

Hospital Equity Measures Report

General Information

Report Type:	Hospital Equity Measures Report
Year:	2024
Hospital Name:	ST. JOHNS REGIONAL MEDICAL CENTER
Facility Type:	General Acute Care Hospital
Hospital HCAI ID:	106560529
Report Period:	1/1/2024 - 12/31/2024
Status:	Complete
Due Date:	09/30/2025
Last Updated:	03/09/2026
Hospital Location with Clean Water and Air:	Y
Hospital Web Address for Equity Report:	https://shorturl.at/Dyqlf

Overview

Assembly Bill No. 1204 requires the Department of Health Care Access and Information (HCAI) to develop and administer a Hospital Equity Measures Reporting Program to collect and post summaries of key hospital performance and patient outcome data regarding sociodemographic information, including but not limited to age, sex, race/ethnicity, payor type, language, disability status, and sexual orientation and gender identity.

Hospitals (general acute, children's, and acute psychiatric) and hospital systems are required to annually submit their reports to HCAI. These reports contain summaries of each measure, the top 10 disparities, and the equity plans to address the identified disparities. HCAI is required to maintain a link on the HCAI website that provides access to the content of hospital equity measures reports and equity plans to the public. All submitted hospitals are required to post their reports on their websites, as well.

Laws and Regulations

For more information on Assembly Bill No. 1204, please visit the following link by copying and pasting the URL into your web browser:

https://leginfo.legislature.ca.gov/faces/billTextClient.xhtml?bill_id=202120220AB1204

Hospital Equity Measures

Joint Commission Accreditation

General acute care hospitals are required to report three structural measures based on the Commission Accreditation's Health Care Disparities Reduction and Patient-Centered Communication Accreditation Standards. For more information on these measures, please visit the following link by copying and pasting the URL into your web browser:

<https://www.jointcommission.org/standards/r3-report/r3-report-issue-36-new-requirements-to-reduce>

-health-care-disparities/

The first two structural measures are scored as "yes" or "no"; the third structural measure comprises the percentages of patients by five categories of preferred languages spoken, in addition to one other/unknown language category.

Designate an individual to lead hospital health equity activities (Y = Yes, N = No).

Y

Provide documentation of policy prohibiting discrimination (Y = Yes, N = No).

Y

Number of patients that were asked their preferred language, five defined categories and one other/unknown languages category.

60905

Table 1. Summary of preferred languages reported by patients.

Languages	Number of patients who report preferring language	Total number of patients	Percentage of total patients who report preferring language (%)
English Language	44637	60905	73.3
Spanish Language	15755	60905	25.9
Asian Pacific Islander Languages	200	60905	0.3
Middle Eastern Languages	51	60905	0.1
American Sign Language	suppressed	60905	suppressed
Other Languages	suppressed	60905	suppressed

Centers for Medicare & Medicaid Services (CMS) Hospital Commitment to Health Equity Structural (HCHE) Measure

There are five domains that make up the CMS Hospital Commitment to HCHE measures. Each domain is scored as "yes" or "no." In order to score "yes," a general acute care hospital is required to confirm all the domain's attestations. Lack of one or more of the attestations results in a score of "no." For more information on the CMS Hospital Commitment to HCHE measures, please visit the following link by copying and pasting the URL into your web browser:

<https://data.cms.gov/provider-data/topics/hospitals/health-equity>

Centers for Medicare & Medicaid Services (CMS) Hospital Commitment to Health Equity Structural (HCHE) Measure Domain 1: Strategic Planning (Yes/No)

- Our hospital strategic plan identifies priority populations who currently experience health disparities.
- Our hospital strategic plan identifies healthcare equity goals and discrete action steps to achieve these goals.
- Our hospital strategic plan outlines specific resources that have been dedicated to achieving our equity goals.
- Our hospital strategic plan describes our approach for engaging key stakeholders, such as community-based organizations.

Y

CMS HCHE Measure Domain 2: Data Collection (Yes/No)

- Our hospital strategic plan identifies healthcare equity goals and discrete action steps to achieve these goals.

