

Hospital Equity Measures Report

General Information

Report Type:	Hospital Equity Measures Report
Year:	2024
Hospital Name:	FAIRMONT HOSPITAL
Facility Type:	General Acute Care Hospital
Hospital HCAI ID:	106010811
Report Period:	01/01/2024 - 12/31/2024
Status:	Complete
Due Date:	11/29/2025
Last Updated:	01/13/2026
Hospital Location with Clean Water and Air:	Y
Hospital Web Address for Equity Report:	https://www.alamedahealthsystem.org/

Overview

Assembly Bill No. 1204 requires the Department of Health Care Access and Information (HCAI) to develop and administer a Hospital Equity Measures Reporting Program to collect and post summaries of key hospital performance and patient outcome data regarding sociodemographic information, including but not limited to age, sex, race/ethnicity, payor type, language, disability status, and sexual orientation and gender identity.

Hospitals (general acute, children's, and acute psychiatric) and hospital systems are required to annually submit their reports to HCAI. These reports contain summaries of each measure, the top 10 disparities, and the equity plans to address the identified disparities. HCAI is required to maintain a link on the HCAI website that provides access to the content of hospital equity measures reports and equity plans to the public. All submitted hospitals are required to post their reports on their websites, as well.

Laws and Regulations

For more information on Assembly Bill No. 1204, please visit the following link by copying and pasting the URL into your web browser:

https://leginfo.legislature.ca.gov/faces/billTextClient.xhtml?bill_id=202120220AB1204

Hospital Equity Measures

Joint Commission Accreditation

General acute care hospitals are required to report three structural measures based on the Commission Accreditation's Health Care Disparities Reduction and Patient-Centered Communication Accreditation Standards. For more information on these measures, please visit the following link by copying and pasting the URL into your web browser:

<https://www.jointcommission.org/standards/r3-report/r3-report-issue-36-new-requirements-to-reduce>

-health-care-disparities/

The first two structural measures are scored as "yes" or "no"; the third structural measure comprises the percentages of patients by five categories of preferred languages spoken, in addition to one other/unknown language category.

Designate an individual to lead hospital health equity activities (Y = Yes, N = No).

Y

Provide documentation of policy prohibiting discrimination (Y = Yes, N = No).

Y

Number of patients that were asked their preferred language, five defined categories and one other/unknown languages category.

102150

Table 1. Summary of preferred languages reported by patients.

Languages	Number of patients who report preferring language	Total number of patients	Percentage of total patients who report preferring language (%)
English Language	66289	102150	64.9
Spanish Language	28143	102150	27.6
Asian Pacific Islander Languages	3585	102150	3.5
Middle Eastern Languages	1484	102150	1.5
American Sign Language	65	102150	0.1
Other Languages	2584	102150	2.5

Centers for Medicare & Medicaid Services (CMS) Hospital Commitment to Health Equity Structural (HCHE) Measure

There are five domains that make up the CMS Hospital Commitment to HCHE measures. Each domain is scored as "yes" or "no." In order to score "yes," a general acute care hospital is required to confirm all the domain's attestations. Lack of one or more of the attestations results in a score of "no." For more information on the CMS Hospital Commitment to HCHE measures, please visit the following link by copying and pasting the URL into your web browser:

<https://data.cms.gov/provider-data/topics/hospitals/health-equity>

Centers for Medicare & Medicaid Services (CMS) Hospital Commitment to Health Equity Structural (HCHE) Measure Domain 1: Strategic Planning (Yes/No)

- Our hospital strategic plan identifies priority populations who currently experience health disparities.
- Our hospital strategic plan identifies healthcare equity goals and discrete action steps to achieve these goals.
- Our hospital strategic plan outlines specific resources that have been dedicated to achieving our equity goals.
- Our hospital strategic plan describes our approach for engaging key stakeholders, such as community-based organizations.

N

CMS HCHE Measure Domain 2: Data Collection (Yes/No)

- Our hospital strategic plan identifies healthcare equity goals and discrete action steps to achieve these goals.

- Our hospital has training for staff in culturally sensitive collection of demographics and/or social determinant of health information.
- Our hospital inputs demographic and/or social determinant of health information collected from patients into structured, interoperable data elements using a certified electronic health record (EHR) technology.

