

# Hospital Equity Measures Report

## General Information

Report Type:	Hospital Equity Measures Report
Year:	2024
Hospital Name:	SIERRA VIEW MEDICAL CENTER
Facility Type:	General Acute Care Hospital
Hospital HCAI ID:	106540798
Report Period:	1/1/2024 - 12/31/2024
Status:	Complete
Due Date:	09/30/2025
Last Updated:	02/03/2026
Hospital Location with Clean Water and Air:	N
Hospital Web Address for Equity Report:	<a href="http://www.sierra-view.com">www.sierra-view.com</a>

## Overview

Assembly Bill No. 1204 requires the Department of Health Care Access and Information (HCAI) to develop and administer a Hospital Equity Measures Reporting Program to collect and post summaries of key hospital performance and patient outcome data regarding sociodemographic information, including but not limited to age, sex, race/ethnicity, payor type, language, disability status, and sexual orientation and gender identity.

Hospitals (general acute, children's, and acute psychiatric) and hospital systems are required to annually submit their reports to HCAI. These reports contain summaries of each measure, the top 10 disparities, and the equity plans to address the identified disparities. HCAI is required to maintain a link on the HCAI website that provides access to the content of hospital equity measures reports and equity plans to the public. All submitted hospitals are required to post their reports on their websites, as well.

## Laws and Regulations

For more information on Assembly Bill No. 1204, please visit the following link by copying and pasting the URL into your web browser:

[https://leginfo.legislature.ca.gov/faces/billTextClient.xhtml?bill\\_id=202120220AB1204](https://leginfo.legislature.ca.gov/faces/billTextClient.xhtml?bill_id=202120220AB1204)

## Hospital Equity Measures

### Joint Commission Accreditation

General acute care hospitals are required to report three structural measures based on the Commission Accreditation's Health Care Disparities Reduction and Patient-Centered Communication Accreditation Standards. For more information on these measures, please visit the following link by copying and pasting the URL into your web browser:

<https://www.jointcommission.org/standards/r3-report/r3-report-issue-36-new-requirements-to-reduce>

-health-care-disparities/

The first two structural measures are scored as "yes" or "no"; the third structural measure comprises the percentages of patients by five categories of preferred languages spoken, in addition to one other/unknown language category.

Designate an individual to lead hospital health equity activities (Y = Yes, N = No).

Y

Provide documentation of policy prohibiting discrimination (Y = Yes, N = No).

Y

Number of patients that were asked their preferred language, five defined categories and one other/unknown languages category.

45824

Table 1. Summary of preferred languages reported by patients.

Languages	Number of patients who report preferring language	Total number of patients	Percentage of total patients who report preferring language (%)
English Language	34918	45824	76.2
Spanish Language	10621	45824	23.2
Asian Pacific Islander Languages	65	45824	0.1
Middle Eastern Languages	125	45824	0.3
American Sign Language		45824	
Other Languages	75	45824	0.2

## Centers for Medicare & Medicaid Services (CMS) Hospital Commitment to Health Equity Structural (HCHE) Measure

There are five domains that make up the CMS Hospital Commitment to HCHE measures. Each domain is scored as "yes" or "no." In order to score "yes," a general acute care hospital is required to confirm all the domain's attestations. Lack of one or more of the attestations results in a score of "no." For more information on the CMS Hospital Commitment to HCHE measures, please visit the following link by copying and pasting the URL into your web browser:

<https://data.cms.gov/provider-data/topics/hospitals/health-equity>

### Centers for Medicare & Medicaid Services (CMS) Hospital Commitment to Health Equity Structural (HCHE) Measure Domain 1: Strategic Planning (Yes/No)

- Our hospital strategic plan identifies priority populations who currently experience health disparities.
- Our hospital strategic plan identifies healthcare equity goals and discrete action steps to achieve these goals.
- Our hospital strategic plan outlines specific resources that have been dedicated to achieving our equity goals.
- Our hospital strategic plan describes our approach for engaging key stakeholders, such as community-based organizations.

Y

### CMS HCHE Measure Domain 2: Data Collection (Yes/No)

- Our hospital strategic plan identifies healthcare equity goals and discrete action steps to achieve these goals.

