

Hospital Equity Measures Report

General Information

Report Type:	Hospital Equity Measures Report
Year:	2024
Hospital Name:	GLENDALE MEMORIAL HOSPITAL AND HEALTH CENTER
Facility Type:	General Acute Care Hospital
Hospital HCAI ID:	106190522
Report Period:	1/1/2024 - 12/31/2024
Status:	Complete
Due Date:	09/30/2025
Last Updated:	01/16/2026
Hospital Location with Clean Water and Air:	N
Hospital Web Address for Equity Report:	https://shorturl.at/Qzs9D

Overview

Assembly Bill No. 1204 requires the Department of Health Care Access and Information (HCAI) to develop and administer a Hospital Equity Measures Reporting Program to collect and post summaries of key hospital performance and patient outcome data regarding sociodemographic information, including but not limited to age, sex, race/ethnicity, payor type, language, disability status, and sexual orientation and gender identity.

Hospitals (general acute, children's, and acute psychiatric) and hospital systems are required to annually submit their reports to HCAI. These reports contain summaries of each measure, the top 10 disparities, and the equity plans to address the identified disparities. HCAI is required to maintain a link on the HCAI website that provides access to the content of hospital equity measures reports and equity plans to the public. All submitted hospitals are required to post their reports on their websites, as well.

Laws and Regulations

For more information on Assembly Bill No. 1204, please visit the following link by copying and pasting the URL into your web browser:
https://leginfo.legislature.ca.gov/faces/billTextClient.xhtml?bill_id=202120220AB1204

Hospital Equity Measures

Joint Commission Accreditation

General acute care hospitals are required to report three structural measures based on the Commission Accreditation's Health Care Disparities Reduction and Patient-Centered Communication Accreditation Standards. For more information on these measures, please visit the following link by copying and pasting the URL into your web browser:

The first two structural measures are scored as "yes" or "no"; the third structural measure comprises the percentages of patients by five categories of preferred languages spoken, in addition to one other/unknown language category.

Designate an individual to lead hospital health equity activities (Y = Yes, N = No).

Y

Provide documentation of policy prohibiting discrimination (Y = Yes, N = No).

Y

Number of patients that were asked their preferred language, five defined categories and one other/unknown languages category.

45936

Table 1. Summary of preferred languages reported by patients.

Languages	Number of patients who report preferring language	Total number of patients	Percentage of total patients who report preferring language (%)
English Language	33729	45936	73.4
Spanish Language	6711	45936	14.6
Asian Pacific Islander Languages	263	45936	0.6
Middle Eastern Languages	4717	45936	10.3
American Sign Language	suppressed	45936	suppressed
Other Languages	suppressed	45936	suppressed

Centers for Medicare & Medicaid Services (CMS) Hospital Commitment to Health Equity Structural (HCHE) Measure

There are five domains that make up the CMS Hospital Commitment to HCHE measures. Each domain is scored as "yes" or "no." In order to score "yes," a general acute care hospital is required to confirm all the domain's attestations. Lack of one or more of the attestations results in a score of "no." For more information on the CMS Hospital Commitment to HCHE measures, please visit the following link by copying and pasting the URL into your web browser:

<https://data.cms.gov/provider-data/topics/hospitals/health-equity>

Centers for Medicare & Medicaid Services (CMS) Hospital Commitment to Health Equity Structural (HCHE) Measure Domain 1: Strategic Planning (Yes/No)

- Our hospital strategic plan identifies priority populations who currently experience health disparities.
- Our hospital strategic plan identifies healthcare equity goals and discrete action steps to achieve these goals.
- Our hospital strategic plan outlines specific resources that have been dedicated to achieving our equity goals.
- Our hospital strategic plan describes our approach for engaging key stakeholders, such as community-based organizations.

Y

CMS HCHE Measure Domain 2: Data Collection (Yes/No)

- Our hospital strategic plan identifies healthcare equity goals and discrete action steps to achieve these goals.
- Our hospital has training for staff in culturally sensitive collection of demographics and/or social determinant of health information.
- Our hospital inputs demographic and/or social determinant of health information collected from patients into structured, interoperable data elements using a certified electronic health record (EHR) technology.

