

Hospital Equity Measures Report

General Information

Report Type:	Hospital Equity Measures Report
Year:	2024
Hospital Name:	GLENDORA HOSPITAL
Facility Type:	Acute Psychiatric Hospital
Hospital HCAI ID:	106190328
Report Period:	01/01/2024 - 12/31/2024
Status:	Complete
Due Date:	11/29/2025
Last Updated:	02/06/2026
Hospital Location with Clean Water and Air:	N
Hospital Web Address for Equity Report:	https://www.glendorahospital.com/

Overview

Assembly Bill No. 1204 requires the Department of Health Care Access and Information (HCAI) to develop and administer a Hospital Equity Measures Reporting Program to collect and post summaries of key hospital performance and patient outcome data regarding sociodemographic information, including but not limited to age, sex, race/ethnicity, payor type, language, disability status, and sexual orientation and gender identity.

Hospitals (general acute, children's, and acute psychiatric) and hospital systems are required to annually submit their reports to HCAI. These reports contain summaries of each measure, the top 10 disparities, and the equity plans to address the identified disparities. HCAI is required to maintain a link on the HCAI website that provides access to the content of hospital equity measures reports and equity plans to the public. All submitted hospitals are required to post their reports on their websites, as well.

Laws and Regulations

For more information on Assembly Bill No. 1204, please visit the following link by copying and pasting the URL into your web browser:

Hospital Equity Measures

Joint Commission Accreditation

Acute psychiatric hospitals are required to report three structural measures based on the Commission Accreditation's Health Care Disparities Reduction and Patient-Centered Communication Accreditation Standards. For more information on these measures, please visit the following link by copying and pasting the URL into your web browser:

<https://www.jointcommission.org/standards/r3-report/r3-report-issue-36-new-requirements-to-reduce>

-health-care-disparities/

The first two structural measures are scored as "yes" or "no"; the third structural measure comprises the percentages of patients by five categories of preferred languages spoken, in addition to one other/unknown language category.

Designate an individual to lead hospital health equity activities (Y = Yes, N = No).

Y

Provide documentation of policy prohibiting discrimination (Y = Yes, N = No).

Y

Number of patients that were asked their preferred language, five defined categories and one other/unknown languages category.

1628

Table 1. Summary of preferred languages reported by patients.

Languages	Number of patients who report preferring language	Total number of patients	Percentage of total patients who report preferring language (%)
English Language	1558	1628	95.7
Spanish Language	suppressed	1628	suppressed
Asian Pacific Islander Languages	suppressed	1628	suppressed
Middle Eastern Languages	suppressed	1628	suppressed
American Sign Language		1628	
Other Languages	suppressed	1628	suppressed

Centers for Medicare & Medicaid Services (CMS) Hospital Commitment to Health Equity Structural (HCHE) Measure

There are five domains that make up the CMS Hospital Commitment to HCHE measures. Each domain is scored as "yes" or "no." In order to score "yes," a acute psychiatric hospital is required to confirm all the domain's attestations. Lack of one or more of the attestations results in a score of "no." For more information on the CMS Hospital Commitment to HCHE measures, please visit the following link by copying and pasting the URL into your web browser:

<https://data.cms.gov/provider-data/topics/hospitals/health-equity>

Centers for Medicare & Medicaid Services (CMS) Hospital Commitment to Health Equity Structural (HCHE) Measure Domain 1: Strategic Planning (Yes/No)

- Our hospital strategic plan identifies priority populations who currently experience health disparities.
- Our hospital strategic plan identifies healthcare equity goals and discrete action steps to achieve these goals.
- Our hospital strategic plan outlines specific resources that have been dedicated to achieving our equity goals.
- Our hospital strategic plan describes our approach for engaging key stakeholders, such as community-based organizations.

Y

CMS HCHE Measure Domain 2: Data Collection (Yes/No)

- Our hospital strategic plan identifies healthcare equity goals and discrete action steps to achieve these goals.

- Our hospital has training for staff in culturally sensitive collection of demographics and/or social determinant of health information.
- Our hospital inputs demographic and/or social determinant of health information collected from patients into structured, interoperable data elements using a certified electronic health record (EHR) technology.

Y

CMS HCHE Measure Domain 3: Data Analysis (Yes/No)

- Our hospital stratifies key performance indicators by demographic and/or social determinants of health variables to identify equity gaps and includes this information in hospital performance dashboards.