- Our hospital has training for staff in culturally sensitive collection of demographics and/or social determinant of health information.
- Our hospital inputs demographic and/or social determinant of health information collected from patients into structured, interoperable data elements using a certified electronic health record (EHR) technology.

Y

CMS HCHE Measure Domain 3: Data Analysis (Yes/No)

- Our hospital stratifies key performance indicators by demographic and/or social determinants of health variables to identify equity gaps and includes this information in hospital performance dashboards.

Y

CMS HCHE Measure Domain 4: Quality Improvement (Yes/No)

- Our hospital participates in local, regional or national quality improvement activities focused on reducing health disparities.

Y

CMS HCHE Measure Domain 5: Leadership Engagement (Yes/No)

- Our hospital senior leadership, including chief executives and the entire hospital board of trustees, annually reviews our strategic plan for achieving health equity.
- Our hospital senior leadership, including chief executives and the entire hospital board of trustees, annually review key performance indicators stratified by demographic and/or social factors.

Y

**Centers for Medicare & Medicaid Services (CMS) Social Drivers of Health (SDOH)**

General acute care hospitals are required to report on rates of screenings and intervention rates among patients above 18 years old for five health related social needs (HRSN), which are food insecurity, housing instability, transportation problems, utility difficulties, and interpersonal safety. These rates are reported separately as being screened as positive for any of the five HRSNs, positive for each individual HRSN, and the intervention rate for each positively screened HRSN. For more information on the CMS SDOH, please visit the following link by copying and pasting the URL into your web browser:

<https://www.cms.gov/priorities/innovation/key-concepts/social-drivers-health-and-health-related-social-needs>

Number of patients admitted to an inpatient hospital stay who are 18 years or older on the date of admission and are screened for all of the five HRSN

3353

Total number of patients who are admitted to a hospital inpatient stay and who are 18 years or older on the date of admission

4973

Rate of patients admitted for an inpatient hospital stay who are 18 years or older on the date of admission, were screened for an HRSN, and who screened positive for one or more of the HRSNs

67.4

Table 2. Positive screening rates and intervention rates for the five Health Related Social Needs of the Centers of Medicare & Medicaid Services (CMS) Social Drivers of Health (SDOH).

<b>Social Driver of Health</b>	<b>Number of positive screenings</b>	<b>Rate of positive screenings (%)</b>	<b>Number of positive screenings who received intervention</b>	<b>Rate of positive screenings who received intervention (%)</b>
<b>Food Insecurity</b>	215	6.4	215	6.4
<b>Housing Instability</b>	135	4.0	135	4.0
<b>Transportation Problems</b>	252	7.5	252	7.5
<b>Utility Difficulties</b>	135	4.0	135	4.0
<b>Interpersonal Safety</b>	475	14.2	475	14.2

## Core Quality Measures for General Acute Care Hospitals

There are two quality measures from the Hospital Consumer Assessment of Healthcare Providers and Systems (HCAHPS) survey. For more information on the HCAHPS survey, please visit the following link by copying and pasting the URL into your web browser:

<https://hcahpsonline.org/en/survey-instruments/>

## Patient Recommends Hospital

The first HCAHPS quality measure is the percentage of patients who would recommend the hospital to friends and family. For this measure, general acute care hospitals provide the percentage of patient respondents who responded "probably yes" or "definitely yes" to whether they would recommend the hospital, the percentage of the people who responded to the survey (i.e., the response rate), and the inputs for the percentages. The percentages and inputs are stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding HCAHPS question number is 19.

Number of respondents who replied "probably yes" or "definitely yes" to HCAHPS Question 19, "Would you recommend this hospital to your friends and family?"

