

Hospital Equity Measures Report

General Information

Report Type:	Hospital Equity Measures Report
Year:	2024
Hospital Name:	PALOMAR MEDICAL CENTER POWAY
Facility Type:	General Acute Care Hospital
Hospital HCAI ID:	106370977
Report Period:	1/1/2024 - 12/31/2024
Status:	Complete
Due Date:	09/30/2025
Last Updated:	02/04/2026
Hospital Location with Clean Water and Air:	Y
Hospital Web Address for Equity Report:	www.palomarhealth.org

Overview

Assembly Bill No. 1204 requires the Department of Health Care Access and Information (HCAI) to develop and administer a Hospital Equity Measures Reporting Program to collect and post summaries of key hospital performance and patient outcome data regarding sociodemographic information, including but not limited to age, sex, race/ethnicity, payor type, language, disability status, and sexual orientation and gender identity.

Hospitals (general acute, children's, and acute psychiatric) and hospital systems are required to annually submit their reports to HCAI. These reports contain summaries of each measure, the top 10 disparities, and the equity plans to address the identified disparities. HCAI is required to maintain a link on the HCAI website that provides access to the content of hospital equity measures reports and equity plans to the public. All submitted hospitals are required to post their reports on their websites, as well.

Laws and Regulations

For more information on Assembly Bill No. 1204, please visit the following link by copying and pasting the URL into your web browser:

https://leginfo.legislature.ca.gov/faces/billTextClient.xhtml?bill_id=202120220AB1204

Hospital Equity Measures

Joint Commission Accreditation

General acute care hospitals are required to report three structural measures based on the Commission Accreditation's Health Care Disparities Reduction and Patient-Centered Communication Accreditation Standards. For more information on these measures, please visit the following link by copying and pasting the URL into your web browser:

<https://www.jointcommission.org/standards/r3-report/r3-report-issue-36-new-requirements-to-reduce>

-health-care-disparities/

The first two structural measures are scored as "yes" or "no"; the third structural measure comprises the percentages of patients by five categories of preferred languages spoken, in addition to one other/unknown language category.

Designate an individual to lead hospital health equity activities (Y = Yes, N = No).

Y

Provide documentation of policy prohibiting discrimination (Y = Yes, N = No).

Y

Number of patients that were asked their preferred language, five defined categories and one other/unknown languages category.

36173

Table 1. Summary of preferred languages reported by patients.

Languages	Number of patients who report preferring language	Total number of patients	Percentage of total patients who report preferring language (%)
English Language	32008	36173	88.5
Spanish Language	2640	36173	7.3
Asian Pacific Islander Languages	597	36173	1.7
Middle Eastern Languages	579	36173	1.6
American Sign Language	12	36173	0
Other Languages	326	36173	0.9

Centers for Medicare & Medicaid Services (CMS) Hospital Commitment to Health Equity Structural (HCHE) Measure

There are five domains that make up the CMS Hospital Commitment to HCHE measures. Each domain is scored as "yes" or "no." In order to score "yes," a general acute care hospital is required to confirm all the domain's attestations. Lack of one or more of the attestations results in a score of "no." For more information on the CMS Hospital Commitment to HCHE measures, please visit the following link by copying and pasting the URL into your web browser:

<https://data.cms.gov/provider-data/topics/hospitals/health-equity>

Centers for Medicare & Medicaid Services (CMS) Hospital Commitment to Health Equity Structural (HCHE) Measure Domain 1: Strategic Planning (Yes/No)

- Our hospital strategic plan identifies priority populations who currently experience health disparities.
- Our hospital strategic plan identifies healthcare equity goals and discrete action steps to achieve these goals.
- Our hospital strategic plan outlines specific resources that have been dedicated to achieving our equity goals.
- Our hospital strategic plan describes our approach for engaging key stakeholders, such as community-based organizations.

Y

CMS HCHE Measure Domain 2: Data Collection (Yes/No)

- Our hospital strategic plan identifies healthcare equity goals and discrete action steps to achieve these goals.

- Our hospital has training for staff in culturally sensitive collection of demographics and/or social determinant of health information.
- Our hospital inputs demographic and/or social determinant of health information collected from patients into structured, interoperable data elements using a certified electronic health record (EHR) technology.

