

Hospital Equity Measures Report

General Information

Report Type:	Hospital Equity Measures Report
Year:	2024
Hospital Name:	MODOC MEDICAL CENTER
Facility Type:	General Acute Care Hospital
Hospital HCAI ID:	106254005
Report Period:	1/1/2024 - 12/31/2024
Status:	Complete
Due Date:	09/30/2025
Last Updated:	03/18/2026
Hospital Location with Clean Water and Air:	Y
Hospital Web Address for Equity Report:	https://modocmedicalcenter.org/

Overview

Assembly Bill No. 1204 requires the Department of Health Care Access and Information (HCAI) to develop and administer a Hospital Equity Measures Reporting Program to collect and post summaries of key hospital performance and patient outcome data regarding sociodemographic information, including but not limited to age, sex, race/ethnicity, payor type, language, disability status, and sexual orientation and gender identity.

Hospitals (general acute, children's, and acute psychiatric) and hospital systems are required to annually submit their reports to HCAI. These reports contain summaries of each measure, the top 10 disparities, and the equity plans to address the identified disparities. HCAI is required to maintain a link on the HCAI website that provides access to the content of hospital equity measures reports and equity plans to the public. All submitted hospitals are required to post their reports on their websites, as well.

Laws and Regulations

For more information on Assembly Bill No. 1204, please visit the following link by copying and pasting the URL into your web browser:

https://leginfo.legislature.ca.gov/faces/billTextClient.xhtml?bill_id=202120220AB1204

Hospital Equity Measures

Joint Commission Accreditation

General acute care hospitals are required to report three structural measures based on the Commission Accreditation's Health Care Disparities Reduction and Patient-Centered Communication Accreditation Standards. For more information on these measures, please visit the following link by copying and pasting the URL into your web browser:

<https://www.jointcommission.org/standards/r3-report/r3-report-issue-36-new-requirements-to-reduce>

-health-care-disparities/

The first two structural measures are scored as "yes" or "no"; the third structural measure comprises the percentages of patients by five categories of preferred languages spoken, in addition to one other/unknown language category.

Designate an individual to lead hospital health equity activities (Y = Yes, N = No).

Y

Provide documentation of policy prohibiting discrimination (Y = Yes, N = No).

Y

Number of patients that were asked their preferred language, five defined categories and one other/unknown languages category.

6258

Table 1. Summary of preferred languages reported by patients.

Languages	Number of patients who report preferring language	Total number of patients	Percentage of total patients who report preferring language (%)
English Language	6221	6258	99.4
Spanish Language	suppressed	6258	suppressed
Asian Pacific Islander Languages		6258	
Middle Eastern Languages		6258	
American Sign Language	suppressed	6258	suppressed
Other Languages	suppressed	6258	suppressed

Centers for Medicare & Medicaid Services (CMS) Hospital Commitment to Health Equity Structural (HCHE) Measure

There are five domains that make up the CMS Hospital Commitment to HCHE measures. Each domain is scored as "yes" or "no." In order to score "yes," a general acute care hospital is required to confirm all the domain's attestations. Lack of one or more of the attestations results in a score of "no." For more information on the CMS Hospital Commitment to HCHE measures, please visit the following link by copying and pasting the URL into your web browser:

<https://data.cms.gov/provider-data/topics/hospitals/health-equity>

Centers for Medicare & Medicaid Services (CMS) Hospital Commitment to Health Equity Structural (HCHE) Measure Domain 1: Strategic Planning (Yes/No)

- Our hospital strategic plan identifies priority populations who currently experience health disparities.
- Our hospital strategic plan identifies healthcare equity goals and discrete action steps to achieve these goals.
- Our hospital strategic plan outlines specific resources that have been dedicated to achieving our equity goals.
- Our hospital strategic plan describes our approach for engaging key stakeholders, such as community-based organizations.

N

CMS HCHE Measure Domain 2: Data Collection (Yes/No)

- Our hospital strategic plan identifies healthcare equity goals and discrete action steps to achieve these goals.

- Our hospital has training for staff in culturally sensitive collection of demographics and/or social determinant of health information.
- Our hospital inputs demographic and/or social determinant of health information collected from patients into structured, interoperable data elements using a certified electronic health record (EHR) technology.

Y

CMS HCHE Measure Domain 3: Data Analysis (Yes/No)

- Our hospital stratifies key performance indicators by demographic and/or social determinants of health variables to identify equity gaps and includes this information in hospital performance dashboards.

N

CMS HCHE Measure Domain 4: Quality Improvement (Yes/No)

- Our hospital participates in local, regional or national quality improvement activities focused on reducing health disparities.