264

Total number of respondents to HCAHPS Question 19

293

Percentage of total respondents who responded "probably yes" or "definitely yes" to HCAHPS Question 19

90.1

Total number of people surveyed on HCAHPS Question 19

1953

Response rate, or the percentage of people who responded to HCAHPS Question 19

15

Table 3. Patient recommends hospital by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

<b>Race and/or Ethnicity</b>	<b>Number of "probably yes" or "definitely yes" responses</b>	<b>Total number of responses</b>	<b>Percent of "probably yes" or "definitely yes" responses (%)</b>	<b>Total number of patients surveyed</b>	<b>Response rate of patients surveyed (%)</b>
<b>American Indian or Alaska Native</b>

Not disclosed					

  

<b>Gender Identity</b>	<b>Number of "probably yes" or "definitely yes" responses</b>	<b>Total number of responses</b>	<b>Percent of "probably yes" or "definitely yes" responses (%)</b>	<b>Total number of patients surveyed</b>	<b>Response rate of patients surveyed (%)</b>
Female					
Female-to-male (FTM)/ transgender male/trans man					
Male					
Male-to-female (MTF)/ transgender female/trans woman					
Non-conforming gender					
Additional gender category or other					
Not disclosed					

## Patient Received Information in Writing

The second HCAHPS quality measure is the percentage of patients who reported receiving information in writing on symptoms and health problems to look out for after leaving the hospital. General acute care hospitals are required to provide the percentage of patient respondents who responded "yes" to being provided written information, the percentage of the people who responded to the survey (i.e., the response rate), and the inputs for these percentages. These percentages and inputs are stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding HCAHPS question number is 17.

Number of respondents who replied "yes" to HCAHPS Question 17, "During this hospital stay, did you get information in writing about what symptoms or health problems to look out for after you left the

hospital?"

246  
Total number of respondents to HCAHPS Question 17  
293

Percentage of respondents who responded "yes" to HCAHPS Question 17  
84

Total number of people surveyed on HCAHPS Question 17  
1953

Response rate, or the percentage of people who responded to HCAHPS Question 17  
15

Table 4. Patient reports receiving information in writing about symptoms or health problems by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

## Agency for Healthcare Research and Quality (AHRQ) Indicators

General acute care hospitals are required to report on two indicators from the Agency for Healthcare Research and Quality (AHRQ). For general information about AHRQ indicators, please visit the following link by copying and pasting the URL into your web browser:

<https://qualityindicators.ahrq.gov/>

## Pneumonia Mortality Rate

The Pneumonia Mortality Rate is defined as the rate of in-hospital deaths per 1,000 hospital discharges with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission for patients ages 18 years and older. General acute care hospitals report the Pneumonia Mortality Rate by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding AHRQ Inpatient Quality Indicator is 20. For more information about this indicator, please visit the following link by copying and pasting the URL into your web browser:

[https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI\\_20\\_Pneumonia\\_Mortality\\_Rate.pdf](https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_20_Pneumonia_Mortality_Rate.pdf)

## Death Rate among Surgical Inpatients with Serious Treatable Complications

The Death Rate among Surgical Inpatients with Serious Treatable Complications is defined as the rate of in-hospital deaths per 1,000 surgical discharges among patients ages 18-89 years old or obstetric patients with serious treatable complications. General acute care hospitals report this measure by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding AHRQ Patient Safety Indicator is 04. For more information about this indicator, please visit the following link by copying and pasting the URL into your web browser:  
[https://qualityindicators.ahrq.gov/Downloads/Modules/PSI/V2023/TechSpecs/PSI\\_04\\_Death\\_Rate\\_among\\_Surgical\\_Inpatients\\_with\\_Serious\\_Treatable\\_Complications.pdf](https://qualityindicators.ahrq.gov/Downloads/Modules/PSI/V2023/TechSpecs/PSI_04_Death_Rate_among_Surgical_Inpatients_with_Serious_Treatable_Complications.pdf)

## California Maternal Quality Care Collaborative (CMQCC) Core Quality Measures

There are three core quality maternal measures adopted from the California Maternal Quality Care Collaborative (CMQCC).