- Our hospital has training for staff in culturally sensitive collection of demographics and/or social determinant of health information.
- Our hospital inputs demographic and/or social determinant of health information collected from patients into structured, interoperable data elements using a certified electronic health record (EHR) technology.

Y

CMS HCHE Measure Domain 3: Data Analysis (Yes/No)

- Our hospital stratifies key performance indicators by demographic and/or social determinants of health variables to identify equity gaps and includes this information in hospital performance dashboards.

Y

CMS HCHE Measure Domain 4: Quality Improvement (Yes/No)

- Our hospital participates in local, regional or national quality improvement activities focused on reducing health disparities.

Y

CMS HCHE Measure Domain 5: Leadership Engagement (Yes/No)

- Our hospital senior leadership, including chief executives and the entire hospital board of trustees, annually reviews our strategic plan for achieving health equity.
- Our hospital senior leadership, including chief executives and the entire hospital board of trustees, annually review key performance indicators stratified by demographic and/or social factors.

Y

Centers for Medicare & Medicaid Services (CMS) Social Drivers of Health (SDOH)

General acute care hospitals are required to report on rates of screenings and intervention rates among patients above 18 years old for five health related social needs (HRSN), which are food insecurity, housing instability, transportation problems, utility difficulties, and interpersonal safety. These rates are reported separately as being screened as positive for any of the five HRSNs, positive for each individual HRSN, and the intervention rate for each positively screened HRSN. For more information on the CMS SDOH, please visit the following link by copying and pasting the URL into your web browser:

<https://www.cms.gov/priorities/innovation/key-concepts/social-drivers-health-and-health-related-social-needs>

Number of patients admitted to an inpatient hospital stay who are 18 years or older on the date of admission and are screened for all of the five HRSN

5529

Total number of patients who are admitted to a hospital inpatient stay and who are 18 years or older on the date of admission

7118

Rate of patients admitted for an inpatient hospital stay who are 18 years or older on the date of admission, were screened for an HRSN, and who screened positive for one or more of the HRSNs

77.7

Table 2. Positive screening rates and intervention rates for the five Health Related Social Needs of the Centers of Medicare & Medicaid Services (CMS) Social Drivers of Health (SDOH).

Social Driver of Health	Number of positive screenings	Rate of positive screenings (%)	Number of positive screenings who received intervention	Rate of positive screenings who received intervention (%)
Food Insecurity	488	8.8	0	
Housing Instability	213	3.9	0	
Transportation Problems	845	15.3	0	
Utility Difficulties	270	4.9	0	
Interpersonal Safety	119	2.2	0	

Core Quality Measures for General Acute Care Hospitals

There are two quality measures from the Hospital Consumer Assessment of Healthcare Providers and Systems (HCAHPS) survey. For more information on the HCAHPS survey, please visit the following link by copying and pasting the URL into your web browser:

<https://hcahpsonline.org/en/survey-instruments/>

Patient Recommends Hospital

The first HCAHPS quality measure is the percentage of patients who would recommend the hospital to friends and family. For this measure, general acute care hospitals provide the percentage of patient respondents who responded "probably yes" or "definitely yes" to whether they would recommend the hospital, the percentage of the people who responded to the survey (i.e., the response rate), and the inputs for the percentages. The percentages and inputs are stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding HCAHPS question number is 19.

Number of respondents who replied "probably yes" or "definitely yes" to HCAHPS Question 19, "Would you recommend this hospital to your friends and family?"

661

Total number of respondents to HCAHPS Question 19

718

Percentage of total respondents who responded "probably yes" or "definitely yes" to HCAHPS Question 19

92.1

Total number of people surveyed on HCAHPS Question 19

4787

Response rate, or the percentage of people who responded to HCAHPS Question 19

15

Table 3. Patient recommends hospital by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

Race and/or Ethnicity	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
American Indian or Alaska Native					
Asian					
Black or African American					
Hispanic or Latino					
Middle Eastern or North African					
Multiracial and/or Multiethnic (two or more races)					
Native Hawaiian or Pacific Islander					
White					

Age	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Age < 18					
Age 18 to 34					
Age 35 to 49					
Age 50 to 64					
Age 65 Years and Older					

Sex assigned at birth	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Female					
Male					
Unknown					

