

Hospital Equity Measures Report

General Information

Report Type:	Hospital Equity Measures Report
Year:	2024
Hospital Name:	PALMDALE REGIONAL MEDICAL CENTER
Facility Type:	General Acute Care Hospital
Hospital HCAI ID:	106196405
Report Period:	1/1/2024 - 12/31/2024
Status:	Complete
Due Date:	11/29/2025
Last Updated:	02/03/2026
Hospital Location with Clean Water and Air:	N
Hospital Web Address for Equity Report:	https://www.swhpalmdaleregional.com/patients-visitors

Overview

Assembly Bill No. 1204 requires the Department of Health Care Access and Information (HCAI) to develop and administer a Hospital Equity Measures Reporting Program to collect and post summaries of key hospital performance and patient outcome data regarding sociodemographic information, including but not limited to age, sex, race/ethnicity, payor type, language, disability status, and sexual orientation and gender identity.

Hospitals (general acute, children's, and acute psychiatric) and hospital systems are required to annually submit their reports to HCAI. These reports contain summaries of each measure, the top 10 disparities, and the equity plans to address the identified disparities. HCAI is required to maintain a link on the HCAI website that provides access to the content of hospital equity measures reports and equity plans to the public. All submitted hospitals are required to post their reports on their websites, as well.

Laws and Regulations

For more information on Assembly Bill No. 1204, please visit the following link by copying and pasting the URL into your web browser:
https://leginfo.legislature.ca.gov/faces/billTextClient.xhtml?bill_id=202120220AB1204

Hospital Equity Measures

Joint Commission Accreditation

General acute care hospitals are required to report three structural measures based on the Commission Accreditation's Health Care Disparities Reduction and Patient-Centered Communication Accreditation Standards. For more information on these measures, please visit the following link by copying and pasting the URL into your web browser:

The first two structural measures are scored as "yes" or "no"; the third structural measure comprises the percentages of patients by five categories of preferred languages spoken, in addition to one other/unknown language category.

Designate an individual to lead hospital health equity activities (Y = Yes, N = No).

Y

Provide documentation of policy prohibiting discrimination (Y = Yes, N = No).

Y

Number of patients that were asked their preferred language, five defined categories and one other/unknown languages category.

102166

Table 1. Summary of preferred languages reported by patients.

Languages	Number of patients who report preferring language	Total number of patients	Percentage of total patients who report preferring language (%)
English Language	89024	102166	87.1
Spanish Language	12395	102166	12.1
Asian Pacific Islander Languages	49	102166	0
Middle Eastern Languages	110	102166	0.1
American Sign Language		102166	
Other Languages	588	102166	0.6

Centers for Medicare & Medicaid Services (CMS) Hospital Commitment to Health Equity Structural (HCHE) Measure

There are five domains that make up the CMS Hospital Commitment to HCHE measures. Each domain is scored as "yes" or "no." In order to score "yes," a general acute care hospital is required to confirm all the domain's attestations. Lack of one or more of the attestations results in a score of "no." For more information on the CMS Hospital Commitment to HCHE measures, please visit the following link by copying and pasting the URL into your web browser:

<https://data.cms.gov/provider-data/topics/hospitals/health-equity>

Centers for Medicare & Medicaid Services (CMS) Hospital Commitment to Health Equity Structural (HCHE) Measure Domain 1: Strategic Planning (Yes/No)

- Our hospital strategic plan identifies priority populations who currently experience health disparities.
- Our hospital strategic plan identifies healthcare equity goals and discrete action steps to achieve these goals.
- Our hospital strategic plan outlines specific resources that have been dedicated to achieving our equity goals.
- Our hospital strategic plan describes our approach for engaging key stakeholders, such as community-based organizations.

Y

CMS HCHE Measure Domain 2: Data Collection (Yes/No)

- Our hospital strategic plan identifies healthcare equity goals and discrete action steps to achieve these goals.
- Our hospital has training for staff in culturally sensitive collection of demographics and/or social determinant of health information.
- Our hospital inputs demographic and/or social determinant of health information collected from patients into structured, interoperable data elements using a certified electronic health record (EHR) technology.

Y

CMS HCHE Measure Domain 3: Data Analysis (Yes/No)

- Our hospital stratifies key performance indicators by demographic and/or social determinants of health variables to identify equity gaps and includes this information in hospital performance dashboards.