Y

CMS HCHE Measure Domain 3: Data Analysis (Yes/No)

- Our hospital stratifies key performance indicators by demographic and/or social determinants of health variables to identify equity gaps and includes this information in hospital performance dashboards.

Y

CMS HCHE Measure Domain 4: Quality Improvement (Yes/No)

- Our hospital participates in local, regional or national quality improvement activities focused on reducing health disparities.

Y

CMS HCHE Measure Domain 5: Leadership Engagement (Yes/No)

- Our hospital senior leadership, including chief executives and the entire hospital board of trustees, annually reviews our strategic plan for achieving health equity.
- Our hospital senior leadership, including chief executives and the entire hospital board of trustees, annually review key performance indicators stratified by demographic and/or social factors.

Y

Centers for Medicare & Medicaid Services (CMS) Social Drivers of Health (SDOH)

General acute care hospitals are required to report on rates of screenings and intervention rates among patients above 18 years old for five health related social needs (HRSN), which are food insecurity, housing instability, transportation problems, utility difficulties, and interpersonal safety. These rates are reported separately as being screened as positive for any of the five HRSNs, positive for each individual HRSN, and the intervention rate for each positively screened HRSN. For more information on the CMS SDOH, please visit the following link by copying and pasting the URL into your web browser:

<https://www.cms.gov/priorities/innovation/key-concepts/social-drivers-health-and-health-related-social-needs>

Number of patients admitted to an inpatient hospital stay who are 18 years or older on the date of admission and are screened for all of the five HRSN

1155

Total number of patients who are admitted to a hospital inpatient stay and who are 18 years or older on the date of admission

13794

Rate of patients admitted for an inpatient hospital stay who are 18 years or older on the date of admission, were screened for an HRSN, and who screened positive for one or more of the HRSNs

8.4

Table 2. Positive screening rates and intervention rates for the five Health Related Social Needs of the Centers of Medicare & Medicaid Services (CMS) Social Drivers of Health (SDOH).

Social Driver of Health	Number of positive screenings	Rate of positive screenings (%)	Number of positive screenings who received intervention	Rate of positive screenings who received intervention (%)
Food Insecurity	17	1.5	0	0
Housing Instability	75	6.5	0	0
Transportation Problems	34	2.9	0	0
Utility Difficulties	11	1.0	0	0
Interpersonal Safety	11	1.0	0	0

Core Quality Measures for General Acute Care Hospitals

There are two quality measures from the Hospital Consumer Assessment of Healthcare Providers and Systems (HCAHPS) survey. For more information on the HCAHPS survey, please visit the following link by copying and pasting the URL into your web browser:

<https://hcahpsonline.org/en/survey-instruments/>

Patient Recommends Hospital

The first HCAHPS quality measure is the percentage of patients who would recommend the hospital to friends and family. For this measure, general acute care hospitals provide the percentage of patient respondents who responded "probably yes" or "definitely yes" to whether they would recommend the hospital, the percentage of the people who responded to the survey (i.e., the response rate), and the inputs for the percentages. The percentages and inputs are stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding HCAHPS question number is 19.

Number of respondents who replied "probably yes" or "definitely yes" to HCAHPS Question 19, "Would you recommend this hospital to your friends and family?"

482

Total number of respondents to HCAHPS Question 19

535

Percentage of total respondents who responded "probably yes" or "definitely yes" to HCAHPS Question 19

90.1

Total number of people surveyed on HCAHPS Question 19

2816

Response rate, or the percentage of people who responded to HCAHPS Question 19

19

Table 3. Patient recommends hospital by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

Race and/or Ethnicity	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
American Indian or Alaska Native					
Asian					
Black or African American					
Hispanic or Latino					
Middle Eastern or North African					
Multiracial and/or Multiethnic (two or more races)					
Native Hawaiian or Pacific Islander					
White					

Age	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Age < 18					
Age 18 to 34					
Age 35 to 49					
Age 50 to 64					
Age 65 Years and Older					

Sex assigned at birth	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Female					
Male					
Unknown					

Payer Type	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Medicare					
Medicaid					
Private					
Self-Pay					
Other					

Preferred Language	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
English Language					
Spanish Language					
Asian Pacific Islander Languages					
Middle Eastern Languages					
American Sign Language					
Other/Unknown Languages					