Payer Type	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Medicare					
Medicaid					
Private					
Self-Pay					
Other					

Preferred Language	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
English Language					
Spanish Language					
Asian Pacific Islander Languages					
Middle Eastern Languages					
American Sign Language					
Other/Unknown Languages					

Disability Status	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Does not have a disability					
Has a mobility disability					
Has a cognition disability					
Has a hearing disability					
Has a vision disability					
Has a self-care disability					
Has an independent living disability					

Sexual Orientation	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Lesbian, gay or homosexual					
Straight or heterosexual					
Bisexual					
Something else

Gender Identity	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Female					
Female-to-male (FTM)/ transgender male/trans man					
Male					
Male-to-female (MTF)/ transgender female/trans woman					
Non-conforming gender					
Additional gender category or other					
Not disclosed					

Patient Received Information in Writing

The second HCAHPS quality measure is the percentage of patients who reported receiving information in writing on symptoms and health problems to look out for after leaving the hospital. General acute care hospitals are required to provide the percentage of patient respondents who responded "yes" to being provided written information, the percentage of the people who responded to the survey (i.e., the response rate), and the inputs for these percentages. These percentages and inputs are stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding HCAHPS question number is 17.

Number of respondents who replied "yes" to HCAHPS Question 17, "During this hospital stay, did you get information in writing about what symptoms or health problems to look out for after you left the

hospital?"

617
Total number of respondents to HCAHPS Question 17
718

Percentage of respondents who responded "yes" to HCAHPS Question 17
85.9

Total number of people surveyed on HCAHPS Question 17
4787

Response rate, or the percentage of people who responded to HCAHPS Question 17
15

Table 4. Patient reports receiving information in writing about symptoms or health problems by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

Race and/or Ethnicity	Number of "yes" responses	Total number of responses	Percentage of "yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)

Agency for Healthcare Research and Quality (AHRQ) Indicators

General acute care hospitals are required to report on two indicators from the Agency for Healthcare Research and Quality (AHRQ). For general information about AHRQ indicators, please visit the following link by copying and pasting the URL into your web browser:

<https://qualityindicators.ahrq.gov/>

Pneumonia Mortality Rate

The Pneumonia Mortality Rate is defined as the rate of in-hospital deaths per 1,000 hospital discharges with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission for patients ages 18 years and older. General acute care hospitals report the Pneumonia Mortality Rate by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding AHRQ Inpatient Quality Indicator is 20. For more information about this indicator, please visit the following link by copying and pasting the URL into your web browser:

https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_20_Pneumonia_Mortality_Rate.pdf

Number of in-hospital deaths with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission

21

Total number of hospital discharges with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission

333

Rate of in-hospital deaths per 1,000 hospital discharges with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission

Death Rate among Surgical Inpatients with Serious Treatable Complications

The Death Rate among Surgical Inpatients with Serious Treatable Complications is defined as the rate of in-hospital deaths per 1,000 surgical discharges among patients ages 18-89 years old or obstetric patients with serious treatable complications. General acute care hospitals report this measure by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding AHRQ Patient Safety Indicator is 04. For more information about this indicator, please visit the following link by copying and pasting the URL into your web browser:
https://qualityindicators.ahrq.gov/Downloads/Modules/PSI/V2023/TechSpecs/PSI_04_Death_Rate_among_Surgical_Inpatients_with_Serious_Treatable_Complications.pdf

California Maternal Quality Care Collaborative (CMQCC) Core Quality Measures

There are three core quality maternal measures adopted from the California Maternal Quality Care Collaborative (CMQCC).