Y

CMS HCHE Measure Domain 4: Quality Improvement (Yes/No)

- Our hospital participates in local, regional or national quality improvement activities focused on reducing health disparities.

Y

CMS HCHE Measure Domain 5: Leadership Engagement (Yes/No)

- Our hospital senior leadership, including chief executives and the entire hospital board of trustees, annually reviews our strategic plan for achieving health equity.
- Our hospital senior leadership, including chief executives and the entire hospital board of trustees, annually review key performance indicators stratified by demographic and/or social factors.

Y

Centers for Medicare & Medicaid Services (CMS) Social Drivers of Health (SDOH)

Acute psychiatric hospitals are required to report on rates of screenings and intervention rates among patients above 18 years old for five health related social needs (HRSN), which are food insecurity, housing instability, transportation problems, utility difficulties, and interpersonal safety. These rates are reported separately as being screened as positive for any of the five HRSNs, positive for each individual HRSN, and the intervention rate for each positively screened HRSN. For more information on the CMS SDOH, please visit the following link by copying and pasting the URL into your web browser: <https://www.cms.gov/priorities/innovation/key-concepts/social-drivers-health-and-health-related-social-needs>

Number of patients admitted to an inpatient hospital stay who are 18 years or older on the date of admission and are screened for all of the five HRSN

0

Total number of patients who are admitted to a hospital inpatient stay and who are 18 years or older on the date of admission

0

Rate of patients admitted for an inpatient hospital stay who are 18 years or older on the date of admission, were screened for an HRSN, and who screened positive for one or more of the HRSNs

0

Table 2. Positive screening rates and intervention rates for the five Health Related Social Needs of the Centers of Medicare & Medicaid Services (CMS) Social Drivers of Health (SDOH).

Social Driver of Health	Number of positive screenings	Rate of positive screenings (%)	Number of positive screenings who received intervention	Rate of positive screenings who received intervention (%)
Food Insecurity				
Housing Instability				
Transportation Problems				
Utility Difficulties				
Interpersonal Safety				

Core Quality Measures for General Acute Psychiatric Hospitals

There are two quality measures from the Hospital Consumer Assessment of Healthcare Providers and Systems (HCAHPS) survey. For more information on the HCAHPS survey, please visit the following link by copying and pasting the URL into your web browser:

<https://hcahpsonline.org/en/survey-instruments/>

Patient Recommends Hospital

The first HCAHPS quality measure is the percentage of patients who would recommend the hospital to friends and family. For this measure, acute psychiatric hospitals provide the percentage of patient respondents who responded "probably yes" or "definitely yes" to whether they would recommend the hospital, the percentage of the people who responded to the survey (i.e., the response rate), and the inputs for the percentages. The percentages and inputs are stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding HCAHPS question number is 19.

Number of respondents who replied "probably yes" or "definitely yes" to HCAHPS Question 19, "Would you recommend this hospital to your friends and family?"

31

Total number of respondents to HCAHPS Question 19

36

Percentage of total respondents who responded "probably yes" or "definitely yes" to HCAHPS Question 19

86.1

Total number of people surveyed on HCAHPS Question 19

212

Response rate, or the percentage of people who responded to HCAHPS Question 19

17.0

Table 3. Patient recommends hospital by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

Race and/or Ethnicity	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
American Indian or Alaska Native					
Asian					
Black or African American					
Hispanic or Latino					
Middle Eastern or North African					
Multiracial and/or Multiethnic (two or more races)					
Native Hawaiian or Pacific Islander					
White					

Age	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Age < 18					
Age 18 to 34					
Age 35 to 49					
Age 50 to 64					
Age 65 Years and Older					

Sex assigned at birth	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Female					
Male					
Unknown					

Payer Type	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Medicare					
Medicaid					
Private					
Self-Pay					
Other					

Preferred Language	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
English Language					
Spanish Language					
Asian Pacific Islander Languages					
Middle Eastern Languages					
American Sign Language					
Other/Unknown Languages					

Disability Status	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Does not have a disability					
Has a mobility disability					
Has a cognition disability					
Has a hearing disability					
Has a vision disability					
Has a self-care disability					
Has an independent living disability					

Sexual Orientation	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Lesbian, gay or homosexual					
Straight or heterosexual					
Bisexual					
Something else					
Don't know					
Not disclosed					