Y

CMS HCHE Measure Domain 3: Data Analysis (Yes/No)

- Our hospital stratifies key performance indicators by demographic and/or social determinants of health variables to identify equity gaps and includes this information in hospital performance dashboards.

Y

CMS HCHE Measure Domain 4: Quality Improvement (Yes/No)

- Our hospital participates in local, regional or national quality improvement activities focused on reducing health disparities.

Y

CMS HCHE Measure Domain 5: Leadership Engagement (Yes/No)

- Our hospital senior leadership, including chief executives and the entire hospital board of trustees, annually reviews our strategic plan for achieving health equity.
- Our hospital senior leadership, including chief executives and the entire hospital board of trustees, annually review key performance indicators stratified by demographic and/or social factors.

N

Centers for Medicare & Medicaid Services (CMS) Social Drivers of Health (SDOH)

General acute care hospitals are required to report on rates of screenings and intervention rates among patients above 18 years old for five health related social needs (HRSN), which are food insecurity, housing instability, transportation problems, utility difficulties, and interpersonal safety. These rates are reported separately as being screened as positive for any of the five HRSNs, positive for each individual HRSN, and the intervention rate for each positively screened HRSN. For more information on the CMS SDOH, please visit the following link by copying and pasting the URL into your web browser:

<https://www.cms.gov/priorities/innovation/key-concepts/social-drivers-health-and-health-related-social-needs>

Number of patients admitted to an inpatient hospital stay who are 18 years or older on the date of admission and are screened for all of the five HRSN

0

Total number of patients who are admitted to a hospital inpatient stay and who are 18 years or older on the date of admission

163

Rate of patients admitted for an inpatient hospital stay who are 18 years or older on the date of admission, were screened for an HRSN, and who screened positive for one or more of the HRSNs

0.0

Table 2. Positive screening rates and intervention rates for the five Health Related Social Needs of the Centers of Medicare & Medicaid Services (CMS) Social Drivers of Health (SDOH).

Social Driver of Health	Number of positive screenings	Rate of positive screenings (%)	Number of positive screenings who received intervention	Rate of positive screenings who received intervention (%)
Food Insecurity	0	0.0	0	
Housing Instability	0	0.0	0	
Transportation Problems	0	0.0	0	
Utility Difficulties	0	0.0	0	
Interpersonal Safety	0	0.0	0	

Core Quality Measures for General Acute Care Hospitals

There are two quality measures from the Hospital Consumer Assessment of Healthcare Providers and Systems (HCAHPS) survey. For more information on the HCAHPS survey, please visit the following link by copying and pasting the URL into your web browser:

<https://hcahpsonline.org/en/survey-instruments/>

Patient Recommends Hospital

The first HCAHPS quality measure is the percentage of patients who would recommend the hospital to friends and family. For this measure, general acute care hospitals provide the percentage of patient respondents who responded "probably yes" or "definitely yes" to whether they would recommend the hospital, the percentage of the people who responded to the survey (i.e., the response rate), and the inputs for the percentages. The percentages and inputs are stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding HCAHPS question number is 19.

Number of respondents who replied "probably yes" or "definitely yes" to HCAHPS Question 19, "Would you recommend this hospital to your friends and family?"

2045

Total number of respondents to HCAHPS Question 19

2223

Percentage of total respondents who responded "probably yes" or "definitely yes" to HCAHPS Question 19

92.0

Total number of people surveyed on HCAHPS Question 19

8233

Response rate, or the percentage of people who responded to HCAHPS Question 19

27.0

Table 3. Patient recommends hospital by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

Race and/or Ethnicity	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
American Indian or Alaska Native					
Asian					
Black or African American					
Hispanic or Latino					
Middle Eastern or North African					
Multiracial and/or Multiethnic (two or more races)					
Native Hawaiian or Pacific Islander					
White					

Age	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Age < 18					
Age 18 to 34					
Age 35 to 49					
Age 50 to 64					
Age 65 Years and Older					

Sex assigned at birth	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Female					
Male					
Unknown					

Payer Type	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Medicare					
Medicaid					
Private					
Self-Pay					
Other					

Preferred Language	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
English Language					
Spanish Language					
Asian Pacific Islander Languages					
Middle Eastern Languages					
American Sign Language

Female-to-male (FTM)/ transgender male/trans man					
Male					
Male-to-female (MTF)/ transgender female/trans woman					
Non-conforming gender					
Additional gender category or other					
Not disclosed					

Patient Received Information in Writing

The second HCAHPS quality measure is the percentage of patients who reported receiving information in writing on symptoms and health problems to look out for after leaving the hospital. General acute care hospitals are required to provide the percentage of patient respondents who responded "yes" to being provided written information, the percentage of the people who responded to the survey (i.e., the response rate), and the inputs for these percentages. These percentages and inputs are stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding HCAHPS question number is 17.