Y

CMS HCHE Measure Domain 4: Quality Improvement (Yes/No)

- Our hospital participates in local, regional or national quality improvement activities focused on reducing health disparities.

Y

CMS HCHE Measure Domain 5: Leadership Engagement (Yes/No)

- Our hospital senior leadership, including chief executives and the entire hospital board of trustees, annually reviews our strategic plan for achieving health equity.
- Our hospital senior leadership, including chief executives and the entire hospital board of trustees, annually review key performance indicators stratified by demographic and/or social factors.

Y

Centers for Medicare & Medicaid Services (CMS) Social Drivers of Health (SDOH)

General acute care hospitals are required to report on rates of screenings and intervention rates among patients above 18 years old for five health related social needs (HRSN), which are food insecurity, housing instability, transportation problems, utility difficulties, and interpersonal safety. These rates are reported separately as being screened as positive for any of the five HRSNs, positive for each individual HRSN, and the intervention rate for each positively screened HRSN. For more information on the CMS SDOH, please visit the following link by copying and pasting the URL into your web browser:

<https://www.cms.gov/priorities/innovation/key-concepts/social-drivers-health-and-health-related-social-needs>

Number of patients admitted to an inpatient hospital stay who are 18 years or older on the date of admission and are screened for all of the five HRSN

1163

Total number of patients who are admitted to a hospital inpatient stay and who are 18 years or older on the date of admission

10465

Rate of patients admitted for an inpatient hospital stay who are 18 years or older on the date of admission, were screened for an HRSN, and who screened positive for one or more of the HRSNs

11.1

Table 2. Positive screening rates and intervention rates for the five Health Related Social Needs of the Centers of Medicare & Medicaid Services (CMS) Social Drivers of Health (SDOH).

Social Driver of Health	Number of positive screenings	Rate of positive screenings (%)	Number of positive screenings who received intervention	Rate of positive screenings who received intervention (%)
Food Insecurity	278	23.9	0	0
Housing Instability	276	23.7	0	0
Transportation Problems	410	35.2	0	0
Utility Difficulties	199	17.1	0	0
Interpersonal Safety	0	0	0	0

Core Quality Measures for General Acute Care Hospitals

There are two quality measures from the Hospital Consumer Assessment of Healthcare Providers and Systems (HCAHPS) survey. For more information on the HCAHPS survey, please visit the following link by copying and pasting the URL into your web browser:

<https://hcahpsonline.org/en/survey-instruments/>

Patient Recommends Hospital

The first HCAHPS quality measure is the percentage of patients who would recommend the hospital to friends and family. For this measure, general acute care hospitals provide the percentage of patient respondents who responded "probably yes" or "definitely yes" to whether they would recommend the hospital, the percentage of the people who responded to the survey (i.e., the response rate), and the inputs for the percentages. The percentages and inputs are stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding HCAHPS question number is 19.

Number of respondents who replied "probably yes" or "definitely yes" to HCAHPS Question 19, "Would you recommend this hospital to your friends and family?"

370

Total number of respondents to HCAHPS Question 19

398

Percentage of total respondents who responded "probably yes" or "definitely yes" to HCAHPS Question 19

93

Total number of people surveyed on HCAHPS Question 19

3317

Response rate, or the percentage of people who responded to HCAHPS Question 19

12

Table 3. Patient recommends hospital by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

Race and/or Ethnicity	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
American Indian or Alaska Native					
Asian					
Black or African American					
Hispanic or Latino					
Middle Eastern or North African					
Multiracial and/or Multiethnic (two or more races)					
Native Hawaiian or Pacific Islander					
White					

Age	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Age < 18					
Age 18 to 34					
Age 35 to 49					
Age 50 to 64					
Age 65 Years and Older					

Sex assigned at birth	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Female					
Male					
Unknown					

Payer Type	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Medicare					
Medicaid					
Private					
Self-Pay					
Other					

Preferred Language	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
English Language					
Spanish Language					
Asian Pacific Islander Languages					
Middle Eastern Languages					
American Sign Language					
Other/Unknown Languages					

Disability Status	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Does not have a disability					
Has a mobility disability					
Has a cognition disability					
Has a hearing disability					
Has a vision disability					
Has a self-care disability					
Has an independent living disability					

Sexual Orientation	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Lesbian, gay or homosexual					
Straight or heterosexual					
Bisexual					
Something else					
Don't know					
Not disclosed					

Gender Identity	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Female					
Female-to-male (FTM)/ transgender male/trans man					
Male					
Male-to-female (MTF)/ transgender female/trans woman					
Non-conforming gender					
Additional gender category or other					
Not disclosed					

Patient Received Information in Writing

The second HCAHPS quality measure is the percentage of patients who reported receiving information in writing on symptoms and health problems to look out for after leaving the hospital. General acute care hospitals are required to provide the percentage of patient respondents who responded "yes" to being provided written information, the percentage of the people who responded to the survey (i.e., the response rate), and the inputs for these percentages. These percentages and inputs are stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding HCAHPS question number is 17.

