

Hospital Equity Measures Report

General Information

Report Type:	Hospital Equity Measures Report
Year:	2024
Hospital Name:	KERN MEDICAL CENTER
Facility Type:	General Acute Care Hospital
Hospital HCAI ID:	106150736
Report Period:	01/01/2024 - 12/31/2024
Status:	Complete
Due Date:	09/30/2025
Last Updated:	01/16/2026
Hospital Location with Clean Water and Air:	Y
Hospital Web Address for Equity Report:	https://www.kernmedical.com/

Overview

Assembly Bill No. 1204 requires the Department of Health Care Access and Information (HCAI) to develop and administer a Hospital Equity Measures Reporting Program to collect and post summaries of key hospital performance and patient outcome data regarding sociodemographic information, including but not limited to age, sex, race/ethnicity, payor type, language, disability status, and sexual orientation and gender identity.

Hospitals (general acute, children's, and acute psychiatric) and hospital systems are required to annually submit their reports to HCAI. These reports contain summaries of each measure, the top 10 disparities, and the equity plans to address the identified disparities. HCAI is required to maintain a link on the HCAI website that provides access to the content of hospital equity measures reports and equity plans to the public. All submitted hospitals are required to post their reports on their websites, as well.

Laws and Regulations

For more information on Assembly Bill No. 1204, please visit the following link by copying and pasting the URL into your web browser:

https://leginfo.legislature.ca.gov/faces/billTextClient.xhtml?bill_id=202120220AB1204

Hospital Equity Measures

Joint Commission Accreditation

General acute care hospitals are required to report three structural measures based on the Commission Accreditation's Health Care Disparities Reduction and Patient-Centered Communication Accreditation Standards. For more information on these measures, please visit the following link by copying and pasting the URL into your web browser:

<https://www.jointcommission.org/standards/r3-report/r3-report-issue-36-new-requirements-to-reduce>

-health-care-disparities/

The first two structural measures are scored as "yes" or "no"; the third structural measure comprises the percentages of patients by five categories of preferred languages spoken, in addition to one other/ unknown language category.

Designate an individual to lead hospital health equity activities (Y = Yes, N = No).

Y

Provide documentation of policy prohibiting discrimination (Y = Yes, N = No).

Y

Number of patients that were asked their preferred language, five defined categories and one other/ unknown languages category.

65176

Table 1. Summary of preferred languages reported by patients.

Languages	Number of patients who report preferring language	Total number of patients	Percentage of total patients who report preferring language (%)
English Language	48258	65176	74.0
Spanish Language	16383	65176	25.1
Asian Pacific Islander Languages	172	65176	0.3
Middle Eastern Languages	120	65176	0.2
American Sign Language	54	65176	0.1
Other Languages	189	65176	0.3

Centers for Medicare & Medicaid Services (CMS) Hospital Commitment to Health Equity Structural (HCHE) Measure

There are five domains that make up the CMS Hospital Commitment to HCHE measures. Each domain is scored as "yes" or "no." In order to score "yes," a general acute care hospital is required to confirm all the domain's attestations. Lack of one or more of the attestations results in a score of "no." For more information on the CMS Hospital Commitment to HCHE measures, please visit the following link by copying and pasting the URL into your web browser:

<https://data.cms.gov/provider-data/topics/hospitals/health-equity>

Centers for Medicare & Medicaid Services (CMS) Hospital Commitment to Health Equity Structural (HCHE) Measure Domain 1: Strategic Planning (Yes/No)

- Our hospital strategic plan identifies priority populations who currently experience health disparities.
- Our hospital strategic plan identifies healthcare equity goals and discrete action steps to achieve these goals.
- Our hospital strategic plan outlines specific resources that have been dedicated to achieving our equity goals.
- Our hospital strategic plan describes our approach for engaging key stakeholders, such as community-based organizations.

Y

CMS HCHE Measure Domain 2: Data Collection (Yes/No)

- Our hospital strategic plan identifies healthcare equity goals and discrete action steps to achieve these goals.

- Our hospital has training for staff in culturally sensitive collection of demographics and/or social determinant of health information.
- Our hospital inputs demographic and/or social determinant of health information collected from patients into structured, interoperable data elements using a certified electronic health record (EHR) technology.

Y

CMS HCHE Measure Domain 3: Data Analysis (Yes/No)

- Our hospital stratifies key performance indicators by demographic and/or social determinants of health variables to identify equity gaps and includes this information in hospital performance dashboards.