Y

CMS HCHE Measure Domain 3: Data Analysis (Yes/No)

- Our hospital stratifies key performance indicators by demographic and/or social determinants of health variables to identify equity gaps and includes this information in hospital performance dashboards.

Y

CMS HCHE Measure Domain 4: Quality Improvement (Yes/No)

- Our hospital participates in local, regional or national quality improvement activities focused on reducing health disparities.

Y

CMS HCHE Measure Domain 5: Leadership Engagement (Yes/No)

- Our hospital senior leadership, including chief executives and the entire hospital board of trustees, annually reviews our strategic plan for achieving health equity.
- Our hospital senior leadership, including chief executives and the entire hospital board of trustees, annually review key performance indicators stratified by demographic and/or social factors.

Y

Centers for Medicare & Medicaid Services (CMS) Social Drivers of Health (SDOH)

General acute care hospitals are required to report on rates of screenings and intervention rates among patients above 18 years old for five health related social needs (HRSN), which are food insecurity, housing instability, transportation problems, utility difficulties, and interpersonal safety. These rates are reported separately as being screened as positive for any of the five HRSNs, positive for each individual HRSN, and the intervention rate for each positively screened HRSN. For more information on the CMS SDOH, please visit the following link by copying and pasting the URL into your web browser:

<https://www.cms.gov/priorities/innovation/key-concepts/social-drivers-health-and-health-related-social-needs>

Number of patients admitted to an inpatient hospital stay who are 18 years or older on the date of admission and are screened for all of the five HRSN

4965

Total number of patients who are admitted to a hospital inpatient stay and who are 18 years or older on the date of admission

6849

Rate of patients admitted for an inpatient hospital stay who are 18 years or older on the date of admission, were screened for an HRSN, and who screened positive for one or more of the HRSNs

22

Table 2. Positive screening rates and intervention rates for the five Health Related Social Needs of the Centers of Medicare & Medicaid Services (CMS) Social Drivers of Health (SDOH).

Social Driver of Health	Number of positive screenings	Rate of positive screenings (%)	Number of positive screenings who received intervention	Rate of positive screenings who received intervention (%)
Food Insecurity	350	7	0	0
Housing Instability	243	4.9	0	0
Transportation Problems	517	10.4	0	0
Utility Difficulties	200	4	0	0
Interpersonal Safety	123	2.5	0	0

Core Quality Measures for General Acute Care Hospitals

There are two quality measures from the Hospital Consumer Assessment of Healthcare Providers and Systems (HCAHPS) survey. For more information on the HCAHPS survey, please visit the following link by copying and pasting the URL into your web browser:

<https://hcahpsonline.org/en/survey-instruments/>

Patient Recommends Hospital

The first HCAHPS quality measure is the percentage of patients who would recommend the hospital to friends and family. For this measure, general acute care hospitals provide the percentage of patient respondents who responded "probably yes" or "definitely yes" to whether they would recommend the hospital, the percentage of the people who responded to the survey (i.e., the response rate), and the inputs for the percentages. The percentages and inputs are stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding HCAHPS question number is 19.

Number of respondents who replied "probably yes" or "definitely yes" to HCAHPS Question 19, "Would you recommend this hospital to your friends and family?"

650

Total number of respondents to HCAHPS Question 19

699

Percentage of total respondents who responded "probably yes" or "definitely yes" to HCAHPS Question 19

93

Total number of people surveyed on HCAHPS Question 19

5377

Response rate, or the percentage of people who responded to HCAHPS Question 19

13

Table 3. Patient recommends hospital by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

Race and/or Ethnicity	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
American Indian or Alaska Native					
Asian					
Black or African American					
Hispanic or Latino					
Middle Eastern or North African					
Multiracial and/or Multiethnic (two or more races)					
Native Hawaiian or Pacific Islander					
White					

Age	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Age < 18					
Age 18 to 34					
Age 35 to 49					
Age 50 to 64					
Age 65 Years and Older					

Sex assigned at birth	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Female					
Male					
Unknown					

Payer Type	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Medicare					
Medicaid					
Private					
Self-Pay					
Other					

Preferred Language	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
English Language					
Spanish Language					
Asian Pacific Islander Languages					
Middle Eastern Languages					
American Sign Language					
Other/Unknown Languages					

Disability Status	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Does not have a disability					
Has a mobility disability					
Has a cognition disability					
Has a hearing disability					
Has a vision disability					
Has a self-care disability					
Has an independent living disability					