Number of respondents who replied "yes" to HCAHPS Question 17, "During this hospital stay, did you get information in writing about what symptoms or health problems to look out for after you left the

hospital?"

326
Total number of respondents to HCAHPS Question 17
398

Percentage of respondents who responded "yes" to HCAHPS Question 17
81.9

Total number of people surveyed on HCAHPS Question 17
3317

Response rate, or the percentage of people who responded to HCAHPS Question 17
12

Table 4. Patient reports receiving information in writing about symptoms or health problems by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

Race and/or Ethnicity	Number of "yes" responses	Total number of responses	Percentage of "yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
American Indian or Alaska Native					
Asian					
Black or African American					
Hispanic or Latino					
Middle Eastern or North African					
Multiracial and/or Multiethnic (two or more races)

Agency for Healthcare Research and Quality (AHRQ) Indicators

General acute care hospitals are required to report on two indicators from the Agency for Healthcare Research and Quality (AHRQ). For general information about AHRQ indicators, please visit the following link by copying and pasting the URL into your web browser:

<https://qualityindicators.ahrq.gov/>

Pneumonia Mortality Rate

The Pneumonia Mortality Rate is defined as the rate of in-hospital deaths per 1,000 hospital discharges with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission for patients ages 18 years and older. General acute care hospitals report the Pneumonia Mortality Rate by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding AHRQ Inpatient Quality Indicator is 20. For more information about this indicator, please visit the following link by copying and pasting the URL into your web browser:

https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_20_Pneumonia_Mortality_Rate.pdf

Number of in-hospital deaths with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission

26

Total number of hospital discharges with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission

549

Rate of in-hospital deaths per 1,000 hospital discharges with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission

47.4

Table 5. Pneumonia Mortality Rate by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

Race and/or Ethnicity	Number of in-hospital deaths that meet the inclusion/exclusion criteria	Number of hospital discharges that meet the inclusion/exclusion criteria	Rate of in-hospital deaths per 1,000 hospital discharges that meet the inclusion/exclusion criteria (%)

Death Rate among Surgical Inpatients with Serious Treatable Complications

The Death Rate among Surgical Inpatients with Serious Treatable Complications is defined as the rate of in-hospital deaths per 1,000 surgical discharges among patients ages 18-89 years old or obstetric patients with serious treatable complications. General acute care hospitals report this measure by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding AHRQ Patient Safety Indicator is 04. For more information about this indicator, please visit the following link by copying and pasting the URL into your web browser:

California Maternal Quality Care Collaborative (CMQCC) Core Quality Measures

There are three core quality maternal measures adopted from the California Maternal Quality Care Collaborative (CMQCC).

CMQCC Nulliparous, Term, Singleton, Vertex (NTSV) Cesarean Birth Rate

The CMQCC Nulliparous, Term, Singleton, Vertex (NTSV) Cesarean Birth Rate is defined as nulliparous women with a term (at least 37 weeks gestation), singleton baby in a vertex position delivered by cesarian birth. General acute care hospitals report the NTSV Cesarean Birth Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. For more information, please visit the following link by copying and pasting the URL into your web browser:

CMQCC Vaginal Birth After Cesarean (VBAC) Rate

The CMQCC Vaginal Birth After Cesarean (VBAC) Rate is defined as vaginal births per 1,000 deliveries by patients with previous Cesarean deliveries. General acute care hospitals report the VBAC Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The VBAC Rate uses the specifications of AHRQ Inpatient Quality Indicator 22. For more information, please visit the following link by copying and pasting the URL into your web browser:

[https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_22_Vaginal_Birth_After_Cesarean_\(VBAC\)_Delivery_Rate_Uncomplicated.pdf](https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_22_Vaginal_Birth_After_Cesarean_(VBAC)_Delivery_Rate_Uncomplicated.pdf)

