100 that were exclusively fed breast milk during their hospital stay and meet the inclusion and exclusion criteria

0

## HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate

General acute care hospitals are required to report several HCAI All-Cause Unplanned 30-Day Hospital Readmission Rates, which are broadly defined as the percentage of hospital-level, unplanned, all-cause readmissions after admission for eligible conditions within 30 days of hospital discharge for patients aged 18 years and older. These rates are first stratified based on any eligible condition, mental health disorders, substance use disorders, co-occurring disorders, and no behavioral health diagnosis. Then, each condition-stratified hospital readmission rate is further stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. For more information on the HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate, please visit the following link by copying and pasting the URL into your web browser:

[https://hcai.ca.gov/wp-content/uploads/2024/10/HCAI-All-Cause-Readmission-Rate-Exclusions\\_ADA.pdf](https://hcai.ca.gov/wp-content/uploads/2024/10/HCAI-All-Cause-Readmission-Rate-Exclusions_ADA.pdf)

## HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate – Any Eligible Condition

Number of inpatient hospital admissions which occurs within 30 days of the discharge date of an eligible index admission and were 18 years or older at time of admission

28

Total number of patients who were admitted to the general acute care hospital and were 18 years or older at time of admission

197

Rate of hospital-level, unplanned, all-cause readmissions after admission for any eligible condition within 30 days of hospital discharge for patients aged 18 and older

14

## Health Equity Plan

All general acute care hospitals report a health equity plan that identifies the top 10 disparities and a written plan to address them.

## Top 10 Disparities

Disparities for each hospital equity measure are identified by comparing the rate ratios by stratification groups. Rate ratios are calculated differently for measures with preferred low rates and those with preferred high rates. Rate ratios are calculated after applying the California Health and Human Services Agency's "Data De-Identification Guidelines (DDG)," dated September 23, 2016.

Table 15. Top 10 disparities and their rate ratio values.

Measures	Stratifications	Stratification Group	Stratification Rate	Reference Group	Reference Rate	Rate Ratio

Plan to address disparities identified in the data

#### HCAHPS: Received Information - Race Disparities

Colusa Medical Center has a generally homogenous patient population; of our 77 HCAHPS responses, only 8 were non-white, and all 8 of these responses defined themselves as American Indian/Alaskan Native. Nonetheless, analysis demonstrated disparities among responses related to receiving information in a clinical setting. Only 25% of AIAN respondents attested "Yes" to the question, "I received information about symptoms and problems to look for", as compared to 54% of white respondents. In this vein, there were additional disparities related to staff communication: 87.5% of AIAN respondents reported that staff "Never" described medication side effects as opposed to 41.9% of white respondents; this is especially concerning, since AIAN respondents reported a 100% rate of taking new medications as compared to 71% of white respondents.

Colusa Medical Center acknowledges these disparities. We are currently developing a focused process improvement project related to HCAHPS measures. Staff communication with patients will be a key component of this project; and in recognition of the disparities identified through our Equity Measures Report, we will include a robust equity component to this project: with focused improvements in communicating with diverse patients.

#### HCAHPS: Received Information - Age Disparities

The nominal HCAHPS respondent at Colusa Medical Center is aged 65+. Patients aged 65+ reported generally good communication results: with 69.5% asserting that "Yes", they did receive satisfactory information about symptoms and problems to look out for. However, slightly younger respondents aged 50-64 had far worse rates, with only 12.5% responding "Yes" to receiving satisfactory information.

This is an unusual finding. Patients aged 50-64 also reported very low satisfaction with doctor-provided information (with 82.3% reporting scores of 1-25/100 on this measure, as compared to only 8.4% of patients aged 65+). This indicates general difficulties in communicating with this population.

It is possible that this finding is an artifact of other demographic intersections. The respondent population aged 50-64 was far more likely to be AIAN than respondents aged 65+ (35.29%, vs. 3.3%); in addition, they were more likely to be high school educated (70.59%, vs. 20.34%) , as opposed to college-educated (11.76%, vs. 22.0%).

Colusa Medical Center acknowledges this disparity. To best address this disparity, we will conduct further analysis on our patient population to determine the root cause of the low scores reported by patients aged 50-64. This will include an analysis of the intersections previously discussed. The goal of this analysis will be to review communication procedures, and to include additional guidelines for patients determined to be high-risk.

In addition, we are currently developing a set of performance improvement projects related to CMS's

Age-Friendly Care guidelines. Though this set of guidelines is only explicitly stated to be for patients aged 65+, if our intersectional analysis determines that the age range of 50-64 (rather than another demographic category) does in fact predict hospital outcomes more effectively than any other category, we will expand our Age-friendly Care program to include all patients aged 50+.