Y

CMS HCHE Measure Domain 4: Quality Improvement (Yes/No)

- Our hospital participates in local, regional or national quality improvement activities focused on reducing health disparities.

Y

CMS HCHE Measure Domain 5: Leadership Engagement (Yes/No)

- Our hospital senior leadership, including chief executives and the entire hospital board of trustees, annually reviews our strategic plan for achieving health equity.
- Our hospital senior leadership, including chief executives and the entire hospital board of trustees, annually review key performance indicators stratified by demographic and/or social factors.

Y

Centers for Medicare & Medicaid Services (CMS) Social Drivers of Health (SDOH)

General acute care hospitals are required to report on rates of screenings and intervention rates among patients above 18 years old for five health related social needs (HRSN), which are food insecurity, housing instability, transportation problems, utility difficulties, and interpersonal safety. These rates are reported separately as being screened as positive for any of the five HRSNs, positive for each individual HRSN, and the intervention rate for each positively screened HRSN. For more information on the CMS SDOH, please visit the following link by copying and pasting the URL into your web browser:

<https://www.cms.gov/priorities/innovation/key-concepts/social-drivers-health-and-health-related-social-needs>

Number of patients admitted to an inpatient hospital stay who are 18 years or older on the date of admission and are screened for all of the five HRSN

1733

Total number of patients who are admitted to a hospital inpatient stay and who are 18 years or older on the date of admission

7973

Rate of patients admitted for an inpatient hospital stay who are 18 years or older on the date of admission, were screened for an HRSN, and who screened positive for one or more of the HRSNs

21.7

Table 2. Positive screening rates and intervention rates for the five Health Related Social Needs of the Centers of Medicare & Medicaid Services (CMS) Social Drivers of Health (SDOH).

Social Driver of Health	Number of positive screenings	Rate of positive screenings (%)	Number of positive screenings who received intervention	Rate of positive screenings who received intervention (%)
Food Insecurity	156	9.0	33	1.9
Housing Instability	534	30.8	159	9.2
Transportation Problems	674	38.9	172	9.9
Utility Difficulties	720	41.5	188	10.8
Interpersonal Safety	186	10.7	57	3.3

Core Quality Measures for General Acute Care Hospitals

There are two quality measures from the Hospital Consumer Assessment of Healthcare Providers and Systems (HCAHPS) survey. For more information on the HCAHPS survey, please visit the following link by copying and pasting the URL into your web browser:

<https://hcahpsonline.org/en/survey-instruments/>

Patient Recommends Hospital

The first HCAHPS quality measure is the percentage of patients who would recommend the hospital to friends and family. For this measure, general acute care hospitals provide the percentage of patient respondents who responded "probably yes" or "definitely yes" to whether they would recommend the hospital, the percentage of the people who responded to the survey (i.e., the response rate), and the inputs for the percentages. The percentages and inputs are stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding HCAHPS question number is 19.

Number of respondents who replied "probably yes" or "definitely yes" to HCAHPS Question 19, "Would you recommend this hospital to your friends and family?"

284

Total number of respondents to HCAHPS Question 19

327

Percentage of total respondents who responded "probably yes" or "definitely yes" to HCAHPS Question 19

86.9

Total number of people surveyed on HCAHPS Question 19

4671

Response rate, or the percentage of people who responded to HCAHPS Question 19

7.0

Table 3. Patient recommends hospital by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

Race and/or Ethnicity	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
American Indian or Alaska Native					
Asian					
Black or African American					
Hispanic or Latino					
Middle Eastern or North African					
Multiracial and/or Multiethnic (two or more races)					
Native Hawaiian or Pacific Islander					
White					

Age	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Age < 18					
Age 18 to 34					
Age 35 to 49					
Age 50 to 64					
Age 65 Years and Older					

Sex assigned at birth	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Female					
Male					
Unknown					

Payer Type	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Medicare					
Medicaid					
Private					
Self-Pay					
Other					

Preferred Language	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
English Language					
Spanish Language					
Asian Pacific Islander Languages					
Middle Eastern Languages					
American Sign Language					
Other/Unknown Languages					

Disability Status	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Does not have a disability					
Has a mobility disability					
Has a cognition disability					
Has a hearing disability					
Has a vision disability					
Has a self-care disability					
Has an independent living disability					

Sexual Orientation	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Lesbian, gay or homosexual

Gender Identity	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Female					
Female-to-male (FTM)/ transgender male/trans man					
Male					
Male-to-female (MTF)/ transgender female/trans woman					
Non-conforming gender					
Additional gender category or other					
Not disclosed					

Patient Received Information in Writing

The second HCAHPS quality measure is the percentage of patients who reported receiving information in writing on symptoms and health problems to look out for after leaving the hospital. General acute care hospitals are required to provide the percentage of patient respondents who responded "yes" to being provided written information, the percentage of the people who responded to the survey (i.e., the response rate), and the inputs for these percentages. These percentages and inputs are stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding HCAHPS question number is 17.