Disability Status	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Does not have a disability					
Has a mobility disability					
Has a cognition disability					
Has a hearing disability					
Has a vision disability					
Has a self-care disability					
Has an independent living disability					

Sexual Orientation	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Lesbian, gay or homosexual					
Straight or heterosexual					
Bisexual

Gender Identity	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Female					
Female-to-male (FTM)/ transgender male/trans man					
Male					
Male-to-female (MTF)/ transgender female/trans woman					
Non-conforming gender					
Additional gender category or other					
Not disclosed					

Patient Received Information in Writing

The second HCAHPS quality measure is the percentage of patients who reported receiving information in writing on symptoms and health problems to look out for after leaving the hospital. General acute care hospitals are required to provide the percentage of patient respondents who responded "yes" to being provided written information, the percentage of the people who responded to the survey (i.e., the response rate), and the inputs for these percentages. These percentages and inputs are stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding HCAHPS question number is 17.

Number of respondents who replied "yes" to HCAHPS Question 17, "During this hospital stay, did you get information in writing about what symptoms or health problems to look out for after you left the

hospital?"

455
Total number of respondents to HCAHPS Question 17
535

Percentage of respondents who responded "yes" to HCAHPS Question 17
85

Total number of people surveyed on HCAHPS Question 17
2816

Response rate, or the percentage of people who responded to HCAHPS Question 17
19

Table 4. Patient reports receiving information in writing about symptoms or health problems by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

Race and/or Ethnicity	Number of "yes" responses	Total number of responses	Percentage of "yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)

Agency for Healthcare Research and Quality (AHRQ) Indicators

General acute care hospitals are required to report on two indicators from the Agency for Healthcare Research and Quality (AHRQ). For general information about AHRQ indicators, please visit the following link by copying and pasting the URL into your web browser:

<https://qualityindicators.ahrq.gov/>

Pneumonia Mortality Rate

The Pneumonia Mortality Rate is defined as the rate of in-hospital deaths per 1,000 hospital discharges with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission for patients ages 18 years and older. General acute care hospitals report the Pneumonia Mortality Rate by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding AHRQ Inpatient Quality Indicator is 20. For more information about this indicator, please visit the following link by copying and pasting the URL into your web browser:

https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_20_Pneumonia_Mortality_Rate.pdf

Number of in-hospital deaths with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission

31

Total number of hospital discharges with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission

395

Rate of in-hospital deaths per 1,000 hospital discharges with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission

78.5

Table 5. Pneumonia Mortality Rate by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

Race and/or Ethnicity	Number of in-hospital deaths that meet the inclusion/exclusion criteria	Number of hospital discharges that meet the inclusion/exclusion criteria	Rate of in-hospital deaths per 1,000 hospital discharges that meet the inclusion/exclusion criteria (%)

Death Rate among Surgical Inpatients with Serious Treatable Complications

The Death Rate among Surgical Inpatients with Serious Treatable Complications is defined as the rate of in-hospital deaths per 1,000 surgical discharges among patients ages 18-89 years old or obstetric patients with serious treatable complications. General acute care hospitals report this measure by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding AHRQ Patient Safety Indicator is 04. For more information about this indicator, please visit the following link by copying and pasting the URL into your web browser:
https://qualityindicators.ahrq.gov/Downloads/Modules/PSI/V2023/TechSpecs/PSI_04_Death_Rate_among_Surgical_Inpatients_with_Serious_Treatable_Complications.pdf

California Maternal Quality Care Collaborative (CMQCC) Core Quality Measures

There are three core quality maternal measures adopted from the California Maternal Quality Care Collaborative (CMQCC).

