

Hospital Equity Measures Report

General Information

Report Type:	Hospital Equity Measures Report
Year:	2024
Hospital Name:	TORRANCE MEMORIAL MEDICAL CENTER
Facility Type:	General Acute Care Hospital
Hospital HCAI ID:	106190422
Report Period:	1/1/2024 - 12/31/2024
Status:	Complete
Due Date:	11/29/2025
Last Updated:	01/17/2026
Hospital Location with Clean Water and Air:	Y
Hospital Web Address for Equity Report:	www.torrancememorial.org

Overview

Assembly Bill No. 1204 requires the Department of Health Care Access and Information (HCAI) to develop and administer a Hospital Equity Measures Reporting Program to collect and post summaries of key hospital performance and patient outcome data regarding sociodemographic information, including but not limited to age, sex, race/ethnicity, payor type, language, disability status, and sexual orientation and gender identity.

Hospitals (general acute, children's, and acute psychiatric) and hospital systems are required to annually submit their reports to HCAI. These reports contain summaries of each measure, the top 10 disparities, and the equity plans to address the identified disparities. HCAI is required to maintain a link on the HCAI website that provides access to the content of hospital equity measures reports and equity plans to the public. All submitted hospitals are required to post their reports on their websites, as well.

Laws and Regulations

For more information on Assembly Bill No. 1204, please visit the following link by copying and pasting the URL into your web browser:

https://leginfo.legislature.ca.gov/faces/billTextClient.xhtml?bill_id=202120220AB1204

Hospital Equity Measures

Joint Commission Accreditation

General acute care hospitals are required to report three structural measures based on the Commission Accreditation's Health Care Disparities Reduction and Patient-Centered Communication Accreditation Standards. For more information on these measures, please visit the following link by copying and pasting the URL into your web browser:

<https://www.jointcommission.org/standards/r3-report/r3-report-issue-36-new-requirements-to-reduce>

-health-care-disparities/

The first two structural measures are scored as "yes" or "no"; the third structural measure comprises the percentages of patients by five categories of preferred languages spoken, in addition to one other/ unknown language category.

Designate an individual to lead hospital health equity activities (Y = Yes, N = No).

Y

Provide documentation of policy prohibiting discrimination (Y = Yes, N = No).

Y

Number of patients that were asked their preferred language, five defined categories and one other/ unknown languages category.

144830

Table 1. Summary of preferred languages reported by patients.

Languages	Number of patients who report preferring language	Total number of patients	Percentage of total patients who report preferring language (%)
English Language	131783	144830	91
Spanish Language	10069	144830	7
Asian Pacific Islander Languages	2276	144830	1.6
Middle Eastern Languages	358	144830	0.2
American Sign Language	17	144830	0
Other Languages	327	144830	0.2

Centers for Medicare & Medicaid Services (CMS) Hospital Commitment to Health Equity Structural (HCHE) Measure

There are five domains that make up the CMS Hospital Commitment to HCHE measures. Each domain is scored as "yes" or "no." In order to score "yes," a general acute care hospital is required to confirm all the domain's attestations. Lack of one or more of the attestations results in a score of "no." For more information on the CMS Hospital Commitment to HCHE measures, please visit the following link by copying and pasting the URL into your web browser:

<https://data.cms.gov/provider-data/topics/hospitals/health-equity>

Centers for Medicare & Medicaid Services (CMS) Hospital Commitment to Health Equity Structural (HCHE) Measure Domain 1: Strategic Planning (Yes/No)

- Our hospital strategic plan identifies priority populations who currently experience health disparities.
- Our hospital strategic plan identifies healthcare equity goals and discrete action steps to achieve these goals.
- Our hospital strategic plan outlines specific resources that have been dedicated to achieving our equity goals.
- Our hospital strategic plan describes our approach for engaging key stakeholders, such as community-based organizations.

Y

CMS HCHE Measure Domain 2: Data Collection (Yes/No)

- Our hospital strategic plan identifies healthcare equity goals and discrete action steps to achieve these goals.