CMQCC Nulliparous, Term, Singleton, Vertex (NTSV) Cesarean Birth Rate

The CMQCC Nulliparous, Term, Singleton, Vertex (NTSV) Cesarean Birth Rate is defined as nulliparous women with a term (at least 37 weeks gestation), singleton baby in a vertex position delivered by cesarian birth. General acute care hospitals report the NTSV Cesarean Birth Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. For more information, please visit the following link by copying and pasting the URL into your web browser:

<https://www.cmqcc.org/quality-improvement-toolkits/supporting-vaginal-birth/ntsv-cesarean-birth-measure-specifications>

Number of NTSV patients with Cesarean deliveries

CMQCC Vaginal Birth After Cesarean (VBAC) Rate

The CMQCC Vaginal Birth After Cesarean (VBAC) Rate is defined as vaginal births per 1,000 deliveries by patients with previous Cesarean deliveries. General acute care hospitals report the VBAC Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The VBAC Rate uses the specifications of AHRQ Inpatient Quality Indicator 22. For more information, please visit the following link by copying and pasting the URL into your web browser:

[https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_22_Vaginal_Birth_After_Cesarean_\(VBAC\)_Delivery_Rate_Uncomplicated.pdf](https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_22_Vaginal_Birth_After_Cesarean_(VBAC)_Delivery_Rate_Uncomplicated.pdf)

Number of vaginal delivery among cases with previous Cesarean delivery that meet the inclusion and exclusion criteria

CMQCC Exclusive Breast Milk Feeding Rate

The CMQCC Exclusive Breast Milk Feeding Rate is defined as the newborns per 100 who reached at least 37 weeks of gestation (or 3000g if gestational age is missing) who received breast milk

exclusively during their stay at the hospital. Other criteria are that the newborns did not go to the neonatal intensive care unit (NICU), transfer, or die, did not reflect multiple gestation, and did not have codes for parenteral nutrition or galactosemia. General acute care hospitals report the Exclusive Breast Milk Feeding Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The CMQCC Exclusive Breast Milk Feeding Rate uses the Joint Commission National Quality Measure PC-05. For more information, please visit the following link by copying and pasting the URL into your web browser:
<https://manual.jointcommission.org/releases/TJC2024B/MIF0170.html>

Number of newborn cases that were exclusively fed breast milk during their hospital stay and meet the inclusion and exclusion criteria

HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate

General acute care hospitals are required to report several HCAI All-Cause Unplanned 30-Day Hospital Readmission Rates, which are broadly defined as the percentage of hospital-level, unplanned, all-cause readmissions after admission for eligible conditions within 30 days of hospital discharge for patients aged 18 years and older. These rates are first stratified based on any eligible condition, mental health disorders, substance use disorders, co-occurring disorders, and no behavioral health diagnosis. Then, each condition-stratified hospital readmission rate is further stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. For more information on the HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate, please visit the following link by copying and pasting the URL into your web browser:

https://hcai.ca.gov/wp-content/uploads/2024/10/HCAI-All-Cause-Readmission-Rate-Exclusions_ADA.pdf

HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate – Any Eligible Condition

Number of inpatient hospital admissions which occurs within 30 days of the discharge date of an eligible index admission and were 18 years or older at time of admission

833

Total number of patients who were admitted to the general acute care hospital and were 18 years or older at time of admission

6957

Rate of hospital-level, unplanned, all-cause readmissions after admission for any eligible condition

within 30 days of hospital discharge for patients aged 18 and older

12

Health Equity Plan

All general acute care hospitals report a health equity plan that identifies the top 10 disparities and a written plan to address them.

Top 10 Disparities

Disparities for each hospital equity measure are identified by comparing the rate ratios by stratification groups. Rate ratios are calculated differently for measures with preferred low rates and those with preferred high rates. Rate ratios are calculated after applying the California Health and Human Services Agency's "Data De-Identification Guidelines (DDG)," dated September 23, 2016.

Table 15. Top 10 disparities and their rate ratio values.

Measures	Stratifications	Stratification Group	Stratification Rate	Reference Group	Reference Rate	Rate Ratio
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Age (excluding maternal measures)	50 to 64	15.8	18 to 34	4	3.9
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Age (excluding maternal measures)	65 and older	13.2	18 to 34	4	3.3
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Age (excluding maternal measures)	35 to 49	9.3	18 to 34	4	2.3
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Expected Payor	Medicare	14	Private	7	2
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Expected Payor	Medicaid	10.9	Private	7	1.5

HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Sex Assigned at Birth	Male	13	Female	11.1	1.2
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Race and/or Ethnicity	Asian	13.3	White	11.6	1.1
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Preferred Language	Spanish Language	13.4	English Language	11.7	1.1

Plan to address disparities identified in the data

Months 1-3:

1. Patients identified as high risk for readmission will be prioritized for a nurse follow-up call within 3 days of patient discharge from the hospital.
2. Patients readmitted within 30 days will be reviewed by quality and patient safety coordinators to determine if there were opportunities for improvement in the first admission that might have prevented a readmission. Physician review will follow if there are opportunities attributed to physicians; if there are system opportunities, the conclusions of these reviews will be shared with appropriate leaders and committees for their action planning and implementation.
3. A spreadsheet of contributing factors for readmission will be presented to the Readmission PI Team for focused action planning. These include factors related to the social determinants of health as well as other factors identified by the review process.
4. All of this information including data, conclusions and recommended action strategies will be presented to the Readmission Reduction PI/UM Team monthly for input, feedback and final action plans.

Months 4-9:

1. Tailored Discharge Instructions addressing key metrics on early identification of readmission factors are shared with patients prior to discharge. Employ a patient or caregiver teach-back process for all necessary key instructions particularly symptom management.
2. Include patient key caregivers and engage them in an early state including all essential elements of the patient's experience from assessment to care planning, education and discharge instructions. A key focus of this engagement will be education about symptom management.
3. Timely transmission of key hospital information included in the discharge summary to primary

care providers and other post-acute care providers (home health, skilled nursing home etc.)

4. Symptom management pamphlet, refrigerator magnets and other documents will be developed for the most common diagnoses causing readmissions. These will be designed in a step by step process starting with minor symptoms and action steps to major symptoms and action steps.

Months 10-24:

1. Patient post-discharge phone calls will be made within 24 – 72 hours following patient discharge using a structured format designed to address patient understanding of discharge instructions, medication adherence, and symptom management as well as to confirm their follow-up appointment. This phone call will also be designed to capture any barriers to getting to their follow-up appointment.

2. Patients with identified barriers or those experiencing symptom management concerns will receive a second call within 7 days if needed to support any issues, opportunities or barriers to getting the help needed.

3. Conduct an analysis of opportunities for improvement over the previous 9 months to determine if there are patterns of care, treatment or services that needed improvement. Create and implement an action plan based on the conclusions from this analysis.

4. Create a consortium of post-acute care facilities. Invite key leaders from each facility to an initial meeting where common/shared goals are created and each facility has an opportunity to present their strengths and competencies. One of the shared goals will be the prevention of hospital readmissions.

5. On a quarterly basis the consortium would meet to review readmissions, discuss progress to goals, identify patient care needs, education needs or other factors designed to reduce readmissions.

Performance in the priority area

General acute care hospitals are required to provide hospital equity plans that address the top 10 disparities by identifying population impact and providing measurable objectives and specific timeframes. For each disparity, hospital equity plans will address performance across priority areas: person-centered care, patient safety, addressing patient social drivers of health, effective treatment, care coordination, and access to care.

Person-centered care

Person centered care is a holistic approach to health delivery that places the individual and their preferences and experiences at the center of decision-making. Rather than focusing solely on disease management, person centered care emphasizes dignity, respect and collaboration between patients, caregivers and providers to achieve the best health experience and outcomes.

The patient plan of care for all admitted patients is called a person-centered care plan. We have a comprehensive policy addressing the person-centered care plan and disciplines supporting the care, treatment and services for each patient contribute to this interdisciplinary person-centered care plan. Patients and their caregivers are encouraged to review and contribute to their plan of care. Specific goals and objectives as agreed upon by both the patient, caregivers and the care team are outlined and posted on the white board in their patient rooms so everyone is clear about these goals.

St. John's Regional Medical Center trains our employees to respectfully inquire about patients' cultural beliefs, preferences and practices related to health and illness. We work to ensure readily available access to qualified medical interpreters for all languages and commit to providing vital

information, particularly around the consent process and patient education, in the language preferred by the patient or caregiver. After explaining information, we use the teach-back method as a standard practice to ensure that patients understand their diagnosis and treatment plan.

Our care team works to elicit patient cultural preferences, values, concerns and lifestyle considerations when discussing care and treatment options. We work to integrate cultural beliefs and preferences in the care process as appropriate based on hospital policy and regulations to support patients in their care, treatment and services provided by our clinical teams.