CMQCC Exclusive Breast Milk Feeding Rate

The CMQCC Exclusive Breast Milk Feeding Rate is defined as the newborns per 100 who reached at least 37 weeks of gestation (or 3000g if gestational age is missing) who received breast milk

exclusively during their stay at the hospital. Other criteria are that the newborns did not go to the neonatal intensive care unit (NICU), transfer, or die, did not reflect multiple gestation, and did not have codes for parenteral nutrition or galactosemia. General acute care hospitals report the Exclusive Breast Milk Feeding Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The CMQCC Exclusive Breast Milk Feeding Rate uses the Joint Commission National Quality Measure PC-05. For more information, please visit the following link by copying and pasting the URL into your web browser: <https://manual.jointcommission.org/releases/TJC2024B/MIF0170.html>

Number of newborn cases that were exclusively fed breast milk during their hospital stay and meet the inclusion and exclusion criteria

HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate

General acute care hospitals are required to report several HCAI All-Cause Unplanned 30-Day Hospital Readmission Rates, which are broadly defined as the percentage of hospital-level, unplanned, all-cause readmissions after admission for eligible conditions within 30 days of hospital discharge for patients aged 18 years and older. These rates are first stratified based on any eligible condition, mental health disorders, substance use disorders, co-occurring disorders, and no behavioral health diagnosis. Then, each condition-stratified hospital readmission rate is further stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. For more information on the HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate, please visit the following link by copying and pasting the URL into your web browser:

https://hcai.ca.gov/wp-content/uploads/2024/10/HCAI-All-Cause-Readmission-Rate-Exclusions_ADA.pdf

HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate – Any Eligible Condition

Number of inpatient hospital admissions which occurs within 30 days of the discharge date of an eligible index admission and were 18 years or older at time of admission

909

Total number of patients who were admitted to the general acute care hospital and were 18 years or older at time of admission

5587

Rate of hospital-level, unplanned, all-cause readmissions after admission for any eligible condition

within 30 days of hospital discharge for patients aged 18 and older

16.3

Health Equity Plan

All general acute care hospitals report a health equity plan that identifies the top 10 disparities and a written plan to address them.

Top 10 Disparities

Disparities for each hospital equity measure are identified by comparing the rate ratios by stratification groups. Rate ratios are calculated differently for measures with preferred low rates and those with preferred high rates. Rate ratios are calculated after applying the California Health and Human Services Agency's "Data De-Identification Guidelines (DDG)," dated September 23, 2016.

Table 15. Top 10 disparities and their rate ratio values.

Measures	Stratifications	Stratification Group	Stratification Rate	Reference Group	Reference Rate	Rate Ratio
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Race and/or Ethnicity	Native Hawaiian or Pacific Islander	29.5	Hispanic or Latino	14	2.1
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Expected Payor	Medicaid	18	Private	8.6	2.1
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Expected Payor	Medicare	17.3	Private	8.6	2
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Race and/or Ethnicity	Black or African American	17.6	Hispanic or Latino	14	1.3
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate, stratified by behavioral health diagnosis (No Behavioral Health Diagnosis)	Sex Assigned at Birth	Male	15.4	Female	13.3	1.2
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Sex Assigned at Birth	Male	17.4	Female	15.2	1.1
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Race and/or Ethnicity	White	15.5	Hispanic or Latino	14	1.1
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Age (excluding maternal measures)	50 to 64	16.8	35 to 49	15.8	1.1
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Age (excluding maternal measures)	65 and older	16.2	35 to 49	15.8	1
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Age (excluding maternal measures)	18 to 34	15.8	35 to 49	15.8	1

Plan to address disparities identified in the data

A review of the facility's equity data identified unplanned readmissions as the primary disparity, particularly among patients without primary care access, those who missed follow-up appointments, and those who had difficulty understanding their medications. To address these gaps, the facility focused on improving care continuity and reducing preventable readmissions among the most affected populations.

Analysis showed that many readmitted patients did not see a Primary Care Provider (PCP) after discharge, leading to unmanaged conditions and avoidable hospital returns. In response, the facility established an Equity Action Plan with three targeted initiatives, each with measurable objectives and a quarterly performance goal of 90%. All initiatives exceeded their targets.

1. PCP appointment scheduled

To reduce disparities in primary care access, our facility partnered with a community clinic through its residency program. Uninsured and unaffiliated patients are now assigned a PCP before discharge, supporting ongoing care for those at the highest risk of readmission.