- Our hospital has training for staff in culturally sensitive collection of demographics and/or social determinant of health information.
- Our hospital inputs demographic and/or social determinant of health information collected from patients into structured, interoperable data elements using a certified electronic health record (EHR) technology.

Y

CMS HCHE Measure Domain 3: Data Analysis (Yes/No)

- Our hospital stratifies key performance indicators by demographic and/or social determinants of health variables to identify equity gaps and includes this information in hospital performance dashboards.

Y

CMS HCHE Measure Domain 4: Quality Improvement (Yes/No)

- Our hospital participates in local, regional or national quality improvement activities focused on reducing health disparities.

Y

CMS HCHE Measure Domain 5: Leadership Engagement (Yes/No)

- Our hospital senior leadership, including chief executives and the entire hospital board of trustees, annually reviews our strategic plan for achieving health equity.
- Our hospital senior leadership, including chief executives and the entire hospital board of trustees, annually review key performance indicators stratified by demographic and/or social factors.

Y

Centers for Medicare & Medicaid Services (CMS) Social Drivers of Health (SDOH)

General acute care hospitals are required to report on rates of screenings and intervention rates among patients above 18 years old for five health related social needs (HRSN), which are food insecurity, housing instability, transportation problems, utility difficulties, and interpersonal safety. These rates are reported separately as being screened as positive for any of the five HRSNs, positive for each individual HRSN, and the intervention rate for each positively screened HRSN. For more information on the CMS SDOH, please visit the following link by copying and pasting the URL into your web browser:

<https://www.cms.gov/priorities/innovation/key-concepts/social-drivers-health-and-health-related-social-needs>

Number of patients admitted to an inpatient hospital stay who are 18 years or older on the date of admission and are screened for all of the five HRSN

26762

Total number of patients who are admitted to a hospital inpatient stay and who are 18 years or older on the date of admission

30551

Rate of patients admitted for an inpatient hospital stay who are 18 years or older on the date of admission, were screened for an HRSN, and who screened positive for one or more of the HRSNs

87.6

Table 2. Positive screening rates and intervention rates for the five Health Related Social Needs of the Centers of Medicare & Medicaid Services (CMS) Social Drivers of Health (SDOH).

Social Driver of Health	Number of positive screenings	Rate of positive screenings (%)	Number of positive screenings who received intervention	Rate of positive screenings who received intervention (%)
Food Insecurity	243	0.9		
Housing Instability	1025	3.8		
Transportation Problems	702	2.6		
Utility Difficulties	172	0.6		
Interpersonal Safety	238	0.9		

Core Quality Measures for General Acute Care Hospitals

There are two quality measures from the Hospital Consumer Assessment of Healthcare Providers and Systems (HCAHPS) survey. For more information on the HCAHPS survey, please visit the following link by copying and pasting the URL into your web browser:

<https://hcahpsonline.org/en/survey-instruments/>

Patient Recommends Hospital

The first HCAHPS quality measure is the percentage of patients who would recommend the hospital to friends and family. For this measure, general acute care hospitals provide the percentage of patient respondents who responded "probably yes" or "definitely yes" to whether they would recommend the hospital, the percentage of the people who responded to the survey (i.e., the response rate), and the inputs for the percentages. The percentages and inputs are stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding HCAHPS question number is 19.

Number of respondents who replied "probably yes" or "definitely yes" to HCAHPS Question 19, "Would you recommend this hospital to your friends and family?"

2146

Total number of respondents to HCAHPS Question 19

2212

Percentage of total respondents who responded "probably yes" or "definitely yes" to HCAHPS Question 19

97

Total number of people surveyed on HCAHPS Question 19

9217

Response rate, or the percentage of people who responded to HCAHPS Question 19

24

Table 3. Patient recommends hospital by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

Race and/or Ethnicity	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
American Indian or Alaska Native					
Asian					
Black or African American					
Hispanic or Latino					
Middle Eastern or North African					
Multiracial and/or Multiethnic (two or more races)					
Native Hawaiian or Pacific Islander					
White					

Age	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Age < 18					
Age 18 to 34					
Age 35 to 49					
Age 50 to 64					
Age 65 Years and Older					

Sex assigned at birth	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Female					
Male					
Unknown					