#### HCAHPS Would Recommend - Age Disparities

Related to the issues in communication, HCAHPS respondents aged 50-64 reported lower likelihoods of recommending our facility (53.0% vs 66.2%). This distinction, however, comes mostly from the "Definitely No" response: 11.8% of respondents aged 50-64 reported this score, as compared to only 1.7% of respondents aged 65+.

As a related figure: respondents aged 50-64 reported a lower overall satisfaction in complaint resolution, with 100% of their satisfaction scores falling within the middle "50" band. Patients aged 65+, by comparison, rated their satisfaction in complaint resolution in this "50" band or lower only 44.3% of the time--rating satisfaction in the upper "75" and "100" bands over the remainder of the time.

There is a likely relationship between the low satisfaction with complaint resolution and the likelihood of recommending our facility for this patient population. Colusa Medical Center has recently hired new quality department staff to address and resolve complaints, and is looking to improve its complaint and peer/department review process on an ongoing basis.

#### HCAHPS Would Recommend - Race Disparities

Race disparities in likelihood to recommend this facility indicate that although AIAN respondents received less clarity regarding their stay--they were nonetheless more likely to recommend the hospital than white respondents, with 87.5% asserting to recommend the facility, as compared to 43.4%. To improve patient satisfaction with care among the general population, any successful project trialed with a stratified population will be instated among all patients (if appropriate).

### **Performance in the priority area**

General acute care hospitals are required to provide hospital equity plans that address the top 10 disparities by identifying population impact and providing measurable objectives and specific timeframes. For each disparity, hospital equity plans will address performance across priority areas: person-centered care, patient safety, addressing patient social drivers of health, effective treatment, care coordination, and access to care.

#### Person-centered care

Colusa Medical Center is working to incorporate new data related to person-centered care. As part of this initiative, we are working to establish new procedures utilizing patient goal-setting; malnutrition screening; social support screening; access to transportation screening; and other metrics related to social determinants of health in the 2026 calendar year. Reports related to these metrics will be tracked, trended, and presented at quarterly quality meetings. When patients screen positive on any of these metrics, it is expected that this information be incorporated into course of care, including additional resources for patients at time of discharge. By cross-referencing these attributes against other social determinants of health, we can develop more robust findings to target

stratifications of our patient population.

#### Patient safety

Colusa Medical Center works to ensure a safe environment for all of our patients. In addition to physical environment rounding, we have recently hired a new infection control specialist. Quality will work in conjunction with infection control to ensure that any disparities related to hospital-acquired infections, sepsis, and exposure are tracked, trended, and reported out at quarterly meetings. We will accomplish this by collaborating with infection control to include demographic information in their data audits and reporting: providing technical assistance and support.

#### Addressing patient social drivers of health

As a rural facility, Colusa Medical Center understands that the patients that come to our door daily face social as well as medical challenges; and that these two concepts inform each other, daily. To this point, we have had limited ability to track and trend this kind of information; however, with new requirements related to patient goal-setting, malnutrition, social support, access to transportation, and other social determinants of health, we are looking to set up a robust dataset in the 2026 calendar year. As mentioned prior, each of our projects related to social determinants of health are expected to directly impact care and resources provided to our patients. We also recognize that as a member of the community, this medical center has the opportunity to directly improve patient lives by connecting them with resources and coordinating services. By ensuring that these procedures respond to the correct social determinants of health, we will help move the needle on these important issues.

### **Performance in the priority area continued**

Performance across all of the following priority areas.

#### Effective treatment

As mentioned prior, all of our social determinant of health initiatives are expected to inform patient care, as well as informational resources provided to the patient. If a patient triggers one of our screening tool, they will be made aware of our finding and receive consultation on how best to proceed. This ensures that our monitoring of equity-related data begins to be effective even at the stage of treatment. Furthermore, our review process in tracking and trending fallouts, incidents--in combination with a peer and department review process--will ensure that any opportunities for improvement in our care are addressed, catalogued, and reported for learnings.

#### Care coordination

Colusa Medical Center holds regular interdisciplinary team meetings in order to coordinate care for our patients. In addition, we are working to improve our reporting and dashboarding capabilities so that information related to our patients is available for our specialists at all times. Quarterly reports related to items of outcome equity will be discussed with all team members, including identified areas of improvement and new procedures. Our initiatives related to health equity are designed with the whole hospital in mind: starting at admission, extending throughout the course of care, and continuing even through information, resources, and external connections provided at discharge.

#### Access to care

As a rural facility, we understand that access to care is a large obstacle for our facility. We are currently seeking to address this by improving our understanding of our patient population: including rates of indigency and transportation barriers. As this understanding improves, we will develop targeted projects to coordinate resources and inform course of care--along with our other efforts related to social determinants of health.

**Methodology Guidelines**

Did the hospital follow the methodology in the Measures Submission Guide? (Y/N)