Number of respondents who replied "yes" to HCAHPS Question 17, "During this hospital stay, did you get information in writing about what symptoms or health problems to look out for after you left the

hospital?"

1845
Total number of respondents to HCAHPS Question 17
2223

Percentage of respondents who responded "yes" to HCAHPS Question 17
83.0

Total number of people surveyed on HCAHPS Question 17
8233

Response rate, or the percentage of people who responded to HCAHPS Question 17
27.0

Table 4. Patient reports receiving information in writing about symptoms or health problems by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

Race and/or Ethnicity	Number of "yes" responses	Total number of responses	Percentage of "yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)

Agency for Healthcare Research and Quality (AHRQ) Indicators

General acute care hospitals are required to report on two indicators from the Agency for Healthcare Research and Quality (AHRQ). For general information about AHRQ indicators, please visit the following link by copying and pasting the URL into your web browser:

<https://qualityindicators.ahrq.gov/>

Pneumonia Mortality Rate

The Pneumonia Mortality Rate is defined as the rate of in-hospital deaths per 1,000 hospital discharges with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission for patients ages 18 years and older. General acute care hospitals report the Pneumonia Mortality Rate by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding AHRQ Inpatient Quality Indicator is 20. For more information about this indicator, please visit the following link by copying and pasting the URL into your web browser:

https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_20_Pneumonia_Mortality_Rate.pdf

Number of in-hospital deaths with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission

20

Total number of hospital discharges with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission

408

Rate of in-hospital deaths per 1,000 hospital discharges with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission

49.0

Death Rate among Surgical Inpatients with Serious Treatable Complications

The Death Rate among Surgical Inpatients with Serious Treatable Complications is defined as the rate of in-hospital deaths per 1,000 surgical discharges among patients ages 18-89 years old or obstetric patients with serious treatable complications. General acute care hospitals report this measure by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding AHRQ Patient Safety Indicator is 04. For more information about this indicator, please visit the following link by copying and pasting the URL into your web browser:

California Maternal Quality Care Collaborative (CMQCC) Core Quality Measures

There are three core quality maternal measures adopted from the California Maternal Quality Care Collaborative (CMQCC).

CMQCC Nulliparous, Term, Singleton, Vertex (NTSV) Cesarean Birth Rate

The CMQCC Nulliparous, Term, Singleton, Vertex (NTSV) Cesarean Birth Rate is defined as nulliparous women with a term (at least 37 weeks gestation), singleton baby in a vertex position delivered by cesarian birth. General acute care hospitals report the NTSV Cesarean Birth Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. For more information, please visit the following link by copying and pasting the URL into your web browser:

<https://www.cmqcc.org/quality-improvement-toolkits/supporting-vaginal-birth/ntsv-cesarean-birth-measure-specifications>

Number of NTSV patients with Cesarean deliveries

166

CMQCC Vaginal Birth After Cesarean (VBAC) Rate

The CMQCC Vaginal Birth After Cesarean (VBAC) Rate is defined as vaginal births per 1,000 deliveries by patients with previous Cesarean deliveries. General acute care hospitals report the VBAC Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The VBAC Rate uses the specifications of AHRQ Inpatient Quality Indicator 22. For more information, please visit the following link by copying and pasting the URL into your web browser:

[https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_22_Vaginal_Birth_After_Cesarean_\(VBAC\)_Delivery_Rate_Uncomplicated.pdf](https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_22_Vaginal_Birth_After_Cesarean_(VBAC)_Delivery_Rate_Uncomplicated.pdf)