Payer Type	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Medicare					
Medicaid					
Private					
Self-Pay					
Other					

Preferred Language	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)

Female-to-male (FTM)/ transgender male/trans man					
Male					
Male-to-female (MTF)/ transgender female/trans woman					
Non-conforming gender					
Additional gender category or other					
Not disclosed					

Patient Received Information in Writing

The second HCAHPS quality measure is the percentage of patients who reported receiving information in writing on symptoms and health problems to look out for after leaving the hospital. General acute care hospitals are required to provide the percentage of patient respondents who responded "yes" to being provided written information, the percentage of the people who responded to the survey (i.e., the response rate), and the inputs for these percentages. These percentages and inputs are stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding HCAHPS question number is 17.

Number of respondents who replied "yes" to HCAHPS Question 17, "During this hospital stay, did you get information in writing about what symptoms or health problems to look out for after you left the

hospital?"

1902
Total number of respondents to HCAHPS Question 17
2212

Percentage of respondents who responded "yes" to HCAHPS Question 17
86

Total number of people surveyed on HCAHPS Question 17
9217

Response rate, or the percentage of people who responded to HCAHPS Question 17
24

Table 4. Patient reports receiving information in writing about symptoms or health problems by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

Race and/or Ethnicity	Number of "yes" responses	Total number of responses	Percentage of "yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)

Agency for Healthcare Research and Quality (AHRQ) Indicators

General acute care hospitals are required to report on two indicators from the Agency for Healthcare Research and Quality (AHRQ). For general information about AHRQ indicators, please visit the following link by copying and pasting the URL into your web browser:

<https://qualityindicators.ahrq.gov/>

Pneumonia Mortality Rate

The Pneumonia Mortality Rate is defined as the rate of in-hospital deaths per 1,000 hospital discharges with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission for patients ages 18 years and older. General acute care hospitals report the Pneumonia Mortality Rate by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding AHRQ Inpatient Quality Indicator is 20. For more information about this indicator, please visit the following link by copying and pasting the URL into your web browser:

https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_20_Pneumonia_Mortality_Rate.pdf

Number of in-hospital deaths with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission

67

Total number of hospital discharges with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission

957

Rate of in-hospital deaths per 1,000 hospital discharges with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission

70

Death Rate among Surgical Inpatients with Serious Treatable Complications

The Death Rate among Surgical Inpatients with Serious Treatable Complications is defined as the rate of in-hospital deaths per 1,000 surgical discharges among patients ages 18-89 years old or obstetric patients with serious treatable complications. General acute care hospitals report this measure by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding AHRQ Patient Safety Indicator is 04. For more information about this indicator, please visit the following link by copying and pasting the URL into your web browser:
https://qualityindicators.ahrq.gov/Downloads/Modules/PSI/V2023/TechSpecs/PSI_04_Death_Rate_among_Surgical_Inpatients_with_Serious_Treatable_Complications.pdf

California Maternal Quality Care Collaborative (CMQCC) Core Quality Measures

There are three core quality maternal measures adopted from the California Maternal Quality Care Collaborative (CMQCC).

CMQCC Nulliparous, Term, Singleton, Vertex (NTSV) Cesarean Birth Rate

The CMQCC Nulliparous, Term, Singleton, Vertex (NTSV) Cesarean Birth Rate is defined as nulliparous women with a term (at least 37 weeks gestation), singleton baby in a vertex position delivered by cesarian birth. General acute care hospitals report the NTSV Cesarean Birth Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. For more information, please visit the following link by copying and pasting the URL into your web browser:

CMQCC Vaginal Birth After Cesarean (VBAC) Rate

The CMQCC Vaginal Birth After Cesarean (VBAC) Rate is defined as vaginal births per 1,000 deliveries by patients with previous Cesarean deliveries. General acute care hospitals report the VBAC Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The VBAC Rate uses the specifications of AHRQ Inpatient Quality Indicator 22. For more information, please visit the following link by copying and pasting the URL into your web browser:

[https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_22_Vaginal_Birth_After_Cesarean_\(VBAC\)_Delivery_Rate_Uncomplicated.pdf](https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_22_Vaginal_Birth_After_Cesarean_(VBAC)_Delivery_Rate_Uncomplicated.pdf)