### CMQCC Nulliparous, Term, Singleton, Vertex (NTSV) Cesarean Birth Rate

The CMQCC Nulliparous, Term, Singleton, Vertex (NTSV) Cesarean Birth Rate is defined as nulliparous women with a term (at least 37 weeks gestation), singleton baby in a vertex position delivered by cesarian birth. General acute care hospitals report the NTSV Cesarean Birth Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. For more information, please visit the following link by copying and pasting the URL into your web browser:

<https://www.cmqcc.org/quality-improvement-toolkits/supporting-vaginal-birth/ntsv-cesarean-birth-measure-specifications>

## CMQCC Vaginal Birth After Cesarean (VBAC) Rate

The CMQCC Vaginal Birth After Cesarean (VBAC) Rate is defined as vaginal births per 1,000 deliveries by patients with previous Cesarean deliveries. General acute care hospitals report the VBAC Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The VBAC Rate uses the specifications of AHRQ Inpatient Quality Indicator 22. For more information, please visit the following link by copying and pasting the URL into your web browser:

[https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI\\_22\\_Vaginal\\_Birth\\_After\\_Cesarean\\_\(VBAC\)\\_Delivery\\_Rate\\_Uncomplicated.pdf](https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_22_Vaginal_Birth_After_Cesarean_(VBAC)_Delivery_Rate_Uncomplicated.pdf)

Number of vaginal delivery among cases with previous Cesarean delivery that meet the inclusion and exclusion criteria

suppressed

Total number of birth discharges with previous Cesarean delivery that meet the inclusion and exclusion criteria

suppressed

Rate of vaginal delivery per 1,000 deliveries by patients with previous Cesarean deliveries

suppressed

## CMQCC Exclusive Breast Milk Feeding Rate

The CMQCC Exclusive Breast Milk Feeding Rate is defined as the newborns per 100 who reached at least 37 weeks of gestation (or 3000g if gestational age is missing) who received breast milk

exclusively during their stay at the hospital. Other criteria are that the newborns did not go to the neonatal intensive care unit (NICU), transfer, or die, did not reflect multiple gestation, and did not have codes for parenteral nutrition or galactosemia. General acute care hospitals report the Exclusive Breast Milk Feeding Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The CMQCC Exclusive Breast Milk Feeding Rate uses the Joint Commission National Quality Measure PC-05. For more information, please visit the following link by copying and pasting the URL into your web browser:  
<https://manual.jointcommission.org/releases/TJC2024B/MIF0170.html>

Number of newborn cases that were exclusively fed breast milk during their hospital stay and meet the inclusion and exclusion criteria

90

Total number of newborn cases born in the hospital that meet the inclusion and exclusion criteria

196

Rate of newborn cases per 100 that were exclusively fed breast milk during their hospital stay and meet the inclusion and exclusion criteria

45.9

## HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate

General acute care hospitals are required to report several HCAI All-Cause Unplanned 30-Day Hospital Readmission Rates, which are broadly defined as the percentage of hospital-level, unplanned, all-cause readmissions after admission for eligible conditions within 30 days of hospital discharge for patients aged 18 years and older. These rates are first stratified based on any eligible condition, mental health disorders, substance use disorders, co-occurring disorders, and no behavioral health diagnosis. Then, each condition-stratified hospital readmission rate is further stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. For more information on the HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate, please visit the following link by copying and pasting the URL into your web browser:

[https://hcai.ca.gov/wp-content/uploads/2024/10/HCAI-All-Cause-Readmission-Rate-Exclusions\\_ADA.pdf](https://hcai.ca.gov/wp-content/uploads/2024/10/HCAI-All-Cause-Readmission-Rate-Exclusions_ADA.pdf)

## HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate – Any Eligible Condition

Number of inpatient hospital admissions which occurs within 30 days of the discharge date of an eligible index admission and were 18 years or older at time of admission

337

Total number of patients who were admitted to the general acute care hospital and were 18 years or older at time of admission

3673

Rate of hospital-level, unplanned, all-cause readmissions after admission for any eligible condition

within 30 days of hospital discharge for patients aged 18 and older

## 9.2

Table 10. HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate for any eligible condition by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

## Health Equity Plan

All general acute care hospitals report a health equity plan that identifies the top 10 disparities and a written plan to address them.

## Top 10 Disparities

Disparities for each hospital equity measure are identified by comparing the rate ratios by stratification groups. Rate ratios are calculated differently for measures with preferred low rates and those with preferred high rates. Rate ratios are calculated after applying the California Health and Human Services Agency's "Data De-Identification Guidelines (DDG)," dated September 23, 2016.