CMQCC Nulliparous, Term, Singleton, Vertex (NTSV) Cesarean Birth Rate

The CMQCC Nulliparous, Term, Singleton, Vertex (NTSV) Cesarean Birth Rate is defined as nulliparous women with a term (at least 37 weeks gestation), singleton baby in a vertex position delivered by cesarian birth. General acute care hospitals report the NTSV Cesarean Birth Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. For more information, please visit the following link by copying and pasting the URL into your web browser:

<https://www.cmqcc.org/quality-improvement-toolkits/supporting-vaginal-birth/ntsv-cesarean-birth-measure-specifications>

CMQCC Vaginal Birth After Cesarean (VBAC) Rate

The CMQCC Vaginal Birth After Cesarean (VBAC) Rate is defined as vaginal births per 1,000 deliveries by patients with previous Cesarean deliveries. General acute care hospitals report the VBAC Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The VBAC Rate uses the specifications of AHRQ Inpatient Quality Indicator 22. For more information, please visit the following link by copying and pasting the URL into your web browser:

[https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_22_Vaginal_Birth_After_Cesarean_\(VBAC\)_Delivery_Rate_Uncomplicated.pdf](https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_22_Vaginal_Birth_After_Cesarean_(VBAC)_Delivery_Rate_Uncomplicated.pdf)

CMQCC Exclusive Breast Milk Feeding Rate

The CMQCC Exclusive Breast Milk Feeding Rate is defined as the newborns per 100 who reached at least 37 weeks of gestation (or 3000g if gestational age is missing) who received breast milk

exclusively during their stay at the hospital. Other criteria are that the newborns did not go to the neonatal intensive care unit (NICU), transfer, or die, did not reflect multiple gestation, and did not have codes for parenteral nutrition or galactosemia. General acute care hospitals report the Exclusive Breast Milk Feeding Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The CMQCC Exclusive Breast Milk Feeding Rate uses the Joint Commission National Quality Measure PC-05. For more information, please visit the following link by copying and pasting the URL into your web browser:
<https://manual.jointcommission.org/releases/TJC2024B/MIF0170.html>

Number of newborn cases that were exclusively fed breast milk during their hospital stay and meet the inclusion and exclusion criteria

HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate

General acute care hospitals are required to report several HCAI All-Cause Unplanned 30-Day Hospital Readmission Rates, which are broadly defined as the percentage of hospital-level, unplanned, all-cause readmissions after admission for eligible conditions within 30 days of hospital discharge for patients aged 18 years and older. These rates are first stratified based on any eligible condition, mental health disorders, substance use disorders, co-occurring disorders, and no behavioral health diagnosis. Then, each condition-stratified hospital readmission rate is further stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. For more information on the HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate, please visit the following link by copying and pasting the URL into your web browser:

https://hcai.ca.gov/wp-content/uploads/2024/10/HCAI-All-Cause-Readmission-Rate-Exclusions_ADA.pdf

HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate – Any Eligible Condition

Number of inpatient hospital admissions which occurs within 30 days of the discharge date of an eligible index admission and were 18 years or older at time of admission

430

Total number of patients who were admitted to the general acute care hospital and were 18 years or older at time of admission

3638

Rate of hospital-level, unplanned, all-cause readmissions after admission for any eligible condition

within 30 days of hospital discharge for patients aged 18 and older

11.8

Table 10. HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate for any eligible condition by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

Health Equity Plan

All general acute care hospitals report a health equity plan that identifies the top 10 disparities and a written plan to address them.

Top 10 Disparities

Disparities for each hospital equity measure are identified by comparing the rate ratios by stratification groups. Rate ratios are calculated differently for measures with preferred low rates and those with preferred high rates. Rate ratios are calculated after applying the California Health and Human Services Agency's "Data De-Identification Guidelines (DDG)," dated September 23, 2016.

Table 15. Top 10 disparities and their rate ratio values.

Measures	Stratifications	Stratification Group	Stratification Rate	Reference Group	Reference Rate	Rate Ratio
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Expected Payor	Medicare	13.3	Private	7.3	1.8
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Expected Payor	Medicaid	12.3	Private	7.3	1.7
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Race and/or Ethnicity	Black or African American	15.9	Asian	10.5	1.5
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Age (excluding maternal measures)	50 to 64	13.4	18 to 34	9.2	1.4
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Age (excluding maternal measures)	65 and older	11.8	18 to 34	9.2	1.3
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Age (excluding maternal measures)	35 to 49	10.7	18 to 34	9.2	1.2
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Race and/or Ethnicity	Black or African American	15.9	Asian	10.5	1.1
Agency for Healthcare Research and Quality (AHRQ) Quality Indicator Pneumonia Mortality Rate	Sex Assigned at Birth	Female	82.6	Male	73.4	1.1
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Race and/or Ethnicity	Hispanic or Latino	11.9	Asian	10.5	1.1
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate, stratified by behavioral health diagnosis (No Behavioral Health Diagnosis)	Sex Assigned at Birth	Male	10.5	Female	9.8	1.1