CMQCC Exclusive Breast Milk Feeding Rate

The CMQCC Exclusive Breast Milk Feeding Rate is defined as the newborns per 100 who reached at least 37 weeks of gestation (or 3000g if gestational age is missing) who received breast milk

exclusively during their stay at the hospital. Other criteria are that the newborns did not go to the neonatal intensive care unit (NICU), transfer, or die, did not reflect multiple gestation, and did not have codes for parenteral nutrition or galactosemia. General acute care hospitals report the Exclusive Breast Milk Feeding Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The CMQCC Exclusive Breast Milk Feeding Rate uses the Joint Commission National Quality Measure PC-05. For more information, please visit the following link by copying and pasting the URL into your web browser: <https://manual.jointcommission.org/releases/TJC2024B/MIF0170.html>

Number of newborn cases that were exclusively fed breast milk during their hospital stay and meet the inclusion and exclusion criteria

HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate

General acute care hospitals are required to report several HCAI All-Cause Unplanned 30-Day Hospital Readmission Rates, which are broadly defined as the percentage of hospital-level, unplanned, all-cause readmissions after admission for eligible conditions within 30 days of hospital discharge for patients aged 18 years and older. These rates are first stratified based on any eligible condition, mental health disorders, substance use disorders, co-occurring disorders, and no behavioral health diagnosis. Then, each condition-stratified hospital readmission rate is further stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. For more information on the HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate, please visit the following link by copying and pasting the URL into your web browser:

https://hcai.ca.gov/wp-content/uploads/2024/10/HCAI-All-Cause-Readmission-Rate-Exclusions_ADA.pdf

HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate – Any Eligible Condition

Number of inpatient hospital admissions which occurs within 30 days of the discharge date of an eligible index admission and were 18 years or older at time of admission

2430

Total number of patients who were admitted to the general acute care hospital and were 18 years or older at time of admission

18824

Rate of hospital-level, unplanned, all-cause readmissions after admission for any eligible condition

within 30 days of hospital discharge for patients aged 18 and older

12.9

Table 10. HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate for any eligible condition by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

Health Equity Plan

All general acute care hospitals report a health equity plan that identifies the top 10 disparities and a written plan to address them.

Top 10 Disparities

Disparities for each hospital equity measure are identified by comparing the rate ratios by stratification groups. Rate ratios are calculated differently for measures with preferred low rates and those with preferred high rates. Rate ratios are calculated after applying the California Health and Human Services Agency's "Data De-Identification Guidelines (DDG)," dated September 23, 2016.

Table 15. Top 10 disparities and their rate ratio values.

Measures	Stratifications	Stratification Group	Stratification Rate	Reference Group	Reference Rate	Rate Ratio
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Age (excluding maternal measures)	65 and older	14.4	18 to 34	7.1	2
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Age (excluding maternal measures)	50 to 64	13.5	18 to 34	7.1	1.9
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Expected Payor	Medicare	15.7	Private	8.3	1.9
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Expected Payor	Medicaid	12.6	Private	8.3	1.5
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Age (excluding maternal measures)	35 to 49	10.6	18 to 34	7.1	1.5
AHRQ Patient Safety Indicator Death Rate among Surgical Inpatients with Serious Treatable Complications	Sex Assigned at Birth	Male	204.3	Female	138.3	1.5
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate, stratified by behavioral health diagnosis (No Behavioral Health Diagnosis)	Sex Assigned at Birth	Male	14.3	Female	10.4	1.4
AHRQ Patient Safety Indicator Death Rate among Surgical Inpatients with Serious Treatable Complications	Age (excluding maternal measures)	50 to 64	222.2	65 and older	165.2	1.3
CMQCC Exclusive Breast Milk Feeding	Race and/or Ethnicity	Hispanic or Latino	57	White	74.6	1.3
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Sex Assigned at Birth	Male	15	Female	11.6	1.3

Plan to address disparities identified in the data

Torrance Memorial is committed to creating an inclusive, patient-centered environment where every individual receives care that respects their unique needs and preferences. While we remain dedicated to ensuring equitable care for all patients, recent data trends have highlighted areas where additional focus may help strengthen equity across our health system. Over the next 12 months, we will continue to evaluate these potential opportunities and implement strategies that support equitable access and outcomes for all those we serve.