CMQCC Exclusive Breast Milk Feeding Rate

The CMQCC Exclusive Breast Milk Feeding Rate is defined as the newborns per 100 who reached at least 37 weeks of gestation (or 3000g if gestational age is missing) who received breast milk

exclusively during their stay at the hospital. Other criteria are that the newborns did not go to the neonatal intensive care unit (NICU), transfer, or die, did not reflect multiple gestation, and did not have codes for parenteral nutrition or galactosemia. General acute care hospitals report the Exclusive Breast Milk Feeding Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The CMQCC Exclusive Breast Milk Feeding Rate uses the Joint Commission National Quality Measure PC-05. For more information, please visit the following link by copying and pasting the URL into your web browser:
<https://manual.jointcommission.org/releases/TJC2024B/MIF0170.html>

Number of newborn cases that were exclusively fed breast milk during their hospital stay and meet the inclusion and exclusion criteria

HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate

General acute care hospitals are required to report several HCAI All-Cause Unplanned 30-Day Hospital Readmission Rates, which are broadly defined as the percentage of hospital-level, unplanned, all-cause readmissions after admission for eligible conditions within 30 days of hospital discharge for patients aged 18 years and older. These rates are first stratified based on any eligible condition, mental health disorders, substance use disorders, co-occurring disorders, and no behavioral health diagnosis. Then, each condition-stratified hospital readmission rate is further stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. For more information on the HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate, please visit the following link by copying and pasting the URL into your web browser:

https://hcai.ca.gov/wp-content/uploads/2024/10/HCAI-All-Cause-Readmission-Rate-Exclusions_ADA.pdf

HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate – Any Eligible Condition

Number of inpatient hospital admissions which occurs within 30 days of the discharge date of an eligible index admission and were 18 years or older at time of admission

1299

Total number of patients who were admitted to the general acute care hospital and were 18 years or older at time of admission

7782

Rate of hospital-level, unplanned, all-cause readmissions after admission for any eligible condition

within 30 days of hospital discharge for patients aged 18 and older

16.7

Table 10. HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate for any eligible condition by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

Race and/or Ethnicity	Number of inpatient readmissions	Total number of admitted patients	Readmission rate (%)
American Indian or Alaska Native	suppressed	suppressed	suppressed

Health Equity Plan

All general acute care hospitals report a health equity plan that identifies the top 10 disparities and a written plan to address them.

Top 10 Disparities

Disparities for each hospital equity measure are identified by comparing the rate ratios by stratification groups. Rate ratios are calculated differently for measures with preferred low rates and those with preferred high rates. Rate ratios are calculated after applying the California Health and Human Services Agency's "Data De-Identification Guidelines (DDG)," dated September 23, 2016.

Table 15. Top 10 disparities and their rate ratio values.

Measures	Stratifications	Stratification Group	Stratification Rate	Reference Group	Reference Rate	Rate Ratio
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Expected Payor	Medicare	20.2	Private	8.2	2.5
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Expected Payor	Medicaid	15.4	Private	8.2	1.9
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Age (excluding maternal measures)			18 to 34	11.1	1.7
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Age (excluding maternal measures)			18 to 34	11.1	1.7
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Race and/or Ethnicity			Hispanic or Latino	12.8	1.6
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Preferred Language			Spanish Language	11.7	1.5
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Age (excluding maternal measures)	35 to 49	16.7	18 to 34	11.1	1.5
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Race and/or Ethnicity			Hispanic or Latino	12.8	1.3
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Race and/or Ethnicity	White	15.3	Hispanic or Latino	12.8	1.2
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Race and/or Ethnicity	Asian	13.6	Hispanic or Latino	12.8	1.1

Plan to address disparities identified in the data

In recognition of our aging population, particularly within Alameda Hospital, AHS started in June 2024 the SNF Collaborative. The goal is to strengthen the relationship between community SNF partners and our AHS facilities to address readmission disparities, promote palliative care, initiate advanced care planning, and ensure patient preferences are honored. Palliative care resources at Alameda Hospital will expand to outpatient in early 2026 providing additional opportunities to collaborate with our SNF partners. In addition to our resources, we have made available to our Medicare patients ONclick Healthcare, which is a transitional care resource that ensures their needs are being met post-discharge. From the convenience of home, and through an assigned care counselor, patients will have access to care continuity, coordinated care with physicians, prescription management, patient education, symptoms management, access to community resources, and transportation to appointments.