2. Follow-up appointment scheduled prior to Discharge

Discharge staff now schedule follow-up PCP appointments before patients leave the hospital, reducing barriers such as scheduling delays and transportation issues.

3. Discharge Med Rec: One-on-One Discharge Medication Education

To address medication-related readmissions, pharmacy staff provide individualized medication education for patients and families, including clear explanations of medication purpose, dosing, and safe use.

These initiatives directly addressed key drivers of readmission disparities by improving access to primary care, strengthening follow-up compliance, and enhancing understanding of medications. All

efforts exceeded performance goals, demonstrating meaningful progress in reducing inequities and improving long-term patient outcomes.

Performance in the priority area

General acute care hospitals are required to provide hospital equity plans that address the top 10 disparities by identifying population impact and providing measurable objectives and specific timeframes. For each disparity, hospital equity plans will address performance across priority areas: person-centered care, patient safety, addressing patient social drivers of health, effective treatment, care coordination, and access to care.

Person-centered care

The facility identified an opportunity for improvement in the stroke population as a key focus within the person-centered care priority area. Specifically, this effort was aligned with addressing disparities noted in the All-Cause Unplanned 30-Day Hospital Readmission assessment, which revealed increased readmission rates related to the stroke population among Hispanics whose primary language is not English. Our service area reflects a diverse demographic, consisting of approximately 35% White, 31% Other Race, 15% Two or More Races, 12% Black or African American, 5% Asian, and 2% Native American, Hawaiian, or Pacific Islander. Additionally, 46.8% of the community identify Spanish as their primary language.

In response to these findings and in alignment with the facility's commitment to person-centered stroke care, the facility conducted a comprehensive review of all stroke education materials to ensure accessibility, clarity, and cultural relevance. As part of this process, the facility developed Spanish-language versions of the stroke education resources. It incorporated publicly available stroke-specific information into the facility's website to broaden access for patients, caregivers, and community members.

To further support equitable access to education and promote community engagement, the facility created and delivered stroke education through bilingual outreach initiatives, including developing and disseminating English- and Spanish-language stroke education videos as part of the facility's community outreach and education program. These efforts aim to enhance patient understanding, support informed decision-making, and ultimately reduce preventable hospital readmissions among vulnerable populations.

Patient safety

Patient safety remained a top priority throughout the evaluation period, with a particular focus on improving medication safety and adherence, which are critical factors in preventing adverse events and reducing hospital readmissions.

To support this priority, Pharmacy Services implemented one-on-one medication education by pharmacists for patients and their families. This individualized approach ensured that patients received tailored guidance regarding their medication regimen, potential side effects, proper administration, and the importance of adherence. These efforts help patients manage their conditions effectively after discharge, thereby reducing readmissions.

Additionally, the facility expanded its communication tools by developing a Spanish-language medication board, enhancing accessibility for Spanish-speaking patients and families, and ensuring they can fully understand their medication plans.

These initiatives have strengthened patient knowledge, improved medication compliance, enhanced overall patient safety, and supported the facility's goal of reducing preventable readmissions.

Addressing patient social drivers of health

In 2024, our facility's review of the all-cause, unplanned 30-day readmission scorecard revealed that

approximately 33% of patients did not have a scheduled primary care follow-up. Contributing factors included lack of an established PCP, incomplete PCP information, financial and insurance barriers, and limited access to community resources.

The facility expanded partnerships with community-based organizations, including AVENUE, the UCLA Pritzker Center for Strengthening Children and Families, AV Health Neighborhood Meetings, and agencies providing caregiver support, food and housing assistance, spiritual care, maternal mental health, and primary care navigation.

In alignment with long-term strategies to address provider shortages, the facility collaborated with the UHS SoCal Medical Executive Consortium to develop a Graduate Medical Education (GME) program. The Family Medicine residency program helps mitigate the documented shortage of family medicine providers within our Health Provider Shortage Area. The program's continuity clinic at Bartz-Altadonna, an FQHC, serves a diverse and underserved population and offers services such as diabetes and nutrition education, prenatal care, CHDP exams, mental health and substance use support, food insecurity programs, and immunization services.

Overall, the facility's efforts represent a proactive and integrated approach to addressing SDoH. Through strengthened screening, expanded community collaboration, and investment in primary care workforce development, we continue to reduce avoidable readmissions, enhance equity, and improve patient outcomes.

Performance in the priority area continued

Performance across all of the following priority areas.