Table 15. Top 10 disparities and their rate ratio values.

Measures	Stratifications	Stratification Group	Stratification Rate	Reference Group	Reference Rate	Rate Ratio
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Age (excluding maternal measures)	50 to 64	14.3	18 to 34	3	4.8
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Age (excluding maternal measures)	65 and older	12.4	18 to 34	3	4.2
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Expected Payor	Medicare	13	Private	5.7	2.3
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Sex Assigned at Birth	Male	12.4	Female	7.1	1.8
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Age (excluding maternal measures)	35 to 49	5.1	18 to 34	3	1.7
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Race and/or Ethnicity	White	12.1	Hispanic or Latino	7.3	1.7
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Expected Payor	Medicaid	6.9	Private	5.7	1.2

#### Plan to address disparities identified in the data

SVMC's only had 7 top disparities, all of which are centered around readmission rates. Below is the breakdown of each, including steps taken to address the noted disparity as well as goals for improvement.

- All-cause unplanned 30-day hospital readmission rates for ages 50-64
- All-cause unplanned 30-day hospital readmission rates for ages 65 and older
- All-cause unplanned 30-day hospital readmission rates for medicare patients
- All-cause unplanned 30-day hospital readmission rates for males
- All-cause unplanned 30-day hospital readmission rates for ages 35-49
- All-cause unplanned 30-day hospital readmission rates for Caucasians
- All-cause unplanned 30-day hospital readmission rates for Medicaid patients

Because SVMC believes every patient deserves the highest level of care, our approach does not focus on isolating specific groups, but rather addresses readmissions as a whole. Upon admission, each patient is evaluated by a member of our Social Services team—professionals trained to identify and mitigate barriers to a safe and successful discharge. They collaborate closely with physicians and bedside nurses through daily rounding, ensuring clear communication and updated information is shared with the care team, patients, and families. These interactions also provide opportunities for patients and families to ask questions, participate in care planning, and understand discharge needs.

Patients readmitted within 30 days are flagged in our system, automatically generating a high-priority referral to Social Services. A readmission assessment is then conducted to identify contributing factors. The most common reasons include:

- Medication non-compliance
- Declining recommendations for skilled nursing facility placement and opting to discharge home instead
- Delays in follow-up appointments with primary care providers

To address medication non-compliance, SVMC integrates a Clinical Pharmacist into the Social Services team. The pharmacist reviews medication regimens, provides detailed instructions, and

ensures prescriptions are accessible and affordable through local pharmacies. Patients may also contact the pharmacist after discharge for additional support, a role we have found to be highly effective in preventing unplanned returns to the hospital or emergency department.

Timely follow-up care is another key factor. Through SVMC's Internal Medicine Residency program, we established a continuity clinic to provide post-discharge appointments for patients without a primary care provider or when their physician cannot accommodate a timely visit. This helps identify and mitigate issues early on that, if left unaddressed, could lead to a 30-day readmission. When patients or families decline recommendations for skilled nursing or hospice care, our role is to provide education on safe discharge options and to ensure decisions align with their goals of care. Our responsibility is to support informed decision-making throughout the healthcare journey. We partner with several post-acute partners that offer virtual tours of their facilities as well as to have members of their team come meet with the patient and family to help increase comfort in making this decision. Additionally, if the patient returns to the emergency room indicating they might need a skilled facility, our social services team works to get them placed right away rather than requiring an additional hospital stay.

Although SVMC's readmission rates, as reported by CMS, are consistent with peer organizations, we have set a goal to reduce overall readmissions by 2%.

## **Performance in the priority area**

General acute care hospitals are required to provide hospital equity plans that address the top 10 disparities by identifying population impact and providing measurable objectives and specific timeframes. For each disparity, hospital equity plans will address performance across priority areas: person-centered care, patient safety, addressing patient social drivers of health, effective treatment, care coordination, and access to care.

### **Person-centered care**

SVMC is dedicated to providing care that is truly centered on the patient at every level of the organization. Our Board of Directors recently adopted a new organizational vision statement that emphasizes this commitment to patient-centered care.