Patient safety

St. John's Regional Medical Center has been on a high reliability journey for 3 years now. The high reliability model provides a framework for hospitals to operate safely and effectively in complex, high risk environments. This program focuses on eliminating process issues related to patient safety. Any issues, events or opportunities regarding patient safety are reported through our event reporting system and are addressed by leaders with oversight accountability for the issue, event or opportunity. All leaders are trained in the leader's accountabilities for high reliability and all staff at the time of orientation and routinely throughout the year are trained on the universal skills of a high reliability program.

Addressing patient social drivers of health

St. John's Regional Medical Center recognizes that our primary 10 disparities are directly attributable to 30 day all cause readmissions. Our hospital is committed to advancing health equity by reducing avoidable hospital readmissions through evidence based, patient centered care. Recognizing that social and structural barriers disproportionately affect vulnerable populations, our goal is to work to ensure all patients, regardless of race, income, payer, age, or sex receive equitable support during their hospital experience and certainly post acute care.

During New Employee Orientation, we emphasize that our mission compels us to have special care for "the vulnerable" with a commitment to "advancing social justice for all." This is further supported by our value of "inclusion" that demands equal treatment for all. This initial orientation is further supported by several online educational modules that ground us in these principles.

The care management team (care coordinators and social services) at St. John's Hospital Camarillo reviews patient information and the results of social determinants of health screening to determine if there are barriers or opportunities for patients. If and when identified, the care management team, in collaboration with physicians, the patient and the patient's caregivers work together to address as many of these social determinants as are possible. We work to educate patients on understanding health information so that they can manage any chronic conditions and navigate the healthcare system. This allows patients to advocate for their own needs and helps them design and achieve both short and long term goals. When appropriate, our team works to connect patients with programs designed to assist with financial support and work related agencies to get job training and improve employment opportunities and income.

The work also includes a warm hand-off to post-acute care facilities and community agencies that are able to support and/or address any of these opportunities or barriers.

St. John's Regional Medical Center also partners with other organizations including food banks, housing agencies, transportation services and other similar groups designed to address social determinants.

Performance in the priority area continued

Performance across all of the following priority areas.

Effective treatment

St. John's Regional Medical Center and its practitioners and staff work collaboratively to provide the most appropriate care, treatment and services based on patient input and assessment, diagnostic studies and the most up to date standards of care and standards of practice. We review multiple quality and patient safety metrics routinely to make sure patients are receiving the care, treatment and services needed in a timely manner. Such metrics include timely reporting and response for critical laboratory or radiology values, pain assessment and management and multiple other process and outcome measures all designed to identify barriers to effective care or opportunities for improvement in the patient's experience of that care, treatment and service.

Care coordination

The scope of care coordination and social services involves assessing and integrating medical, social, behavioral, educational, and financial needs to achieve optimal outcomes for an individual or family. Services include comprehensive assessments, care planning, advocacy, resource connection, monitoring, and collaboration with various providers and community supports, such as doctors, mental health professionals, schools, and housing agencies. Key goals are to reduce fragmented care, improve health equity, and ensure access to appropriate and comprehensive support for complex health and social challenges

When a patient's social needs are affecting or have the potential to affect their care plan, and the risk is moderate to low, the Care Coordination team provides tailored resources to address those needs (e.g., food banks, shelter).

If the patient's social needs are significantly interfering with their care plan and the risk is high, the Care Coordination and Social Work teams collaborate with the inpatient care team and post-acute care partners to provide clinical intervention and ensure continuity of care both during hospitalization and after discharge.

Access to care

At St. John's Regional Medical Center, we are profoundly committed to ensuring equitable access to care for every individual who walks through our doors. Regardless of age, sex, ethnic background, or payer status, every patient will receive the highest quality medical attention, delivered with compassion and respect. We believe that exceptional healthcare is a fundamental right, not a privilege, and our dedication to this principle guides every interaction and decision we make. Should any disparities or barriers to this equitable access arise, we are resolute in our commitment to address them quickly, appropriately, and effectively to maintain our high standards.

Methodology Guidelines

Did the hospital follow the methodology in the Measures Submission Guide? (Y/N)