Number of respondents who replied "yes" to HCAHPS Question 17, "During this hospital stay, did you get information in writing about what symptoms or health problems to look out for after you left the

hospital?"

278
Total number of respondents to HCAHPS Question 17
327

Percentage of respondents who responded "yes" to HCAHPS Question 17
85.0

Total number of people surveyed on HCAHPS Question 17
4671

Response rate, or the percentage of people who responded to HCAHPS Question 17
7.0

Table 4. Patient reports receiving information in writing about symptoms or health problems by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

Race and/or Ethnicity	Number of "yes" responses	Total number of responses	Percentage of "yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)

Agency for Healthcare Research and Quality (AHRQ) Indicators

General acute care hospitals are required to report on two indicators from the Agency for Healthcare Research and Quality (AHRQ). For general information about AHRQ indicators, please visit the following link by copying and pasting the URL into your web browser:

<https://qualityindicators.ahrq.gov/>

Pneumonia Mortality Rate

The Pneumonia Mortality Rate is defined as the rate of in-hospital deaths per 1,000 hospital discharges with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission for patients ages 18 years and older. General acute care hospitals report the Pneumonia Mortality Rate by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding AHRQ Inpatient Quality Indicator is 20. For more information about this indicator, please visit the following link by copying and pasting the URL into your web browser:

https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_20_Pneumonia_Mortality_Rate.pdf

Death Rate among Surgical Inpatients with Serious Treatable Complications

The Death Rate among Surgical Inpatients with Serious Treatable Complications is defined as the rate of in-hospital deaths per 1,000 surgical discharges among patients ages 18-89 years old or obstetric patients with serious treatable complications. General acute care hospitals report this measure by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding AHRQ Patient Safety Indicator is 04. For more information about this indicator, please visit the following link by copying and pasting the URL into your web browser:

California Maternal Quality Care Collaborative (CMQCC) Core Quality Measures

There are three core quality maternal measures adopted from the California Maternal Quality Care Collaborative (CMQCC).

CMQCC Nulliparous, Term, Singleton, Vertex (NTSV) Cesarean Birth Rate

The CMQCC Nulliparous, Term, Singleton, Vertex (NTSV) Cesarean Birth Rate is defined as nulliparous women with a term (at least 37 weeks gestation), singleton baby in a vertex position delivered by cesarian birth. General acute care hospitals report the NTSV Cesarean Birth Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. For more information, please visit the following link by copying and pasting the URL into your web browser:

<https://www.cmqcc.org/quality-improvement-toolkits/supporting-vaginal-birth/ntsv-cesarean-birth-measure-specifications>

Number of NTSV patients with Cesarean deliveries

CMQCC Vaginal Birth After Cesarean (VBAC) Rate

The CMQCC Vaginal Birth After Cesarean (VBAC) Rate is defined as vaginal births per 1,000 deliveries by patients with previous Cesarean deliveries. General acute care hospitals report the VBAC Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The VBAC Rate uses the specifications of AHRQ Inpatient Quality Indicator 22. For more information, please visit the following link by copying and pasting the URL into your web browser:

[https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_22_Vaginal_Birth_After_Cesarean_\(VBAC\)_Delivery_Rate_Uncomplicated.pdf](https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_22_Vaginal_Birth_After_Cesarean_(VBAC)_Delivery_Rate_Uncomplicated.pdf)

CMQCC Exclusive Breast Milk Feeding Rate

The CMQCC Exclusive Breast Milk Feeding Rate is defined as the newborns per 100 who reached at least 37 weeks of gestation (or 3000g if gestational age is missing) who received breast milk

exclusively during their stay at the hospital. Other criteria are that the newborns did not go to the neonatal intensive care unit (NICU), transfer, or die, did not reflect multiple gestation, and did not have codes for parenteral nutrition or galactosemia. General acute care hospitals report the Exclusive Breast Milk Feeding Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The CMQCC Exclusive Breast Milk Feeding Rate uses the Joint Commission National Quality Measure PC-05. For more information, please visit the following link by copying and pasting the URL into your web browser:
<https://manual.jointcommission.org/releases/TJC2024B/MIF0170.html>