Gender Identity	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Female					
Female-to-male (FTM)/ transgender male/trans man					
Male					
Male-to-female (MTF)/ transgender female/trans woman					
Non-conforming gender					
Additional gender category or other					
Not disclosed					

Patient Received Information in Writing

The second HCAHPS quality measure is the percentage of patients who reported receiving information in writing on symptoms and health problems to look out for after leaving the hospital. Acute psychiatric hospitals are required to provide the percentage of patient respondents who responded "yes" to being provided written information, the percentage of the people who responded to the survey (i.e., the response rate), and the inputs for these percentages. These percentages and inputs are stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding HCAHPS question number is 17.

Number of respondents who replied "yes" to HCAHPS Question 17, "During this hospital stay, did you get information in writing about what symptoms or health problems to look out for after you left the

hospital?"

25

Total number of respondents to HCAHPS Question 17

36

Percentage of respondents who responded "yes" to HCAHPS Question 17

69.4

Total number of people surveyed on HCAHPS Question 17

212

Response rate, or the percentage of people who responded to HCAHPS Question 17

17.0

Table 4. Patient reports receiving information in writing about symptoms or health problems by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

Race and/or Ethnicity	Number of "yes" responses	Total number of responses	Percentage of "yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)

Male-to-female (MTF)/ transgender female/trans woman					
Non-conforming gender					
Additional gender category or other					
Not disclosed					

Agency for Healthcare Research and Quality (AHRQ) Indicators

Acute psychiatric hospitals are required to report on two indicators from the Agency for Healthcare Research and Quality (AHRQ). For general information about AHRQ indicators, please visit the following link by copying and pasting the URL into your web browser:
<https://qualityindicators.ahrq.gov/>

Pneumonia Mortality Rate

The Pneumonia Mortality Rate is defined as the rate of in-hospital deaths per 1,000 hospital discharges with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission for patients ages 18 years and older. Acute psychiatric hospitals report the Pneumonia Mortality Rate by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding AHRQ Inpatient Quality Indicator is 20. For more information about this indicator, please visit the following link by copying and pasting the URL into your web browser:
https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_20_Pneumonia_Mortality_Rate.pdf

Number of in-hospital deaths with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission

NA

Total number of hospital discharges with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission

NA

Rate of in-hospital deaths per 1,000 hospital discharges with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission

HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate

Acute psychiatric hospitals are required to report several HCAI All-Cause Unplanned 30-Day Hospital Readmission Rates, which are broadly defined as the percentage of hospital-level, unplanned, all-cause readmissions after admission for eligible conditions within 30 days of hospital discharge for patients aged 18 years and older. These rates are first stratified based on any eligible condition, mental health disorders, substance use disorders, co-occurring disorders, and no behavioral health diagnosis. Then, each condition-stratified hospital readmission rate is further stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. For more information on the HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate, please visit the following link by copying and pasting the URL into your web browser: https://hcai.ca.gov/wp-content/uploads/2024/10/HCAI-All-Cause-Readmission-Rate-Exclusions_ADA.pdf

HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate in an Inpatient Psychiatric Facility (IPF)

Number of inpatient admissions to an IPF which occurs within 30 days of the discharge date of an eligible index admission and were 18 years or older at time of admission
116

Total number of patients who were admitted to an IPF and were 18 years or older at time of admission
476

Rate of hospital-level, unplanned, all-cause readmissions after admission for any eligible condition within 30 days of hospital discharge for patients aged 18 and older
24.4

Table 6. HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate for any eligible condition by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

CMS Inpatient Psychiatric Facility Quality Reporting (IPFQR) Program Screening for Metabolic Disorders

Acute psychiatric hospitals are required to report the rate of structured screenings for metabolic disorders among patients with a prescription for one or more routinely scheduled antipsychotic medications. The structured screenings must contain (1) body mass index (BMI), (2) blood pressure, (3) blood glucose or HbA1c, and (4) a lipid panel, and be completed at least once in the 12 months prior to the patient's date of discharge. The rate of patient screenings for metabolic disorders are stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. For more information on the structured screenings for metabolic disorders, please see page 92 of the report by visiting the following link by copying and pasting the URL into your web browser:

Health Equity Plan

All acute psychiatric hospitals report a health equity plan that identifies the top 10 disparities and a written plan to address them.