We see a greater prevalence of readmissions in our Black or African American, White, Native Hawaiian or Pacific Islander, and Asian groups. While this correlates with readmission rates, we do not believe this is a causal factor but rather reflects differences in underlying clinical and social factors. Many patients in our population experience multiple comorbidities—such as diabetes, heart failure, renal failure, and polysubstance use—that contribute to readmission risk. To reduce avoidable readmissions, we are focused on strengthening post-hospitalization care coordination and improving connections to complex care teams. These services and resources are available to all AHS patients, with support tailored to each patient’s medical and social needs. We are strengthening our partnership with Alameda Alliance and the Community Health Center Network (CHCN) to bolster care coordination for patients who receive follow up care external to AHS. Additionally, our case managers have access to the Readmission Assessment tool in Epic to identify patients who may benefit from enhanced case management or community health advocate

resources. Lastly, to address readmissions among the unhoused population, AHS contracted with Cardea Health. Cardea operates a medically supported shelter in Alameda that opened in May 2023. This program serves patients who would benefit from a safe environment for recuperation and continued access to medical and social support services.

Performance in the priority area

General acute care hospitals are required to provide hospital equity plans that address the top 10 disparities by identifying population impact and providing measurable objectives and specific timeframes. For each disparity, hospital equity plans will address performance across priority areas: person-centered care, patient safety, addressing patient social drivers of health, effective treatment, care coordination, and access to care.

Person-centered care

Our commitment to person-centered care is grounded in listening to and partnering with our patients and families. Through our multimodal approach to patient experience improvement work, we focus not only on clinical best practices, but on elevating patient voice so that care reflects the diverse needs of the communities we serve.

Patient experiences and stories are shared through quantitative and qualitative patient feedback gathered across all service lines. These stories, gathered across different points of the care journey, keep us focused on what matters most to patients and are utilized by department leaders regularly to track trends, and to highlight both the successes and areas of opportunities. Patient narratives are also used to help empower and engage our care teams from daily huddles to larger patient experience improvement strategies and projects.

We also gather real-time patient and family feedback through our established and expanding daily Leader Patient Rounding programs where patients are asked questions related to service and whether the patient needs are met. Questions like “What is most important to you today?” help guide real-time care decisions and service recovery to ensure that individual patient needs are honored. The daily leader rounding on patients also provides additional opportunity to ensure patients feel respected, supported, and valued throughout their journey.

At an even deeper level of elevating the patient voice, we are continuing to expand and embed true partnership and co-design with our patients into our system improvement work. Patients and family members participate directly in our system Patient and Family Advisory council where advisors collaborate with our department leaders directly to help design solutions that better meet the needs of our patient population. These projects vary from things like clinical tool creations like communication tools and education that drive transparency and trust with our patients, to large scale facility improvements like wayfinding.

Our commitment to patient partnership means that those most directly impacted are actively involved in shaping and reshaping how care is delivered. By working side by side with our community, we are building a health system that fosters trust, elevates experiences, and advances truly person-centered care for all.

Patient safety

The Patient Safety Program is a comprehensive initiative dedicated to the early prevention, mitigation, and reduction of potential harm to both patients and staff. This program is foundational to our commitment to delivering the highest quality of care in a safe and supportive environment. It is built upon six core pillars that ensure a proactive, transparent, and systematic approach to patient safety and continuous improvement.

Robust Incident Reporting System:

We have established an accessible and user-friendly incident reporting platform, known as MIDAS Safety Alerts, which is available to all employees. These reports are rigorously reviewed daily by the Patient Safety team in collaboration with operational leaders. Each Safety Alert is risk stratified to prioritize urgent cases. When indicated, rapid investigations are launched, followed by in-depth Root Cause Analyses (RCAs) to uncover systemic vulnerabilities and drive sustainable improvements across clinical and operational workflows.

Culture of Reporting Near Misses:

We actively promote a culture where staff feel empowered and encouraged to report “near misses” — events that could have resulted in harm but were averted. This proactive strategy is essential in identifying latent risks early, allowing us to implement preventive measures before incidents occur. This shift from reactive to proactive safety management fosters continuous learning and resilience within our care teams.