To ensure the patient voice guides our work, we maintain a Patient and Family Advisory Council, which continually welcomes new applicants. This group reviews proposed service line changes, program enhancements, and patient-facing materials. Their feedback helps us confirm that the consumer perspective is incorporated before final decisions are made.

Within the hospital, our team of dedicated healthcare professionals keeps patients and families informed and actively engaged in care. We prioritize clear communication about treatment goals and the steps needed to achieve them, supported by daily bedside multidisciplinary rounds.

At registration, patients are asked about language preferences, and professional interpreters are available throughout their stay. To foster equitable and respectful care, staff complete training in cultural competence and implicit bias. In addition, a Patient Safety Liaison conducts regular rounds in both inpatient units and the Emergency Department to ensure communication is clear and to connect patients with their care team if they have further questions or requests that could enhance their experience.

Recognizing the importance of emotional and spiritual well-being, SVMC also offers chaplain assistant visits for those seeking spiritual support, as well as volunteer pet-therapy visits for patients who find comfort in the presence of an animal companion.

### **Patient safety**

At SVMC, we believe that errors should be acknowledged and discussed openly, so that we can

learn from them and strengthen our systems to prevent future harm. To support this commitment, SVMC adopted the BETA HEART program—a coordinated approach that fosters a reliable and sustainable culture of safety.

HEART stands for Healing, Empathy, Accountability, Resolution, and Trust. The program is designed to support patients, families, and caregivers in the event of medical harm. It encompasses five domains, all of which SVMC has been validated in:

- Culture of Safety Practices
- Rapid Event Response and Analysis
- Communication and Transparency
- Care for the Caregiver Program
- Early Resolution

Since beginning this work in 2017, SVMC has consistently demonstrated the HEART program's principles, with full validation achieved in 2024. These principles emphasize timely, transparent communication with patients and families when harm events occur. If an event does take place, SVMC follows structured steps: ensuring open communication with patients and families, providing support for the care team involved, conducting a rapid and thorough review, and sharing lessons learned—along with system improvements—throughout the organization and with the Board of Directors.

SVMC also employs a Patient Safety Officer and two full-time patient safety specialists. These individuals round daily with both patients and staff to identify gaps in care, listen to concerns, and share important updates related to patient safety practices. They review daily safety event reports, working to understand root causes and implement system-level improvements. This proactive approach fosters a strong culture of safety—one proven to result in safer, more reliable care for our patients.

SVMC has also committed to the application of Just Culture principles within the organization. This theory states that human errors will happen, but it is the organizations responsibility to build error-tolerant systems for our staff to work within. By having strong systems in place, it prevents human error from reaching the patient. This builds psychological safety for staff, which is demonstrated in translating to strong patient safety practices.

#### Addressing patient social drivers of health

At SVMC, every patient is assessed for social determinants of health throughout their hospital stay by our interdisciplinary team of nurses, registration staff, and social workers. These assessments explore factors such as access to stable housing, nutritious food, caregiver respite, safe living environments, and reliable transportation.

When needs are identified, our team connects patients with appropriate resources and ensures they understand how to access them. Referrals are tailored to each patient's preferences, ranging from written resource guides to warm hand-offs with community partners. In some cases, staff provide direct assistance with phone calls for program enrollment and offer education to family members on how they can support ongoing access to care.

While many organizations have closed their maternal child health service lines in the past year, SVMC has not only maintained these essential services but expanded them. Recognizing the many long-term health benefits of breastfeeding—including the reduction of chronic health conditions—we have invested in comprehensive support for new mothers. SVMC offers donor human breast milk for infants when breastfeeding is a challenge, as well as access to lactation consultants and outpatient lactation services.

To ensure accessibility, all resource materials are printed in both English and Spanish, meeting the language needs of approximately 95% of the population we serve.

## Performance in the priority area continued

Performance across all of the following priority areas.

### Effective treatment

Sierra View is committed to delivering the highest standard of care through the development and implementation of evidence-based practices that support optimal patient outcomes. SVMC has established bundled care protocols for a wide range of clinical conditions, including stroke, sepsis, STEMI, and non-STEMI heart infarctions.