To address all-cause unplanned 30-day readmissions, we will continue to embed equity and patient-centered care into every stage of the patient experience, with additional focus on populations that may be at higher risk, including Medicare and Medicaid patients, males with behavioral health diagnoses, and patients 30 years of age and older. We will also ensure patients receive culturally and linguistically appropriate education, interpreter services, and access to support groups that strengthen understanding and self-management after discharge. Safety practice, including unconscious bias training, stratified outcome monitoring, and preventive community programs ensure equitable care. By integrating equity across care delivery, addressing social needs, and ensuring continuity beyond discharge, Torrance Memorial is reducing disparities in readmissions. With clear metrics and strong accountability, this plan provides a sustainable framework for advancing health equity and improving patient outcomes.

Building on this commitment to equitable care, Torrance Memorial is also addressing disparities in maternal and infant health, specifically the lower exclusive breastfeeding rates among Hispanic and Latina mothers. Torrance Memorial is committed to advancing maternal and infant health equity by addressing disparities in the exclusive breast milk feeding measure. Recognizing cultural, linguistic, and socioeconomic barriers to exclusive breastfeeding, the medical center integrates equity-focused strategies across patient education, clinical support, and community outreach.

Similarly, improving outcomes for surgical patients remains a key priority. The AHRQ PSI 4 measure tracks mortality among surgical inpatients with serious but treatable complications. Data indicate that males and patients aged 50 to 64 are disproportionately affected. To address disparities in the AHRQ PSI 4 measure, Torrance Memorial will continue to focus on key strategies implemented for all patients including culturally responsive patient education, stratified outcome tracking, and staff training on early detection of complications.

By integrating safety, equity, and care coordination, Torrance Memorial is improving outcomes while advancing overall patient safety and equity for all patients who entrust our health system with their care.

Performance in the priority area

General acute care hospitals are required to provide hospital equity plans that address the top 10 disparities by identifying population impact and providing measurable objectives and specific timeframes. For each disparity, hospital equity plans will address performance across priority areas: person-centered care, patient safety, addressing patient social drivers of health, effective treatment, care coordination, and access to care.

Person-centered care

Torrance Memorial is committed to creating an inclusive, patient-centered environment where every individual receives care that respects their unique needs and preferences. The medical center website includes ADA accommodations and language translation tools, ensuring digital accessibility for all. Interpreter services, including certified use of Language Line, are required for patients and visitors who are non-English speaking or hearing-impaired. Preventive care education is delivered through culturally sensitive and language-appropriate materials, with additional support provided through collaborations with trusted partners such as First 5 LA, YMCA, and the Boys & Girls Club. The Patient Safety team reviews complaints independently to identify inequities and has streamlined processes to ensure faster response times. To strengthen communication, Spanish medical terminology classes are available for staff. Beyond clinical care, patients benefit from a wide variety of support services including groups for chronic illness, cancer, grief, caregiving, meditation, and weight management. New parents and families are supported through lactation clinics, free baby weight checks, breast pumps for under-resourced mothers, and classes in childbirth, breastfeeding, infant CPR, prenatal yoga, and newborn care. Health education resources are available in multiple languages to ensure equity in access to information.

Patient safety

Patient safety is a core priority at Torrance Memorial, with a strong emphasis on equity in care delivery. All safety data is stratified by race, ethnicity, gender, and primary language to identify disparities and guide improvement efforts. The hospital actively participates in statewide collaboratives to exchange best practices and advance equitable care. TeamSTEPPS, an evidence-based framework to optimize team performance across the healthcare delivery system, has been

adopted system-wide to strengthen communication and reduce bias in patient interactions, complemented by mandatory unconscious bias training for all staff. Continuous data monitoring ensures disparities are promptly addressed. Safety extends beyond the hospital walls through the Public Access Defibrillation Program, which maintains 80 AEDs across more than 30 community sites, and community education programs such as CPR and first aid training. At-risk patients benefit from free asthma kits, further demonstrating Torrance Memorial's proactive approach to safety and prevention.