Y

CMS HCHE Measure Domain 5: Leadership Engagement (Yes/No)

- Our hospital senior leadership, including chief executives and the entire hospital board of trustees, annually reviews our strategic plan for achieving health equity.
- Our hospital senior leadership, including chief executives and the entire hospital board of trustees, annually review key performance indicators stratified by demographic and/or social factors.

N

Centers for Medicare & Medicaid Services (CMS) Social Drivers of Health (SDOH)

General acute care hospitals are required to report on rates of screenings and intervention rates among patients above 18 years old for five health related social needs (HRSN), which are food insecurity, housing instability, transportation problems, utility difficulties, and interpersonal safety. These rates are reported separately as being screened as positive for any of the five HRSNs, positive for each individual HRSN, and the intervention rate for each positively screened HRSN. For more information on the CMS SDOH, please visit the following link by copying and pasting the URL into your web browser:

<https://www.cms.gov/priorities/innovation/key-concepts/social-drivers-health-and-health-related-social-needs>

Number of patients admitted to an inpatient hospital stay who are 18 years or older on the date of admission and are screened for all of the five HRSN

NA

Total number of patients who are admitted to a hospital inpatient stay and who are 18 years or older on the date of admission

NA

Rate of patients admitted for an inpatient hospital stay who are 18 years or older on the date of admission, were screened for an HRSN, and who screened positive for one or more of the HRSNs

NA

Table 2. Positive screening rates and intervention rates for the five Health Related Social Needs of the Centers of Medicare & Medicaid Services (CMS) Social Drivers of Health (SDOH).

Social Driver of Health	Number of positive screenings	Rate of positive screenings (%)	Number of positive screenings who received intervention	Rate of positive screenings who received intervention (%)
Food Insecurity				
Housing Instability				
Transportation Problems				
Utility Difficulties				
Interpersonal Safety				

Core Quality Measures for General Acute Care Hospitals

There are two quality measures from the Hospital Consumer Assessment of Healthcare Providers and Systems (HCAHPS) survey. For more information on the HCAHPS survey, please visit the following link by copying and pasting the URL into your web browser:

<https://hcahpsonline.org/en/survey-instruments/>

Patient Recommends Hospital

The first HCAHPS quality measure is the percentage of patients who would recommend the hospital to friends and family. For this measure, general acute care hospitals provide the percentage of patient respondents who responded "probably yes" or "definitely yes" to whether they would recommend the hospital, the percentage of the people who responded to the survey (i.e., the response rate), and the inputs for the percentages. The percentages and inputs are stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding HCAHPS question number is 19.

Number of respondents who replied "probably yes" or "definitely yes" to HCAHPS Question 19, "Would you recommend this hospital to your friends and family?"

35

Total number of respondents to HCAHPS Question 19

36

Percentage of total respondents who responded "probably yes" or "definitely yes" to HCAHPS Question 19

97.2

Total number of people surveyed on HCAHPS Question 19

129

Response rate, or the percentage of people who responded to HCAHPS Question 19

27.9

Table 3. Patient recommends hospital by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

Race and/or Ethnicity	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
American Indian or Alaska Native					
Asian					
Black or African American					
Hispanic or Latino					
Middle Eastern or North African					
Multiracial and/or Multiethnic (two or more races)					
Native Hawaiian or Pacific Islander					
White					

Age	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Age < 18					
Age 18 to 34					
Age 35 to 49					
Age 50 to 64					
Age 65 Years and Older					

Sex assigned at birth	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Female					
Male					
Unknown					

Payer Type	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Medicare					
Medicaid					
Private					
Self-Pay					
Other					

Preferred Language	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
English Language					
Spanish Language					
Asian Pacific Islander Languages					
Middle Eastern Languages					
American Sign Language					
Other/Unknown Languages					

Disability Status	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Does not have a disability					
Has a mobility disability					
Has a cognition disability					
Has a hearing disability					
Has a vision disability					
Has a self-care disability					
Has an independent living disability					

Sexual Orientation	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Lesbian, gay or homosexual					
Straight or heterosexual					
Bisexual					
Something else					
Don't know

Female-to-male (FTM)/ transgender male/trans man					
Male					
Male-to-female (MTF)/ transgender female/trans woman					
Non-conforming gender					
Additional gender category or other					
Not disclosed					

Patient Received Information in Writing

The second HCAHPS quality measure is the percentage of patients who reported receiving information in writing on symptoms and health problems to look out for after leaving the hospital. General acute care hospitals are required to provide the percentage of patient respondents who responded "yes" to being provided written information, the percentage of the people who responded to the survey (i.e., the response rate), and the inputs for these percentages. These percentages and inputs are stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding HCAHPS question number is 17.