Sexual Orientation	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Lesbian, gay or homosexual					
Straight or heterosexual					
Bisexual					
Something else					
Don't know					
Not disclosed					

Gender Identity	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Female					
Female-to-male (FTM)/ transgender male/trans man					
Male					
Male-to-female (MTF)/ transgender female/trans woman					
Non-conforming gender					
Additional gender category or other					
Not disclosed					

Patient Received Information in Writing

The second HCAHPS quality measure is the percentage of patients who reported receiving information in writing on symptoms and health problems to look out for after leaving the hospital. General acute care hospitals are required to provide the percentage of patient respondents who responded "yes" to being provided written information, the percentage of the people who responded to the survey (i.e., the response rate), and the inputs for these percentages. These percentages and inputs are stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding HCAHPS question number is 17.

Number of respondents who replied "yes" to HCAHPS Question 17, "During this hospital stay, did you get information in writing about what symptoms or health problems to look out for after you left the

hospital?"

587
Total number of respondents to HCAHPS Question 17
699

Percentage of respondents who responded "yes" to HCAHPS Question 17
84

Total number of people surveyed on HCAHPS Question 17
5377

Response rate, or the percentage of people who responded to HCAHPS Question 17
13

Table 4. Patient reports receiving information in writing about symptoms or health problems by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

Race and/or Ethnicity	Number of "yes" responses	Total number of responses	Percentage of "yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)

Agency for Healthcare Research and Quality (AHRQ) Indicators

General acute care hospitals are required to report on two indicators from the Agency for Healthcare Research and Quality (AHRQ). For general information about AHRQ indicators, please visit the following link by copying and pasting the URL into your web browser:

<https://qualityindicators.ahrq.gov/>

Pneumonia Mortality Rate

The Pneumonia Mortality Rate is defined as the rate of in-hospital deaths per 1,000 hospital discharges with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission for patients ages 18 years and older. General acute care hospitals report the Pneumonia Mortality Rate by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding AHRQ Inpatient Quality Indicator is 20. For more information about this indicator, please visit the following link by copying and pasting the URL into your web browser:

https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_20_Pneumonia_Mortality_Rate.pdf

Number of in-hospital deaths with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission

12

Total number of hospital discharges with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission

338

Rate of in-hospital deaths per 1,000 hospital discharges with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission

35.5

Death Rate among Surgical Inpatients with Serious Treatable Complications

The Death Rate among Surgical Inpatients with Serious Treatable Complications is defined as the rate of in-hospital deaths per 1,000 surgical discharges among patients ages 18-89 years old or obstetric patients with serious treatable complications. General acute care hospitals report this measure by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding AHRQ Patient Safety Indicator is 04. For more information about this indicator, please visit the following link by copying and pasting the URL into your web browser:
https://qualityindicators.ahrq.gov/Downloads/Modules/PSI/V2023/TechSpecs/PSI_04_Death_Rate_among_Surgical_Inpatients_with_Serious_Treatable_Complications.pdf

California Maternal Quality Care Collaborative (CMQCC) Core Quality Measures

There are three core quality maternal measures adopted from the California Maternal Quality Care Collaborative (CMQCC).

CMQCC Nulliparous, Term, Singleton, Vertex (NTSV) Cesarean Birth Rate

The CMQCC Nulliparous, Term, Singleton, Vertex (NTSV) Cesarean Birth Rate is defined as nulliparous women with a term (at least 37 weeks gestation), singleton baby in a vertex position delivered by cesarian birth. General acute care hospitals report the NTSV Cesarean Birth Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. For more information, please visit the following link by copying and pasting the URL into your web browser:

<https://www.cmqcc.org/quality-improvement-toolkits/supporting-vaginal-birth/ntsv-cesarean-birth-measure-specifications>

CMQCC Vaginal Birth After Cesarean (VBAC) Rate

The CMQCC Vaginal Birth After Cesarean (VBAC) Rate is defined as vaginal births per 1,000 deliveries by patients with previous Cesarean deliveries. General acute care hospitals report the VBAC Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The VBAC Rate uses the specifications of AHRQ Inpatient Quality Indicator 22. For more information, please visit the following link by copying and pasting the URL into your web browser:

[https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_22_Vaginal_Birth_After_Cesarean_\(VBAC\)_Delivery_Rate_Uncomplicated.pdf](https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_22_Vaginal_Birth_After_Cesarean_(VBAC)_Delivery_Rate_Uncomplicated.pdf)

CMQCC Exclusive Breast Milk Feeding Rate

The CMQCC Exclusive Breast Milk Feeding Rate is defined as the newborns per 100 who reached at least 37 weeks of gestation (or 3000g if gestational age is missing) who received breast milk

exclusively during their stay at the hospital. Other criteria are that the newborns did not go to the neonatal intensive care unit (NICU), transfer, or die, did not reflect multiple gestation, and did not have codes for parenteral nutrition or galactosemia. General acute care hospitals report the Exclusive Breast Milk Feeding Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The CMQCC Exclusive Breast Milk Feeding Rate uses the Joint Commission National Quality Measure PC-05. For more information, please visit the following link by copying and pasting the URL into your web browser: <https://manual.jointcommission.org/releases/TJC2024B/MIF0170.html>

Number of newborn cases that were exclusively fed breast milk during their hospital stay and meet the inclusion and exclusion criteria

NA

Total number of newborn cases born in the hospital that meet the inclusion and exclusion criteria

NA

Rate of newborn cases per 100 that were exclusively fed breast milk during their hospital stay and meet the inclusion and exclusion criteria

HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate

General acute care hospitals are required to report several HCAI All-Cause Unplanned 30-Day Hospital Readmission Rates, which are broadly defined as the percentage of hospital-level, unplanned, all-cause readmissions after admission for eligible conditions within 30 days of hospital discharge for patients aged 18 years and older. These rates are first stratified based on any eligible condition, mental health disorders, substance use disorders, co-occurring disorders, and no behavioral health diagnosis. Then, each condition-stratified hospital readmission rate is further stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. For more information on the HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate, please visit the following link by copying and pasting the URL into your web browser:

https://hcai.ca.gov/wp-content/uploads/2024/10/HCAI-All-Cause-Readmission-Rate-Exclusions_ADA.pdf

HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate – Any Eligible Condition

Number of inpatient hospital admissions which occurs within 30 days of the discharge date of an eligible index admission and were 18 years or older at time of admission

742

Total number of patients who were admitted to the general acute care hospital and were 18 years or older at time of admission

5471

Rate of hospital-level, unplanned, all-cause readmissions after admission for any eligible condition

within 30 days of hospital discharge for patients aged 18 and older

13.6

Health Equity Plan

All general acute care hospitals report a health equity plan that identifies the top 10 disparities and a written plan to address them.

Top 10 Disparities

Disparities for each hospital equity measure are identified by comparing the rate ratios by stratification groups. Rate ratios are calculated differently for measures with preferred low rates and those with preferred high rates. Rate ratios are calculated after applying the California Health and Human Services Agency's "Data De-Identification Guidelines (DDG)," dated September 23, 2016.

Table 15. Top 10 disparities and their rate ratio values.

Measures	Stratifications	Stratification Group	Stratification Rate	Reference Group	Reference Rate	Rate Ratio
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Age (excluding maternal measures)	50 to 64	15.9	18 to 34	6.2	2.6
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Age (excluding maternal measures)	65 and older	15.6	18 to 34	6.2	2.5
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Expected Payor	Medicare	16.5	Private	8.6	1.9
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Age (excluding maternal measures)	35 to 49	10.4	18 to 34	6.2	1.7
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate, stratified by behavioral health diagnosis (No Behavioral Health Diagnosis)	Sex Assigned at Birth	Male	14.8	Female	10.3	1.4
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Sex Assigned at Birth	Male	16.2	Female	11.6	1.4
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Expected Payor	Medicaid	12	Private	8.6	1.4
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Race and/or Ethnicity	Black or African American	17.6	Asian	12.9	1.4
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Preferred Language	Middle Eastern Languages	15.9	English Language	13	1.2
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Race and/or Ethnicity	White	14.2	Asian	12.9	1.1

Plan to address disparities identified in the data

Glendale Memorial aims to reduce unplanned 30-day readmissions across its top 10 identified disparity groups to advance health equity. A multi-faceted strategy combines data, culturally sensitive care, patient education, community partnerships, and system-level improvements.