Plan to address disparities identified in the data

On 08/21/2025, a team presented to the Equity Committee the top 10 disparities for Palomar Poway, Palomar Escondido, and Palomar Health as a system. The top 10 disparities for Palomar Medical Center Poway were: Readmissions by Age (35 to 49, 50 to 64, 65+ vs 18 to 34), Payer (Medicare vs Private, Medicaid vs Private), Race/Ethnicity (Black, Hispanic/Latino, White vs Asian), and unique disparities: Pneumonia Mortality (Female vs Male), Readmissions without BH Dx (Male vs Female) and Unplanned 30-Day Hospital Readmission Rate, stratified by behavioral health diagnosis (No Behavioral Health Diagnosis) Sex Assigned at Birth Male.

Readmission Disparity:

Key actions:

Our actions will include education to our providers and nursing staff, which will include working with our Case Management team to develop transitional care bundle(s). These care bundles will include but will not be limited to follow-up instructions by the provider and nurse at discharge, discharge medications provided to the patient before discharge, accurate medication reconciliation to ensure no medication duplications, patient and or family education to include teach back. Palomar Medical Center will initiate home phone calls to this group of patients within 72 hours to ensure patient understanding of aftercare instructions. The RNs will provide education to the SNFs on continuity of care to ensure that the next level of care is able to facilitate care to avoid a readmission. Paloma Medical Center has SDOH screening and referrals, language—interpreters, and make every effort to provide concordant instructions, with culturally informed patient engagement.

Behavioral Health, readmissions male, the psych liaison will ensure that the patient is adequately stabilized during admission, and ensure that there is a strong discharge plan, which will include follow-up appointments and connections to community resources.

Reduce readmissions in disparity groups by greater than or equal to 20% in 12 months, and narrow the rate ratio gap by greater than or equal to 25% over 24 months

Palomar Medical Center has an Antibiotic Stewardship Committee that reviews all antibiotics to ensure they are the right choice and duration based on severity and risk factors of the patient. Palomar will engage with the Antibiotic Stewardship Committee and the providers to review their evidence based order set to ensure that it follows either CDC recommendations or Diseases Society of American. By using our SDOH data, we can also determine if any of the mortalities were linked to socioeconomic factors, like income, insurance or homelessness.

Palomar Medical Center Poway will also review and as needed revise their nursing plan of care for patients admitted with pneumonia and develop short and long term goals such as;

Patient will have appropriate blood cultures drawn before the administration of an antibiotic and in ICU continue to implement the ventilator associated pneumonia bundles to include, head of bed elevated, daily sedation vacation, and subglottic suctioning.

Goal and Time frame:

Reduce pneumonia mortality rates in disparity group /female by greater than or equal to 20% in 12 months and narrow the gap by greater than or equal to 25% over 24 months

Performance in the priority area

General acute care hospitals are required to provide hospital equity plans that address the top 10 disparities by identifying population impact and providing measurable objectives and specific timeframes. For each disparity, hospital equity plans will address performance across priority areas: person-centered care, patient safety, addressing patient social drivers of health, effective treatment, care coordination, and access to care.

Person-centered care

Palomar Medical Center, Poway effectively communicates with patients when providing care, treatment, and services. The initial phase of this is done through the nursing assessment, which is performed initially within 24 hours of admission. Nursing identifies the patient's oral and written communication needs, including the patient's preferred language for discussing health care. This communication includes the need for personal devices such as hearing aids or glasses, language interpreters, communication boards, and translated or plain language materials. The nursing staff communicates with the patient during initial nursing assessment and provides the patient treatment, and services in a manner that meets their oral and written communication needs.

Palomar Medical Centers medical record contains information that reflects the patient's care, treatment, services, race and ethnicity. Palomar Medical Center respects, protects, and promotes patient rights. To enable and promote patient centered care the policies allow a family member, friend, or other individual to be present with the patient for emotional support during the course of stay. Palomar Medical Center, Poway prohibits discrimination based on age, race, ethnicity, religion, culture, language, physical or mental disability, socioeconomic status, sex, sexual orientation, gender identity or expression. The nursing standards of care are written, as patient centered to improve the safety and quality of care for all patients and to adopt nursing practices promoting better communication and patient engagement.