Number of respondents who replied "yes" to HCAHPS Question 17, "During this hospital stay, did you get information in writing about what symptoms or health problems to look out for after you left the

hospital?"

33

Total number of respondents to HCAHPS Question 17

36

Percentage of respondents who responded "yes" to HCAHPS Question 17

91.7

Total number of people surveyed on HCAHPS Question 17

129

Response rate, or the percentage of people who responded to HCAHPS Question 17

27.9

Table 4. Patient reports receiving information in writing about symptoms or health problems by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

Race and/or Ethnicity	Number of "yes" responses	Total number of responses	Percentage of "yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
American Indian or Alaska Native					
Asian					
Black or African American					
Hispanic or Latino

Agency for Healthcare Research and Quality (AHRQ) Indicators

General acute care hospitals are required to report on two indicators from the Agency for Healthcare Research and Quality (AHRQ). For general information about AHRQ indicators, please visit the following link by copying and pasting the URL into your web browser:

<https://qualityindicators.ahrq.gov/>

Pneumonia Mortality Rate

The Pneumonia Mortality Rate is defined as the rate of in-hospital deaths per 1,000 hospital discharges with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission for patients ages 18 years and older. General acute care hospitals report the Pneumonia Mortality Rate by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding AHRQ Inpatient Quality Indicator is 20. For more information about this indicator, please visit the following link by copying and pasting the URL into your web browser:

https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_20_Pneumonia_Mortality_Rate.pdf

Death Rate among Surgical Inpatients with Serious Treatable Complications

The Death Rate among Surgical Inpatients with Serious Treatable Complications is defined as the rate of in-hospital deaths per 1,000 surgical discharges among patients ages 18-89 years old or obstetric patients with serious treatable complications. General acute care hospitals report this measure by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding AHRQ Patient Safety Indicator is 04. For more information about this indicator, please visit the following link by copying and pasting the URL into your web browser:
https://qualityindicators.ahrq.gov/Downloads/Modules/PSI/V2023/TechSpecs/PSI_04_Death_Rate_among_Surgical_Inpatients_with_Serious_Treatable_Complications.pdf

California Maternal Quality Care Collaborative (CMQCC) Core Quality Measures

There are three core quality maternal measures adopted from the California Maternal Quality Care Collaborative (CMQCC).

CMQCC Nulliparous, Term, Singleton, Vertex (NTSV) Cesarean Birth Rate

The CMQCC Nulliparous, Term, Singleton, Vertex (NTSV) Cesarean Birth Rate is defined as nulliparous women with a term (at least 37 weeks gestation), singleton baby in a vertex position delivered by cesarian birth. General acute care hospitals report the NTSV Cesarean Birth Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. For more information, please visit the following link by copying and pasting the URL into your web browser:

<https://www.cmqcc.org/quality-improvement-toolkits/supporting-vaginal-birth/ntsv-cesarean-birth-measure-specifications>

CMQCC Vaginal Birth After Cesarean (VBAC) Rate

The CMQCC Vaginal Birth After Cesarean (VBAC) Rate is defined as vaginal births per 1,000 deliveries by patients with previous Cesarean deliveries. General acute care hospitals report the VBAC Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The VBAC Rate uses the specifications of AHRQ Inpatient Quality Indicator 22. For more information, please visit the following link by copying and pasting the URL into your web browser:

[https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_22_Vaginal_Birth_After_Cesarean_\(VBAC\)_Delivery_Rate_Uncomplicated.pdf](https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_22_Vaginal_Birth_After_Cesarean_(VBAC)_Delivery_Rate_Uncomplicated.pdf)

Number of vaginal delivery among cases with previous Cesarean delivery that meet the inclusion and exclusion criteria

CMQCC Exclusive Breast Milk Feeding Rate

The CMQCC Exclusive Breast Milk Feeding Rate is defined as the newborns per 100 who reached at least 37 weeks of gestation (or 3000g if gestational age is missing) who received breast milk

exclusively during their stay at the hospital. Other criteria are that the newborns did not go to the neonatal intensive care unit (NICU), transfer, or die, did not reflect multiple gestation, and did not have codes for parenteral nutrition or galactosemia. General acute care hospitals report the Exclusive Breast Milk Feeding Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The CMQCC Exclusive Breast Milk Feeding Rate uses the Joint Commission National Quality Measure PC-05. For more information, please visit the following link by copying and pasting the URL into your web browser:
<https://manual.jointcommission.org/releases/TJC2024B/MIF0170.html>