Number of newborn cases that were exclusively fed breast milk during their hospital stay and meet the inclusion and exclusion criteria

HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate

General acute care hospitals are required to report several HCAI All-Cause Unplanned 30-Day Hospital Readmission Rates, which are broadly defined as the percentage of hospital-level, unplanned, all-cause readmissions after admission for eligible conditions within 30 days of hospital discharge for patients aged 18 years and older. These rates are first stratified based on any eligible condition, mental health disorders, substance use disorders, co-occurring disorders, and no behavioral health diagnosis. Then, each condition-stratified hospital readmission rate is further stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. For more information on the HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate, please visit the following link by copying and pasting the URL into your web browser:

https://hcai.ca.gov/wp-content/uploads/2024/10/HCAI-All-Cause-Readmission-Rate-Exclusions_ADA.pdf

HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate – Any Eligible Condition

Number of inpatient hospital admissions which occurs within 30 days of the discharge date of an eligible index admission and were 18 years or older at time of admission

602

Total number of patients who were admitted to the general acute care hospital and were 18 years or older at time of admission

5491

Rate of hospital-level, unplanned, all-cause readmissions after admission for any eligible condition

within 30 days of hospital discharge for patients aged 18 and older

11.0

Health Equity Plan

All general acute care hospitals report a health equity plan that identifies the top 10 disparities and a written plan to address them.

Top 10 Disparities

Disparities for each hospital equity measure are identified by comparing the rate ratios by stratification groups. Rate ratios are calculated differently for measures with preferred low rates and those with preferred high rates. Rate ratios are calculated after applying the California Health and Human Services Agency's "Data De-Identification Guidelines (DDG)," dated September 23, 2016.

Table 15. Top 10 disparities and their rate ratio values.

Measures	Stratifications	Stratification Group	Stratification Rate	Reference Group	Reference Rate	Rate Ratio
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Race and/or Ethnicity	Black or African American	18.1	Hispanic or Latino	9.2	3.9
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Age (excluding maternal measures)	50 to 64	17.0	18 to 34	5.9	2.9
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Expected Payor	Medicare	17.0	Private	6.0	2.8
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Race and/or Ethnicity	White	12.8	Hispanic or Latino	9.2	2.8
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Age (excluding maternal measures)	65 and older	14.0	18 to 34	5.9	2.4
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Age (excluding maternal measures)	35 to 49	12.3	18 to 34	5.9	2.1
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Expected Payor	Medicaid	10.4	Private	6.0	1.7
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Sex Assigned at Birth	Male	12.8	Female	9.8	1.3
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate, stratified by behavioral health diagnosis (No Behavioral Health Diagnosis)	Sex Assigned at Birth	Male	10.8	Female	8.7	1.2
CMQCC Exclusive Breast Milk Feeding	Race and/or Ethnicity	Hispanic or Latino	57.0	White	63.6	1.1

Plan to address disparities identified in the data

Kern Medical Center takes a proactive approach to addressing health equity and reducing disparities in care. We have staffed a data analytics team that analyzes quality performance to identify disparities within our care. Our goal is to ensure an equitable high-standard of care for all of our patients.

In regards to the All-Cause Unplanned 30-Day Hospital Readmission Rate measure, we established an Acute Care Transitions team staffed with licensed nurses. This team contacts all patients discharged to home within 48-96 hours to ensure they understand their discharge instructions, medication regimen, and have a platform to ask questions about their care. They also help ensure patients have a follow-up appointment with their primary care provider within two weeks or sooner if necessary.

To further reduce disparities and make this process more equitable, the team prioritizes patients with higher readmission risk scores, providing targeted support. Nurses are trained to communicate clearly and respectfully. The nurses help resolve any issues that arise, and will coordinate with Physicians, pharmacists, and clinic staff as needed. We also review data regularly to identify groups experiencing higher post-discharge challenges, allowing us to adjust our approach as needed and enhance equitable outcomes.