Addressing patient social drivers of health

Recognizing that health is shaped by more than medical care, Torrance Memorial integrates social determinants of health (SDOH) screening and support into patient care. SDOH questions are part of inpatient admission assessments, enabling earlier intervention. In 2024, 2,282 patients were connected to social service resources, with Community Health Workers providing distress screenings, Medi-Cal and CalFresh enrollment, IHSS (In-Home Supportive Services), and transportation assistance. Social workers collaborate with agencies such as Project Angel Food, Medi-Cal, and senior centers to address basic needs. Community contributions include two tons of food collected through hospital food drives, more than 5,000 surplus meals donated, and seasonal programs such as distributing Thanksgiving turkeys and chickens to local food pantries. Programs like Healthy Ever After, offered through schools and the Boys & Girls Club, focus on childhood obesity prevention through nutrition education. For unhoused patients, the Homeless Patient Navigator facilitates connections to housing and recuperative care, while the Caring Closet provides clothing, shoes, and support for psychiatric hospitalizations. These initiatives underscore Torrance Memorial's role as a health partner both inside and outside the hospital setting.

Performance in the priority area continued

Performance across all of the following priority areas.

Effective treatment

Torrance Memorial ensures treatment is both effective and equitable by combining clinical excellence with cultural competence. Staff regularly attend national conferences such as AAHPM (American Assembly of Hospice and Palliative Care) and CAPC (Center to Advance Palliative Care), while participating in ongoing training on cultural competence and health equity. A key initiative includes participation in the CMQCC (California Maternal Quality Care Collaborative) "Learning Initiative to Support Vaginal Birth through an Equity Lens," which seeks to reduce C-section disparities disproportionately affecting Black women. Patients benefit from access to educational lectures on chronic conditions including diabetes, COPD, lipid management, and cancer. Support groups provide a community of care for individuals with diabetes, stroke, cancer, and lung disease. In addition, preventive screenings are prioritized, with free lung cancer screenings and FIT kits for gastrointestinal cancer distributed at community events. This holistic approach ensures that effective treatment is paired with outreach, education, and equity-focused practice.

Care coordination

Care coordination at Torrance Memorial is designed to reduce disparities and streamline care through Lean methodology. A readmission risk tool helps clinicians identify and address barriers to safe discharge, while Community Health Workers (CHWs) provide tailored support for unhoused, uninsured, and underinsured patients. Specialized maternal and infant care coordination includes a high-risk committee and a Birth Navigator program that supports families before and after delivery. Transportation assistance is offered to patients with limited resources, ensuring access to follow-up care needed. CHWs also help patients enroll in Medi-Cal, CalFresh, and IHSS (In-Home Supportive

Services), while providing referrals for mental health and social support services. Case management and social work extend support beyond the hospital, ensuring continuity of care for under-resourced populations. Torrance Memorial also participates in a South Bay hospital coalition addressing homelessness and partners with local school districts on initiatives related to obesity prevention, health education, and drug prevention.

Access to care

Torrance Memorial prioritizes equitable access to care through financial assistance, insurance support, and community-based outreach. Social services teams help patients secure urgent Medi-Cal coverage, with CHWs and health advocates providing insurance education and enrollment support. In the past year, 366 Medi-Cal enrollments and 36 Fair Hearings were successfully completed. The Financial Assistance Program ensures that uninsured or underinsured patients receive free or discounted care in alignment with hospital policy. Translation services, including certified interpreters and multilingual forms for POLST and Advance Directives, ensure accessibility for all patients. The hospital utilizes certified Language Line interpreters to support bilingual patients. Access is further expanded through telehealth appointments, transportation assistance, and community education offered at health fairs, baby showers, SIDS awareness events, and Medicare choice classes. Free health screenings—including vision, dental, blood pressure, BMI, anemia, glucose, and cholesterol checks—are provided at community events to reach those most at risk.

Methodology Guidelines

Did the hospital follow the methodology in the Measures Submission Guide? (Y/N)