Core Strategies:

1. Expand Health Equity Task Force Membership - Oversee the plan, monitor progress, and champion initiatives.
2. Deep Dive Data Analysis - Analyze root causes for each group, focusing on primary diagnoses, post-discharge barriers (medication, follow-ups, transportation, SDOH), and discharge planning variations.
3. Staff Education and Training - Health equity, implicit bias, cultural sensitivity, communication, and qualified medical interpreter use for all staff.

Top 10 Disparity Action Plans:

Groups #1 (Age 50-64) & #2 (Age 65+):

- Possible Root Causes: Chronic disease, socioeconomic factors, polypharmacy, cognitive/functional decline, social isolation, complex medical needs, navigating healthcare.
- Actions:
- Tailored patient education (medication, follow-up)
- Resource navigation for chronic conditions
- Connect to community health programs, support groups, and SDOH services.
- Age-specific discharge planning, comprehensive medication reconciliation, functional/cognitive assessment, caregiver education.
- Strengthen post-acute care communication.

- Use large print, simple language, teach-back, involve family/caregivers in education.
- Impact & Objective: Reduce 30-day readmission rate by 10% by FY26 Q4 to enhance quality of life.

Groups #3 (Medicare) & #7 (Medicaid):

- Possible Root Causes: Medicare: older adults, chronic conditions. Medicaid: significant SDOH challenges.
- Actions:
 - Universal SDOH screening (housing, food, transportation, utilities, social support).
 - Referrals to community resources for positive SDOH screens.
 - Strengthen partnerships with food banks, transportation, housing, free clinics.
- Impact & Objective: Reduce 30-day readmission rate by 10% for both groups by FY27 Q2 to address systemic barriers to care for economically vulnerable populations, improving health equity by supporting basic needs.

Group #4 (Age 35-49):

- Possible Root Causes: Work/family responsibilities, inconsistent primary care, undiagnosed/poorly managed chronic conditions, mental health comorbidities, substance use.
- Actions:
 - Mental health & SUD screening, warm hand-offs to outpatient treatment.
 - Financial counseling for insurance benefits and costs.
- Impact & Objective: Reduce 30-day readmission rate by 10% by FY26 Q4 in a usually productive age group, addressing underlying health issues before they become more severe.

Groups #5 (Male) & #6 (Male with Behavioral Health diagnosis):

- Possible Root Causes: Delays in seeking care (including preventive screenings), crisis presentation, stigma, especially with behavioral health.
- Actions:
 - Clear, accessible (multilingual) information on rights, behavioral health care, support services.
 - Prompt access to behavioral health specialists, proactive screening/referral.
 - Clear protocols for warm hand-offs to community providers.
- Impact & Objective: Reduce 30-day readmission rate by 10% by FY26 Q4 to facilitate early detection and management of behavioral health needs, improving physical health outcomes and preventing escalation of symptoms.

Group #8 (Race/Ethnicity - Black or African American):

- Possible Root Causes: SDOH, lack of culturally sensitive providers, high chronic disease prevalence.
- Actions:
 - Cultural sensitivity and implicit bias training (per core strategies).
 - SDOH screening.
- Impact & Objective: Reduce 30-day readmission rate by 10% by FY26 Q4, with an additional objective of improving patient experience scores related to cultural sensitivity by 10% by FY26 Q4. Provides culturally appropriate support, leading to improved health outcomes and reduced disparities.

Groups #9 (Preferred Language - Middle Eastern Languages) & #10 (White - Armenian):

- Possible Root Causes: Language barriers, difficulty obtaining Armenian-speaking qualified medical interpreters.
- Actions:
 - Ensure timely 24/7 qualified medical interpreters availability (in-person, video, phone); avoid family interpretation for medical info.
 - Translate key discharge documents (instructions, medications, appointments) into Armenian.
 - Educate staff on Armenian cultural norms (health, family involvement).

- Recruit Armenian-speaking staff/providers.
- Impact & Objective: Reduce 30-day readmission rate by 10% by FY26 Q4. Ensures safe and effective care by removing language barriers, fostering trust, and respecting cultural values.