Engagement in Proactive Risk Analysis (FMEA):

Our participation in Joint Commission Failure Modes and Effects Analysis (FMEA) enables us to systematically identify, evaluate, and mitigate potential risks in patient care processes before adverse events happen. This forward-thinking approach ensures that new procedures, technologies, and care environments are rigorously assessed for safety, minimizing patient exposure to harm.

Annual Safety Culture Survey:

To ensure a psychologically safe environment, we conduct an annual culture survey measuring staff perceptions of safety and their willingness to speak up about safety concerns. This feedback loop is critical for nurturing open communication, addressing barriers to reporting, and fostering a workplace culture that prioritizes transparency and accountability — key factors in preventing patient harm.

Harm Measurement and Goal Setting:

We rigorously track overall harm rates involving both patients and staff, establishing clear, measurable annual targets for reduction. By analyzing trends and outcomes, we tailor interventions that address specific safety challenges, thereby continuously elevating the standard of care.

Monitoring Harm Acuity, Claims, and Defense Costs:

Our comprehensive data analysis includes monitoring harm severity (acuity), claims, and defense costs associated with patient safety incidents. This detailed tracking has demonstrated significant reductions in both patient harm and organizational liability, reflecting the effectiveness of our safety strategies.

Impact on Patient Care and Organizational Trust:

The Patient Safety Program has led to demonstrable improvements in patient and staff safety, evidenced by decreased incident rates, lower litigation costs, and enhanced risk mitigation. Beyond quantitative outcomes, the program reinforces a culture of empathy and accountability. Our Empathetic Communication program plays a vital role in rebuilding trust with patients and families following harm events, ensuring compassionate dialogue and support during difficult times.

Collectively, these efforts create a safer care environment, promote continuous learning, and enhance overall patient outcomes. The program not only safeguards against harm but also strengthens our organizational commitment to delivering patient-centered, high-quality healthcare.

Addressing patient social drivers of health

Alameda Health System has the following resources to assist with social drivers of health. AHS hosts several Community Health Worker (CHW) programs that are tailored to the unique needs and strengths of our patient population. AHS also offers the Homeless Health Center that provides care and navigation services to individuals experiencing homelessness. Lastly, we have begun implementing an online self-referral tool known as "FindHelp" that can connect patients with community resources without the need for a provider.

Our Community Health Worker workforce is integrated into teams and departments across the organization, and one of their primary functions is addressing social drivers of health. To increase continuity of care and delivery of social health resources, AHS has invested in this workforce through ongoing education and training, workflow alignment, EHR optimization and standard job descriptions. Approximately 65% have obtained their CHW certification. Programs with embedded CHWs range in intensity and design. For example, AHS has a low-barrier virtual help-desk model providing encounter-based support to anyone; several clinical care teams include CHWs in areas such as the HIV clinic, use disorder clinics, Mobile Health Clinic and the Highland Emergency Department; and lastly wrap around care management teams providing Enhanced Care Management support for highest risk patients

Performance in the priority area continued

Performance across all of the following priority areas.

Effective treatment

San Leandro: Sepsis care and sepsis mortality are two ways we monitor performance for Effective Treatment. San Leandro has been one of the top performers in our hospital system. The Core SEP-1 Early Management Bundle for Severe Sepsis/Septic Shock has performed at or higher than the national average (60%) since Q3 2023. In Q1 2024, the bundle compliance was 70% and outperformed the state average of 65%. Bundle compliance fell to 63% in Q3 and Q4 but was still above the national average. The sepsis mortality rate was better than the national benchmark in Q2 and Q3 2024, however it was worse in Q1 and Q4. Some opportunities for accurately coding sepsis patients were identified during the year, and targeted training was implemented. We believe more accurate coding will lead to improved mortality ratios. Some of the improvement in bundle compliance was driven by implementing a sepsis BPA for providers in the EMR and a sepsis narrator for nurses during the second half of 2024. We anticipate that standardizing technology improvements will reduce variations in care and help ensure consistent, high-quality outcomes for all patients.