To prevent deterioration and escalation of care, rapid response alerts are activated at the earliest signs of patient decline—even subtle changes. These alerts trigger an immediate, multidisciplinary assessment aimed at stabilizing the patient and reducing the likelihood of disease progression. Since implementation, the number of code blue alerts outside the ICU has declined significantly, underscoring the effectiveness of early recognition and intervention in reducing cardiac arrests and transfers to higher levels of care.

SVMC's commitment to quality is reflected in external recognition and superior outcomes. The organization has earned the Stroke Gold Plus Award and Stroke Honor Roll Award from the American Heart Association for excellence in stroke care. Sepsis performance metrics consistently exceed 80%, surpassing peer group benchmarks. In addition, SVMC's PCI Cath Lab has maintained a complication rate of less than 0.2% for several consecutive years. To drive continuous improvement, dedicated committees review all code blue alerts and mortality cases, ensuring insights are translated into practice.

Beyond acute care, SVMC provides outpatient services that ensure continuity and access. These include the Rural Health Center in Terra Bella and a Continuity Clinic for patients without a primary care provider. Given the high prevalence of diabetes in the community, SVMC also operates a Wound Healing Center with a hyperbaric chamber, achieving a 90% healing rate for patients with diabetic foot ulcers.

In 2024, SVMC advanced maternal care by implementing the latest evidence-based protocol for maternal sepsis—recognizing its distinctions from adult sepsis. Developed by an interdisciplinary team, this pathway ensures early recognition and timely treatment throughout the perinatal period and up to 30 days postpartum.

All care bundles are aligned with national industry standards, embedded into provider order sets for easy access, and regularly reviewed to ensure that the most current guidelines are consistently applied.

### Care coordination

At Sierra View, discharge planning begins the moment a patient enters the hospital. We understand that a safe and seamless transition from acute care to home—or another level of care—requires time, coordination, and thoughtful planning.

Our team of social workers collaborates with patients and families to review provider-recommended discharge options, ensuring that appropriate insurance coverage and authorizations are in place. They arrange for everything from durable medical equipment and home health services to hospice, support groups, outpatient appointments, and alternative placements. The priority is always to provide patients with meaningful choices, empowering them to select the options that best fit their needs—while ensuring safety and access to the follow-up care necessary for a successful recovery. Sierra View also offers a wide range of outpatient services, and we work diligently to ensure smooth transitions and timely access to appointments after discharge.

Care coordination goes beyond logistics to include complex case management and addressing social determinants of health. Each day, multidisciplinary rounds are conducted to assess and discuss patient needs. A designated clinical pharmacist participates in these rounds, providing

direct communication and education to patients about their medications. She also ensures patients can access prescribed therapies by reviewing formularies and cost considerations. If a medication is off-formulary or prohibitively expensive, she collaborates with physicians to identify effective, sustainable alternatives.

#### Access to care

SVMC recognizes that we serve a unique community with a high prevalence of chronic illness, requiring both inpatient care and ongoing outpatient support. To meet these needs, we offer a broad range of service lines, including:

- Women's Imaging Center with state-of-the-art technology
- Outpatient laboratories
- Continuity Clinic for patients recently discharged who do not yet have a primary care provider or are unable to secure a timely appointment
- Cancer Treatment Center
- Wound Healing Center with hyperbaric chambers
- Urology Clinic
- Rural Health Clinic
- Obstetrics and Gynecology Clinic

These outpatient clinics not only provide specialized care but also educate patients on how to effectively manage their conditions, promoting long-term health and quality of life. Upon discharge, patients receive a detailed plan that includes referrals to these services, along with scheduled follow-up appointments.

To address transportation barriers, SVMC has partnered with several local transportation companies, creating patient accounts that allow us to arrange reliable and recurring transportation to follow-up appointments. This ensures that lack of transportation does not become a barrier to care.

For patients without a primary care physician, our Social Services team works to identify one through their insurance and schedule an initial appointment after discharge. We also provide a Community Resource Guide, available in both English and Spanish (covering 95% of our population), which lists specialty clinics and local support services to further assist patients in navigating their care.

## Methodology Guidelines

Did the hospital follow the methodology in the Measures Submission Guide? (Y/N)