Number of newborn cases that were exclusively fed breast milk during their hospital stay and meet the inclusion and exclusion criteria

NA

Total number of newborn cases born in the hospital that meet the inclusion and exclusion criteria

NA

Rate of newborn cases per 100 that were exclusively fed breast milk during their hospital stay and meet the inclusion and exclusion criteria

NA

HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate

General acute care hospitals are required to report several HCAI All-Cause Unplanned 30-Day Hospital Readmission Rates, which are broadly defined as the percentage of hospital-level, unplanned, all-cause readmissions after admission for eligible conditions within 30 days of hospital discharge for patients aged 18 years and older. These rates are first stratified based on any eligible condition, mental health disorders, substance use disorders, co-occurring disorders, and no behavioral health diagnosis. Then, each condition-stratified hospital readmission rate is further stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. For more information on the HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate, please visit the following link by copying and pasting the URL into your web browser:

https://hcai.ca.gov/wp-content/uploads/2024/10/HCAI-All-Cause-Readmission-Rate-Exclusions_ADA.pdf

HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate – Any Eligible Condition

Number of inpatient hospital admissions which occurs within 30 days of the discharge date of an eligible index admission and were 18 years or older at time of admission

14

Total number of patients who were admitted to the general acute care hospital and were 18 years or older at time of admission

138

Rate of hospital-level, unplanned, all-cause readmissions after admission for any eligible condition

within 30 days of hospital discharge for patients aged 18 and older

Health Equity Plan

All general acute care hospitals report a health equity plan that identifies the top 10 disparities and a written plan to address them.

Top 10 Disparities

Disparities for each hospital equity measure are identified by comparing the rate ratios by stratification groups. Rate ratios are calculated differently for measures with preferred low rates and those with preferred high rates. Rate ratios are calculated after applying the California Health and Human Services Agency's "Data De-Identification Guidelines (DDG)," dated September 23, 2016.

Table 15. Top 10 disparities and their rate ratio values.

Measures	Stratifications	Stratification Group	Stratification Rate	Reference Group	Reference Rate	Rate Ratio

Plan to address disparities identified in the data

After going through the report stratification process and applying the DDG suppression rules, no disparities were identified from following the procedures and process.

Performance in the priority area

General acute care hospitals are required to provide hospital equity plans that address the top 10 disparities by identifying population impact and providing measurable objectives and specific timeframes. For each disparity, hospital equity plans will address performance across priority areas: person-centered care, patient safety, addressing patient social drivers of health, effective treatment, care coordination, and access to care.

Person-centered care

At Modoc Medical Center person-centered care means empowering our patients to manage their own healthcare by being able to make informed decisions. Our goal is patient/clinician collaboration with emphasis on whole person care, meeting patients where they are and respecting their individuality. Approximately 12% of Modoc County residents speak a language other than English at home or their preferred language for communication is one other than English. We screen all patients for language spoken at home and language preference to ensure patients feel valued and respected. To accomplish this, we utilize qualified interpreters. We have a large population of Spanish speaking individuals. We utilize Propio translation services to ensure that individuals that are not primary English speaking understand all aspects of their care including consents, new medications, and discharge instructions. We do this to make certain that our ESL patients can make informed decisions about the care they receive from us.

Patient safety

We have recently engaged Hospital Quality Institute to prepare our equity data for the AB 1204 submission. After HQI created and stratified the data and applied the state's data suppression guidelines there were no disparities identified. Our understanding is this is due to our low inpatient volumes. However, at Modoc Medical Center patient safety is our goal. We strive to be proactive versus reactive to minimize risk and harm to patients during patient care delivery. We utilize an incident reporting system that community members, staff and patients can log issues related to adverse events, near misses and safety concerns. This includes falls, needle sticks, pressure ulcer issues, and medication errors. All issues that are logged are investigated and staff are educated, if warranted, on how to prevent a repeat of issue in the future.