Highland: Sepsis care and sepsis mortality are two ways we monitor performance for Effective Treatment. The Core SEP-1 Early Management Bundle for Severe Sepsis/Septic Shock improved from 38% bundle compliance in Q1 2024 to 62% bundle compliance in Q4 2024, which was above the national average. Our goal remains to meet or exceed the state average of 65% bundle compliance. The specific part of the bundle that drove improvement was the Septic Shock 6 Hour Bundle. The Septic Shock 6 Hour Bundle compliance rose from 40% compliance in Q1 2024 to 80% in Q4 2024. The Septic Shock 3 Hour Bundle has seen inconsistent performance and remains the biggest opportunity. In Q3 2024 the 3 Hour bundle compliance for septic shock fell to 33%, down from 50% in Q1 2024.

Alameda Hospital: Sepsis care and sepsis mortality are two ways we monitor performance for

Effective Treatment. Both measures showed significant improvement at Alameda during 2024. The Core SEP-1 Early Management Bundle for Severe Sepsis/Septic Shock improved from 50% bundle compliance in Q1 2024 to 70% bundle compliance in Q2 2024, which was above the national and state average. The bundle compliance at the end of year was 64% (above the national average). Similarly, sepsis mortality has improved substantially since the end of 2022. The observed to expected mortality rate for severe sepsis was 1.84 between April to June 2023 and much higher compared to the national benchmark of 1.04 (lower better). In Q1 2024 the mortality rate dropped to 1.02 and then was even lower during Q2 2024 at 0.84. In Q3 and Q4 the mortality ratio was 1.21 and higher than the benchmark. Some opportunities for accurately coding sepsis patients were identified during the year, and targeted training was implemented. We believe more accurate coding will lead to improved mortality ratios. Some of the improvement in bundle compliance was driven by implementing a sepsis BPA for providers in the EMR and a sepsis narrator for nurses during the second half of 2024. We anticipate that standardizing technology improvements will reduce variations in care and help ensure consistent, high-quality outcomes for all patients.

Care coordination

AHS has implemented Compass Rose, which is an Epic program focused on care coordination. Compass Rose uses features such as tasks, targets, and collaborative care plans to support care coordinators in a variety of settings. Compass Rose also enables enhanced reporting for monitoring of process and outcomes data. We have implemented Compass Rose in our outpatient care management programs Complex Care and Care Transitions; our help desk resource program Health Advocates; our CHWs in specialty and HIV clinics; and planning to implement in our substance use disorder clinic, Bridge, Palliative Care and Integrated Behavioral Health by early 2026.

Access to care

Our throughput initiatives are focused not only on operational efficiency but also on ensuring that every patient in our safety-net system receives timely, high-quality care. Reducing readmissions is one way we are addressing inequities that can stem from social drivers of health. We are strengthening discharge teaching, expanding close outpatient follow-up, and increasing case management support for patients with complex needs. Since most readmissions occur within seven days of discharge, we are piloting a telehealth model staffed with case management, nursing, and physicians to check in on patients after discharge. We have also implemented a readmission risk score in our electronic health record using predictive modeling to help anticipate which patients will be most at risk. These interventions help ensure that all patients – including those with limited resources, language barriers, or complex medical and social needs – have the tools and support needed to safely recover at home.

Improving inpatient bed capacity across our hospitals allows us to reduce delays for patients awaiting care. Patients in safety-net systems experience longer waits or transfers between facilities. By standardizing practices for intra-facility transfers and implementing the "Doc of the Day" model, we are improving system efficiency and ensuring that care is provided based on medical need and system capacity to deliver timely, appropriate care. Emergency Department boarding and ambulance patient offload delays can contribute to delays in access to care. By refining our surge plan and improving response workflows, we are reducing wait times and ensuring patients receive the right care in the right setting faster. This is a direct step toward closing gaps in access and ensuring our busiest entry points remain safe and responsive for all.

Discharge planning is another area of focus. Patients who face challenges such as housing instability, limited transportation, or lack of insurance are at greater risk of poor outcomes after hospitalization. By strengthening discharge planning, we are creating more reliable transitions to the

next step in care — whether that is a skilled nursing facility, home health, or timely follow-up with a primary or specialty provider.

Finally, improving access to primary care, specialty clinics, and operating rooms after emergency or inpatient care remains central to our mission. By prioritizing timely connections to follow-up and surgical care, we are helping to ensure that all patients receive the care they need without unnecessary delay.

Methodology Guidelines

Did the hospital follow the methodology in the Measures Submission Guide? (Y/N)