Palomar nursing standards also require care plans that are to be completed within 8 hours of admission and these care plans are maintained by the interdisciplinary team that contain specific,

actionable information for staff across multiple care settings. These care plans promote communication and continuity of care/patient centered by suggesting communication strategies, treatment plans, and psychosocial resources.

Palomar Medical Centers Equity Committee is reviewing patient sub-populations to determine if they experience less safe or lower quality of care or poorer health outcomes associated with their race, ethnicity, language, disability, or sexual orientation. The Equity Committee is also reviewing other factors, to document if these disparities in health care could be caused by cultural or language barriers that could impair communication with caregivers, impeded access to care, or fear of discrimination. The goal of the Equity Committee is to address cultural, communication, mobility, SDOH, and other patient needs during their admission

Goal and Time Frame:

Increase language—concordant interactions; by greater than or equal to 90% teach back use; patient/caregiver preferences integrated and documented by greater than or equal to 90% of the time within 12 months and 100% in 24 months.

Increase care plan individualization per disparity group by greater than or equal to 90% of the time within 12 months and 100% in 24 months.

Patient safety

Palomar Medical Center, Poway conducts a patient safety survey every other year and participates in Leap Frog. Palomar Medical Center Poway received a grade A from leapfrog for their data and processes for Spring of 2025. Leapfrog is based on 30 national performance measures related to errors, accidents, injuries, infections, and the systems/processes that are in place to prevent injury or harm to a patient.

The measures that are used to calculate these grades include nursing and bedside care, nursing care for patients, staff ratios for nursing, effective leadership to prevent errors, staff working together to prevent errors, handwashing, safe ordering practices, medication reconciliation, safe medication administration, medication documentation for elective outpatient surgeries, and PSI. Palomar Medical Center Poway achieved the standard in all of these patient safety measures.

Goal and Time Frame:

Palomar Health Poway will ensure that the 10 top priorities, which include readmissions and/psych/ male, and pneumonia deaths/female, meet all the requirements for Leapfrogs 30 national performance measures by the end of 2026. This will include a reduction by greater than or equal to 15% in the PSI score which is the patient safety indicator for patient safety events, which would include pneumonia mortalities.

Addressing patient social drivers of health

Palomar Medical Center, has utilized a form for over a year called Prapare. These questions are incorporated into the initial nursing assessment for nursing. It is the expectation that nursing assessment is completed within 24 hours of admission. The drivers for the Prapare form are, food, housing, safety, medications/financial, transportation, and utility difficulties. Palomar Medical Center, Poway selected a sub-population of patients to evaluate equity based on the Joint Commission requirements. These requirements were to select a sub-population of patients to analyze. Palomar Poway selected stroke care for 2025. Our data demonstrated we had 9.1 % of our sub population of patients who had a housing instability and 6.1% had a transportation need identified. Our total volume of patients for 3rd quarter of 2025 was 33 patients. The positive results received further referrals from our Case Management team. Further analysis did also demonstrate that 1 of our questions were difficult to understand by nursing or the patient, therefore, further clarity was added to that question to enable accurate answers.

Based on the top 10 priorities the Equity Committee has elected to analyze the top 10 priority populations for 2026.

Goal and Time Frame:

Initial Data for readmissions, pneumonia mortalities, and behavioral health readmissions will be completed by December 31, 2025 for an overall percentage for social drivers of health. Once we receive the initial data for 2025, the Equity Committee will receive data quarterly for readmissions, pneumonia mortality/white female, and behavioral health readmissions/male to analyze for social determinants of health.

Goal and Time Frame:

Complete the prepare form within 12 months for SDOH by greater than or equal to 85% and 100% in 24 months.

Performance in the priority area continued

Performance across all of the following priority areas.

Effective treatment

To improve the care provided to patients with pneumonia, Palomar Health Poway has established electronic power plans to facilitate evidence-based practice throughout the organization for patients admitted with pneumonia. These power plans are in place to reduce LOS, reduce cost per case, improve mortality, and improve the readmission rate. These power plans were reviewed by multiple medical staff committees including the Antibiotic Stewardship Committee, pulmonologists, Emergency Department providers, infectious disease providers, members of the nursing leadership team, case managers, respiratory therapists, pharmacists, IT staff, and quality improvement professionals..