Effective treatment

The facility recognized the critical importance of ensuring that patients receive healthcare information in a manner they can understand, particularly in their preferred language. Effective communication is essential to delivering high-quality treatment and care, which in turn affects all-cause unplanned readmissions. To address this priority, the facility conducted a detailed review of interpreter service utilization and patient language needs.

An analysis of telephone interpreter calls by language and unit location revealed the following language distribution among patients: Spanish (96%), Farsi (1.2%), Arabic (0.7%), Mandarin (0.6%), Armenian (0.5%), Vietnamese (0.4%), Russian (0.46%), Punjabi (0.2%), Hindi (0.2%), and Korean (0.2%). This analysis underscored the need for reliable, readily available language support across the organization.

To ensure that all patients have the right to receive information in a manner they fully understand, the facility implemented Globo Interpreter—an integrated audio and video interpretation system. Each unit was equipped with dedicated Globo devices based on a 2023 facility-wide assessment conducted by the IT and clinical teams. This assessment evaluated interpreter needs, current usage patterns, and demographic data. This assessment data correlated with the unplanned readmission risk factors associated with language barriers.

As a result of this analysis, Globo Interpreter devices were strategically allocated to units with the highest demand, with a plan to reassess needs at least annually to ensure appropriate inventory levels as patient demographics evolve.

In addition, the facility expanded interpreter accessibility by integrating Globo's interpretation functionality into all staff Spectralink devices. This enhancement allows clinical and support staff to access interpreter services immediately at the point of care, improving real-time communication, patient understanding, treatment adherence, patient experience, and patient satisfaction.

Through these comprehensive efforts, including data-driven resource allocation, improved access to interpreter services, and ongoing monitoring, the facility strengthened its ability to provide effective,

equitable treatment to all patients, ultimately supporting better outcomes and reducing preventable readmissions.

Care coordination

During the reporting period, the facility identified a critical need to strengthen social services within our Care Coordination priority area. This need was underscored by findings from the All-Cause Unplanned 30-Day Hospital Readmission assessment, which revealed disparities in patient support and highlighted an increased demand for care coordination resources.

To address this need, the facility hired additional social workers and expanded the availability of social services to the entire patient population, including all unplanned admissions. We also provided enhanced LCSW-focused training to our social work team to support more comprehensive and clinically informed assessments.

The social services team conducted in-depth evaluations to determine patients' ability to safely manage care at home and identify barriers to successful recovery. These assessments included psychosocial evaluations; housing and placement support; linkage to primary care resources; substance use evaluations; hospice and palliative care assessments; and patient education on condition-specific care needs.

All patients identified through the all-cause unplanned 30-day hospital readmission list were evaluated by social services to identify gaps in support and opportunities to reduce readmissions. Additionally, all medium- and high-risk readmission patients were assessed by case management and referred to home health services whenever appropriate to enhance post-discharge continuity of care.

Access to care

In 2024, our facility's review of the all-cause, unplanned 30-day readmission scorecard revealed that approximately 33% of patients did not have a scheduled primary care follow-up. Contributing factors included lack of an established PCP, incomplete PCP information, financial and insurance barriers, and limited access to community resources.

The facility prioritized improving access to care by seeking proposals from qualified primary care clinics to develop a comprehensive Care Continuum Program that ensures seamless transitions from hospital discharge to outpatient care, enhances outcomes, and reduces avoidable readmissions.

To further expand access to primary care and address provider shortages, the facility collaborated with the UHS SoCal Medical Executive Consortium to establish a Graduate Medical Education (GME) Family Medicine Residency Program. This initiative directly responds to the documented shortage of family medicine providers in PRMC's Health Provider Shortage Area, where many residents are geographically isolated and medically vulnerable.

The residency's continuity clinic at Bartz-Altadonna, a Federally Qualified Health Center (FQHC), serves a diverse, multicultural, and underserved patient population, including uninsured and underinsured patients, homeless patients, and patients on Medi-Cal and Medicare. The clinic provides essential services, including diabetes and nutrition education, comprehensive prenatal care, CHDP physicals, mental health and substance use support, food insecurity programs, and VFC immunizations.

Overall, these initiatives significantly strengthen access to care by improving care transitions, expanding community partnerships, building a sustainable primary care workforce, and reducing all-cause unplanned readmission.

Methodology Guidelines

Did the hospital follow the methodology in the Measures Submission Guide? (Y/N)