Top 10 Disparities

Disparities for each hospital equity measure are identified by comparing the rate ratios by stratification groups. Rate ratios are calculated differently for measures with preferred low rates and those with preferred high rates. Rate ratios are calculated after applying the California Health and Human Services Agency's "Data De-Identification Guidelines (DDG)," dated September 23, 2016.

Table 14. Top 10 disparities and their rate ratio values.

Measures	Stratifications	Stratification Group	Stratification Rate	Reference Group	Reference Rate	Rate Ratio
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate in an Inpatient Psychiatric Facility (IPF).	Age (excluding maternal measures)	35 to 49	29.3	18 to 34	19.2	1.5
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate in an Inpatient Psychiatric Facility (IPF).	Race and/or Ethnicity	Middle Eastern or North African	27.2	Black or African American	20.7	1.3
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate in an Inpatient Psychiatric Facility (IPF).	Sex Assigned at Birth	Male	26.6	Female	20.7	1.3
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate in an Inpatient Psychiatric Facility (IPF).	Age (excluding maternal measures)	50 to 64	23.3	18 to 34	19.2	1.2
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate in an Inpatient Psychiatric Facility (IPF).	Age (excluding maternal measures)	50 to 64	23.3	18 to 34	19.2	1.2
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate in an Inpatient Psychiatric Facility (IPF).	Race and/or Ethnicity	American Indian or Alaska Native	24.4	Black or African American	20.7	1.2

Plan to address disparities identified in the data

Current readmission patterns appear to be driven primarily by patient acuity rather than equity-related factors. To ensure this continues to hold true, the organization will regularly stratify readmission data by demographic and clinical variables, apply risk-adjusted acuity scoring to distinguish clinical complexity from care-process issues, and rely on a multidisciplinary review committee to validate trends and guide targeted improvements.

To strengthen safe and effective care transitions, especially for patients with higher clinical needs, the organization is standardizing key practices. We track and report on the timeliness of medication consent and initiations of Riese petitions to help prevent treatment delays. As well, appropriate use of long-acting injectables through enhanced education and coordinated post-discharge follow-up allows for greater stabilization for patients. Discharge materials are standardized to support health literacy, offered in multiple languages, aligned across digital and printed formats.

Performance in the priority area

Acute psychiatric hospitals are required to provide hospital equity plans that address the top 10 disparities by identifying population impact and providing measurable objectives and specific timeframes. For each disparity, hospital equity plans will address performance across priority areas: person-centered care, patient safety, addressing patient social drivers of health, effective treatment, care coordination, and access to care.

Person-centered care

At Glendora Hospital, we are committed to person-centered care that respects each patient's needs, values, and preferences. This approach supports high-quality outcomes, positive experiences, and reduced readmissions. Our initiatives focus on safety, clear communication, cultural responsiveness, and equitable access.

We engage patients in treatment planning, goal setting, and shared decision-making to ensure care reflects what matters most to them. To support effective communication, we provide bilingual forms, employ bilingual staff, and offer certified audio and visual interpreter services. Each patient's preferred language is documented to promote accurate and respectful interactions. We contract with LanguageLine Solutions to provide interpretive services to our patients in their preferred and primary language.

We prioritize safe care transitions through clear discharge instructions, medication education, and structured follow-up to support recovery. Patient satisfaction surveys and direct feedback guide ongoing improvements, and leadership regularly reviews performance metrics to shape quality initiatives. While progress continues, we aim to further integrate patient input and expand access for underrepresented populations.

Through these efforts, we foster a supportive, inclusive environment that empowers patients and strengthens overall health outcomes.

Patient safety

At Glendora Hospital, patient safety is our top priority and the foundation of high-quality care. We work to minimize risk, strengthen communication, and improve outcomes through evidence-based practices and transparency. Our safety strategies include strict infection-prevention protocols, environmental audits, and low hospital-acquired infection rates. Staff receive ongoing training in fall prevention, medication safety, and CPI to support a proactive approach to harm reduction.

Clear communication is central to safety. Patient materials are offered in English and Spanish, preferred language is documented, and LanguageLine Solutions interpreter services are used to prevent errors during care planning, medication teaching, and discharge. Interpreting services ensure that all patients and surrogate decision-makers are able to understand their medical conditions and treatment options, that College Medical Center staff provides quality patient care to all patients regardless of language preferences, and to provide the designated surrogate health care decision maker for a patient, patient's family members, visitors and anyone with special communication needs with interpreters and/or other aid when necessary to ensure effective communication twenty-four (24) hours per day.