Palomar Medical Center, Poway supports the medical staff and interdisciplinary committee(s) in their improvement efforts by providing a dedicated dyad of improvement processes. They developed and reviewed the pneumonia power plan(s) for key care phases including:

Care for patients in the Emergency Department who are treated and are not admitted to the hospital.

Triage and disposition of patients in the Emergency Department.

Care for patients admitted to the hospital (acute care and readiness for discharge).

Readmission Disparity:

Key actions: Our actions will include education to our providers and nursing staff, which will include working with our Case Management team to develop transitional care bundle(s). These care bundles will include but will not be limited to, follow up instructions by the provider and nurse at discharge, discharge medications provided to the patient before discharge, accurate medication reconciliation to ensure no medication duplications, patient and or family education to include teach back. Palomar Medical Center will initiate home phone calls to this group of patients within 72 hours to ensure patient understanding of aftercare instructions. The RNs will provide education to the SNFs on continuity of care to ensure that the next level of care is able to facilitate care to avoid a readmission. Palomar Medical Center has SDOH screening and referrals, language interpreters, and make every effort to provide concordant instructions, and culturally informed patient engagement. Behavioral Health, readmissions male, the psych liaison will ensure that the patient is adequately stabilized during admission, and ensure that there is a strong discharge plan, which will include follow-up appointments and connections to community resources.

Goal and Time frame:

Reduce readmissions in disparity groups by greater than or equal to 20% in 12 months, and narrow

the rate ratio gap by greater than or equal to 25% over 24 months

Goal and Time frame:

Reduce pneumonia mortality rates in disparity group /female by greater than or equal to 20% in 12 months and narrow the gap by greater than or equal to 25% over 24 months.

Care coordination

Palomar Medical Center, Poway will include the following processes for care coordination for the top 10 priorities.

Palomar Medical Center, Poways EMR has a robust discharge planning and patient education process that is addressed in their Adult Inpatient Standards.

Teach-back method: Nurses ensure the patient and caregivers understand their care plan, medications, and warning signs by having them repeat the information in their own words.

Clear instructions: Discharge instructions are provided in simple, understandable language, and provided in both written and digital formats.

Shared decision-making: Involve patients in their care from the time of admission to help them prepare for a smooth transition home.

Medication management

Medication reconciliation: A medical staff-led review of all medications before discharge is performed to prevent missed, duplicate, or incorrect dosages which can cause adverse events which lead to readmissions.

Adherence support: The CRM (case management team) initiate communication with the patient to ensure patients can access and adhere to their medication schedules, which can be done through pharmacist phone calls, automated reminders, and financial assistance.

Post-discharge support and communication

Timely follow-up: The CRM and or nursing staff will schedule follow-up appointments with primary care providers (PCPs) or specialists within one week of discharge. This is performed at the time of discharge

Post-discharge contact: Depending on patient needs, there is a follow-up phone call from a nurse within 24 to 72 hours of discharge can assess the patient's condition and reinforce discharge instructions.

Time frame and Objectives for Disparity Group for care coordination:

CRM referrals in disparity groups by greater than or equal to 90% in 12 months, and narrow the 100% over 24 months

Time frame and Objectives for Disparity Group/pnm mortalities/female for care coordination:

Adherence to initiating and individualizing the nursing plan of care and use of the provider order sets to reduce pneumonia mortality rates in disparity group /female by greater than or equal to 20% in 12 months and narrow the gap by greater than or equal by greater than or equal to 25% over 24 months

Access to care

Palomar Medical Center, Poway does not refuse care to any patient regardless of their ability to pay for services. The Equity Committee receives overall data on the 5 SDOH measures. Based on positive results referrals are sent for further case management or community services.

Goal and Time Frame:

The goal is to complete the prapare form within 12 months for SDOH by greater than or equal to 85%. Those top priority patients who are positive for SDOH referrals will be made by greater than or equal to 90% within 12 months.

Methodology Guidelines

Did the hospital follow the methodology in the Measures Submission Guide? (Y/N)