Performance in the priority area

General acute care hospitals are required to provide hospital equity plans that address the top 10 disparities by identifying population impact and providing measurable objectives and specific timeframes. For each disparity, hospital equity plans will address performance across priority areas: person-centered care, patient safety, addressing patient social drivers of health, effective treatment, care coordination, and access to care.

Person-centered care

Performance Indicator: HCAHPS domains: Communication with Nurses/Doctors & Responsiveness of Staff

Impact: These metrics ensure that our communication and responsiveness is focused on our patient, meaningful communication that reflects the patient's preferred language, values, and cultural beliefs, and meeting their requested needs. We support patient-centered care in the following ways:

- Leadership Rounding provide us direct connection with patients and family input try to resolve any concerns, connect to appropriate staff, physicians, ancillary depts
- Use of interpreter services when patients identify their preferred language is other than English. We have robust resources for Qualified Medical Interpreters: Three interpreter services vendors for phone access, two vendors for video access, and one vendor for on-site interpreter access.
- Bedside hand-off for RN change of shift

Performance Indicator: Establish a Patient and Family Advisory Council that meets routinely with hospital leadership.

Impact: Our new Patient and Family Advisory Council provides invaluable input and perspective regarding projects and processes that impact patients. We will ensure the voices of a diverse group of community members who have been patients or family members of patients are included in shared decision-making.

Performance Indicator: Ensure a diverse group of community members informs the hospital's Community Health Needs Assessment.

Impact: Interviewing a widely diverse group of community leaders and community members ensures that our community is well represented when we develop our prioritized health needs and the programs and services that will meet those needs. The following populations were part of our 2025 Community Health Needs Assessment process via focus groups and stakeholder interviews:

- Schools: Pre-K through 12 and community college
- First Responders
- Disabled community
- LGBTQ+ community
- Seniors
- Housing Service Providers
- Youth and Family Service Providers

Patient safety

Performance Indicator: Data from key clinical measures are collected in multiple ways and are monitored regularly to determine and address any disparate gaps to ensure safe and equitable care. This data will be regularly presented and monitored in the multi-disciplinary Health Equity Taskforce.

Impact: We have an organization specific dashboard to monitor 7-day readmissions, sepsis mortality, heart failure mortality, and NTSV (low risk c-sections) that can be stratified by age, gender, race, ethnicity, and language. For example, for NTSV, we provide education in multiple ways to ensure all patients understand the associated risks of elective cesarean births. Throughout their prenatal care, all patients receive education on the risks of early elective deliveries, starting early and continuing throughout their care. Every patient seen at the prenatal clinic is provided with a form titled "Understanding the Risks of Elective (Non-Medically Indicated) Cesarean Birth with Your First Pregnancy," which is thoroughly reviewed and discussed with each patient. This education extends to the hospital setting, where it continues upon admission to Labor and Delivery. The form is available in patient preferred languages such as English, Spanish, and Armenian. Our team will continue to provide education in new and creative ways to ensure greater patient safety.

In addition, Glendale Memorial Hospital also ensures best practices to ensure patient safety. For example, as of March 2025, we introduced a dedicated laborist group, along with a 24/7 in-house anesthesiologist, exclusively for maternal patients. The availability of both specialists around the clock enhances patient safety, labor management, and timely interventions, contributing to a reduction in NTSV (nulliparous, term, singleton, vertex) cesarean deliveries. Key benefits include improved management of labor and effective pain management. One of the primary reasons for a cesarean section is poor pain management during labor, especially for first-time mothers. Having an anesthesiologist available ensures that patients have immediate access to pain relief options, such as epidurals or other anesthesia techniques, which can improve maternal satisfaction and reduce the likelihood of opting for a cesarean section due to fear of pain. With an obstetrician available around the clock, laboring women can receive immediate and expert care during the course of labor. This timely attention helps in monitoring progress, making adjustments, and intervening early if complications arise. Their constant presence means fewer delays in responding to evolving situations and decisions about necessary interventions can be made quickly and efficiently. In addition, Laborists can closely monitor high-risk patients (e.g., first-time mothers, women with preeclampsia, or gestational diabetes) and provide rapid interventions if necessary. This reduces the risks associated with delays in decision-making, which could lead to complications requiring cesarean deliveries.

Addressing patient social drivers of health

Performance Indicator: SDOH screening and response for all admitted patients.