To support safe care transitions, we conduct medication reconciliation at admission and discharge, provide written instructions in the patient's preferred language, and offer tailored education to guide recovery. Vigilanz, our risk-reporting system, enables real-time corrective action and trend tracking. Safety data, patient feedback, and incident reports drive continuous improvement.

Addressing patient social drivers of health

Glendora Hospital actively addresses social determinants of health (SDOH) that affect patient outcomes, including housing instability, food insecurity, financial hardship, and transportation barriers. All patients are screened at admission and throughout their stay, allowing care teams to identify social risks in real time and incorporate this information into individualized care plans.

Patients with identified needs receive warm handoffs, coordinated support, and follow-up outreach. Social workers and community health workers connect patients to housing services, food assistance, transportation programs, employment resources, and other essential supports to help remove barriers that may hinder recovery.

High-need populations include individuals experiencing homelessness or unstable housing, patients from low-income communities, older adults with mobility challenges, and those with limited English proficiency—groups that often face overlapping social barriers.

By embedding SDOH screening into routine care and linking patients to tailored community resources, College Medical Center reduces disparities, strengthens well-being, and advances health equity across its diverse patient population.

Performance in the priority area continued

Performance across all of the following priority areas.

Effective treatment

Glendora Hospital delivers safe, evidence-based, and individualized treatment that promotes recovery and strengthens patient outcomes. Standardized clinical practices, interdisciplinary teamwork, and active patient engagement support effective, high-quality care. Care teams follow current clinical guidelines across medical, surgical, and behavioral health services, including key conditions such as sepsis, heart failure, respiratory illness, and acute psychiatric episodes.

Interdisciplinary collaboration is central to our approach. Physicians, nurses, social workers, pharmacists, rehabilitation therapists, and dietitians coordinate care daily, with weekly team reviews to address medical, behavioral, and social needs. Medication reconciliation, pharmacist oversight, and interdisciplinary meetings enhance medication safety and reduce errors.

Patients and families are engaged in care planning to ensure treatment goals reflect individual values and preferences. Interpreter services and translated materials support accurate communication and reduce risks related to language barriers. Standardized assessments, guideline-based pathways, and Cerner, our EHR, prompts promote equity by reducing variation in treatment, while vulnerable patients receive added support through care coordination and social services. Continuous monitoring of patient progress and performance metrics guides improvements and helps ensure safe, effective, and equitable care.

Care coordination

Glendora Hospital ensures care is seamless across providers, settings, and time, with a focus on equity. Multidisciplinary teams—including case managers, patient navigators, and community health workers—support patients through discharge, medication reconciliation, and follow-up, with culturally and linguistically tailored guidance. Telephonic and digital outreach addresses barriers such as transportation, language, or health literacy, ensuring no patient is lost in transition.

We monitor follow-up and readmission rates by demographic group to identify disparities. Patients with higher barriers, including limited English proficiency or social support needs, receive targeted navigator support, home care coordination, and connection to community resources. Communication between care teams ensures continuity and timely follow-up.

Through these efforts, Glendora Hospital delivers equitable, patient-centered care coordination,

reducing gaps and ensuring all patients receive safe, timely, and effective care.

Access to care

Glendora Hospital is committed to ensuring timely, equitable, and culturally responsive access to care for all patients. We recognize that access is influenced by language, transportation, insurance coverage, appointment availability, and coordination needs, and we work continuously to reduce barriers that may limit patients' ability to obtain services.

To support effective communication, patient materials are available in English and Spanish, interpreter services are offered across all care settings, and preferred language is documented at intake. Because Spanish is widely spoken in our community, we prioritize bilingual staff and culturally responsive communication.

Timely and coordinated care is supported through streamlined workflows that reduce delays during admission, discharge, and transitions of care. Scheduling processes are designed to minimize wait times and address disparities in access to primary and specialty services.

Financial assistance and charity care programs help mitigate cost-related barriers for uninsured and underinsured patients. Care coordination teams assist with insurance enrollment, referrals, and post-discharge planning to ensure continuity of care.

Methodology Guidelines

Did the hospital follow the methodology in the Measures Submission Guide? (Y/N)