Addressing patient social drivers of health

Modoc Medical Center screens for social drivers of health while admitted. We utilize the PRAPARE assessment. We have a large population of Spanish speaking individuals. We utilize Propio translation services to ensure that individuals that are not primary English speaking understand all aspects of their care including consents, new medications, and discharge instructions. We do this to make certain that our ESL patients can make informed decisions about the care they receive from us. Approximately 10% of Modoc County residents do not have medical insurance. We recognize

that we have patients that have health literacy and general literacy issues and because of this have not applied for MediCal and may not be seeking needed medical care due to their lack of understanding or discomfort. We assess all inpatients for literacy issues via our SDOH assessment and address literacy disparity by assisting patients with their initial MediCal packets. We will also collaborate and notify Social Services in the event of a literacy/understanding issue. We recognize that there are roughly 20% of Modoc County residents living in poverty as well as 31% of Modoc County residents are sixty-five or older. We have partnerships with our local agencies including Modoc County Social Services and Training, Employment and Community Help, Inc. (T.E.A.C.H., Inc.). With this partnership we can get patients enrolled in programs that promote better health while they are in our facility via referral and potentially reduce readmissions to the hospital by addressing root causes and promoting independence. We recently partnered with a mobile mammography unit and were able to have approximately forty individuals receive a mammogram that would have otherwise not been able due to various socioeconomic reasons including limited to no transportation or financial restraints preventing travel over one hundred miles.

Performance in the priority area continued

Performance across all of the following priority areas.

Effective treatment

We have recently engaged Hospital Quality Institute to prepare our equity data for the AB 1204 submission. After HQI created and stratified the data and applied the state's data suppression guidelines there were no disparities identified. Our understanding is this is due to our low inpatient volumes. However, our goal is to provide evidence-based treatment and base treatment on what matters most to patients. This thought process begins at admission to our facility and carries through to care planning and discharge. We are a small critical access facility and while we cannot produce substantial data, we can meet patients where they are with a more personalized approach as they are our friends and neighbors. We can provide individualized care with all providers active in the patient's care. For example, patients that are dealing with mental health and addiction issues and are in the process of opioid cessation therapy have access to not only their subscribing provider but the acute care team to ensure that treatment does not lapse and the patient's outcome is improved. This all continues while the patient is admitted.

Care coordination

Despite our data limitations, we make efforts to ensure that we are providing care to our patients that is equitable and respectful to diverse backgrounds and experiences. Modoc County has a notable population of approximately 20% of residents living in poverty. The way that we address potential and real disparities is often through referrals to our community partners. Our resources are limited in the area but because of these close relationships we can quickly recognize, refer, and address issues in real time. We recognize that approximately twenty percent of Modoc County residents live in poverty, and this can impact their ability to receive not only general care but healthcare. We utilize our SDOH survey and refer patients as potential disparity issues arise. We have partnerships with our local agencies including Modoc County Social Services and Training, Employment and Community Help, Inc. (T.E.A.C.H., Inc.). With this partnership we can get patients enrolled in programs that promote better health while they are in our facility via referral and potentially reduce readmissions to the hospital by addressing root causes and promoting independence. If an issue with support at home is triggered, we refer the patient to in home support services (IHSS) so they can get much needed help that potentially reduces future ER visits and admissions. IHSS workers assist with getting to appointments, purchasing food, prescription pick

up, cooking and cleaning. Additionally, the initial APS qualified time assessment can be done while the person is still admitted in preparation for discharge. If an issue with fuel and food scarcity is triggered on the assessment, we will also initiate a referral to TEACH's food bank, commodities, and home energy assistance program and assist with needed paperwork. If an issue is triggered regarding a patient being unhoused, we refer to MCSS and TEACH to secure temporary shelter after discharge.

Access to care

We are cognizant of our demographic and the needs within our community. By taking a team approach and partnering with other entities in our county and completing SDOH assessments, we believe we address disparities as best we can with limited resources to ensure we provide equitable care to our patients. Modoc County has a sizable number of PCP vacancies causing challenges with healthcare access. This lack of providers causes an increase in appointment wait times. To meet the needs of our community we have initiated a same day clinic which has helped improve access. We are also in an area without public transportation. To address this, we utilize MediCal transportation services to get patients to and from the facility for appointments. As previously discussed, Modoc County is a low-income area and Mental Health disparity in our county is an issue. We partner with our local mental health professionals to ensure that individuals experiencing mental health disorders have access to the medication management program at discharge. This program facilitates safe medication administration and reduces the likelihood that patients will present to the hospital in crisis and need admission. In addition to the BH medication management referral, BH staff will come to the facility and meet with patients when we find a need during our inpatient assessments. This also helps facilitate initial or continuing therapy while they are in house and ensure that a plan is made for those that may have transportation issues. We recently partnered with a mobile mammography unit and were able to have approximately forty individuals receive a mammogram that would have otherwise not been able due to various socioeconomic reasons including limited to no transportation or financial restraints preventing travel over one hundred miles.

Methodology Guidelines

Did the hospital follow the methodology in the Measures Submission Guide? (Y/N)