Impact: For every adult inpatient admission, nursing must complete the Social Determinants of Health Screening in the electronic medical record for these elements: food insecurity, housing instability, transportation problems, utility difficulties, and interpersonal safety. If the patient screens positive for at least one of the elements, a consult is automatically sent to social work. Social work then performs an independent assessment and provides necessary resources to address the identified need(s). One example of how we provide support for patients with SDOH needs: A total of 3327 patients admitted to an inpatient hospital stay who are 18 years and older had a documentation of a completed screening between January-June 2025. Of the 3327, 3006 screened positive for at least one SDOH. Of the 5 elements, "transportation problems" rate is the highest at 9.5% (286/3006). As part of the safe discharge plan, our Care Coordination or Nursing Administration team assesses and addresses transportation needs. They collaborate with our resources and partners to arrange and ensure safe transport, primarily through the Roundtrip portal. For post-discharge appointment needs, appropriate transportation resources are provided.

Performance Indicator: At least 25% of Community Health Improvement Grants will be allocated to organizations who submit proposals to meet the SDOH needs of community members.

Impact: One of our top prioritized health needs in our most recent Community Health Needs Assessment is Housing for Low-Income Community Members and the Unhoused. To support local community agencies that seek to provide temporary, permanent-supportive, or low-income housing

in our community, GMHHC will ensure that at least 25% of our grant funds will be awarded to agencies that focus on this prioritized health need.

Performance in the priority area continued

Performance across all of the following priority areas.

Effective treatment

Performance Indicator: Adherence to clinical practice guidelines based upon available evidence for specific conditions.

Impact: GMHHC ensures clinical staff are educated and remain current with respect to evidenced based clinical guidelines for effective treatment. Education Department staff provide multiple avenues for education, including online, group, and at bedside. In addition, the electronic medical record is utilized as a means of providing clinical guidelines. For example, GMHHC has built in the electronic medical record the most recent AHA (American Heart Association) guidelines for treatment and management of heart failure patients. The utilization of current guidelines ensures equitable care and treatment for all of our patients.

Performance Indicator: SDOH screening for all admitted patients.

Impact: The successful collection of SDOH data is crucial for optimizing treatment. By understanding a patient's social context (e.g., housing insecurity or food scarcity), our clinical teams are better equipped to implement effective treatment plans, provide appropriate referrals, and ensure our patients have the resources they need to ensure care plans and medical treatments are successful and equitable. In addition, SDOH data is collected in the EMR to ensure clinician access, information sharing, and tailored treatment plans that can be monitored over time.

Care coordination

Performance Indicator: Care Coordination team members review all SDOH screening data and respond to identified needs accordingly.

Impact: Care Coordination team members utilize SDOH data to understand the social needs of our patients and identify patients who need a greater level of support. Team members create tailored plans of referrals and resources for patients. Patients with SDOH needs may benefit from a variety of supportive services beyond their hospitalization. Addressing SDOH strengthens the continuity of care that addresses both clinical and social needs, reduces readmission, and enhances the patient's healing and recovery. The following SDOH may be factored into care plans: transportation, housing, food security, utilities, and social support. Patients can be connected to community organizations and be provided with resources and referrals to address these needs. In addition, our hospital develops strong relationships with post-acute care providers to ensure a seamless transition for the patient upon discharge, as well as assisting patients with initial follow-up visits to providers.

Access to care

Performance Indicator: Utilization of a Qualified Medical Interpreter for all patients who identify a preferred language other than English.

Impact: Patients have a right to obtain medical information and education, and to express their medical history, symptoms, and questions, in their preferred language. The use of a Qualified Medical Interpreter ensures that our patients give and receive information that is understood by both patient and provider. This ensures that our patients' access to care at our hospital is accurate and meaningful.

Performance Indicator: At least 25% of Community Health Improvement Grants will be allocated to organizations who submit proposals to enhance access to care (medical, dental, and mental health) for our community members.

Impact: One of our top prioritized health needs in our most recent Community Health Needs Assessment is Access to Care. To support our community members and community agencies that seek to reduce barriers and provide supportive services—whether for medical, dental, or mental health needs—GMHHC will ensure that at least 25% of our grant funds will be awarded to agencies that focus on this prioritized health need.

Methodology Guidelines

Did the hospital follow the methodology in the Measures Submission Guide? (Y/N)