For the Exclusive Breast Milk Feeding measure, Kern Medical Center is certified as a Baby Friendly hospital, supporting evidence-based practices in infant feeding. To enhance equity and reduce disparities for Hispanic and Latino mothers, we've implemented a program that provides

breastfeeding education at every prenatal visit, using bilingual materials and brief conversations with providers. Free prenatal classes in English and Spanish are open to the public, and breastfeeding education posters are displayed in our clinics to reinforce key information. All patients receive education on breastfeeding and rooming-in both before and during their hospital stay. To minimize unnecessary formula use, infant formula is stored in our automated medication system, and any supplementation requests prompt a breastfeeding conversation. Donor milk is available for mothers facing temporary feeding challenges due to complications, supporting continued exclusive breastfeeding. Lactation consultant nurses are available to support all nursing patients, with a focus on ensuring that Hispanic and Latino families receive culturally and linguistically appropriate care.

Performance in the priority area

General acute care hospitals are required to provide hospital equity plans that address the top 10 disparities by identifying population impact and providing measurable objectives and specific timeframes. For each disparity, hospital equity plans will address performance across priority areas: person-centered care, patient safety, addressing patient social drivers of health, effective treatment, care coordination, and access to care.

Person-centered care

Improving patient experience is a strategic organization priority for our hospital and clinics. We actively collect feedback through patient experience surveys sent via mail, email, and text message. That data is aggregated into an online dashboard that is updated daily and available to leaders throughout the organization. Clinic leaders have developed targeted action plans to increase patient satisfaction. In the emergency room, we have focused on ensuring that patients are seen by a provider within 30 minutes. We learned that some patients, especially those from Mexico and Central America, did not understand the roles of Nurse Practitioners (NPs) and Physician Assistants (PAs) as providers. To address confusion among patients, we asked our providers to wear white coats to show that they are providers. In the inpatient setting, focus has been on leadership rounding to engage with patients throughout their stay, promptly identifying and resolving concerns as they arise. Similarly in the outpatient setting, we prioritize addressing and resolving patient complaints on the same day. Additionally, we've implemented customer service training for our outpatient staff, to foster respectful and compassionate interactions. We will continue to monitor our patient experience scores throughout the year and modify our action plans to ensure we meet the unique healthcare needs of each patient.

Patient safety

Kern Medical Center has a strong organization-wide focus on improving patient safety and providing equitable care across the organization. Our efforts focus on ensuring that stroke patients are discharged on antithrombotic therapy, ensuring surgical patients have venous thromboembolism prophylaxis, preventing bloodstream infections related to central venous catheter, reducing hospital-acquired *Clostridium difficile* (C. diff) infections, and reducing surgical site infections. We utilize the Plan-Do-Study-Act (PDSA) process to identify, address any areas of improvement and sustain our progress for all measures.

Kern Medical Center employs a dedicated stroke coordinator who ensures adherence to all stroke care protocols, including confirming that stroke patients are discharged on anti-thrombotic therapy. The stroke coordinator leads a regular stroke committee, comprising of hospital leaders and clinicians involved in stroke care, to discuss best practices, review findings, and implement and

evaluate action plans. We also participate in the American Heart Association's Get With the Guidelines Stroke program.

Kern Medical Center policy requires that Sequential Compression Device (SCD) machines are used perioperatively to decrease the risk of venous thromboembolism (VTE). The staff is provided education to comply with Kern Medical policies and protocols for ordering and administering VTE prophylaxis.

Data for patients who have undergone Central Venous Catheter (CVC) insertion is sent to clinical leaders on a monthly basis. One challenge previously encountered was incomplete documentation of maximal sterile barrier technique in certain areas of the hospital. Quality improvement staff provided re-education to providers on proper documentation of maximal sterile barrier technique in the electronic health record. Ongoing monitoring of these providers will continue to ensure sustained improvement in documentation practices, with additional interventions implemented if necessary.

Monthly meetings with clinical leaders are conducted to review and develop action plans aimed at reducing our hospital-acquired C. diff infection rate. A challenge we have seen with this measure is unnecessary ordering of C. diff tests. To combat this, we implemented a contraindication alert in the electronic health records (EHR) that automatically triggers based on criteria established by our infectious disease providers. Additionally, all positive C. diff results are reviewed by infectious disease providers and nurses to ensure appropriate preventative measures were taken.

Monthly meetings with clinical leaders are held to ensure continued progress in reducing surgical site infections (SSIs). In collaboration with infection control specialists, Kern Medical Center's surgery leaders has implemented evidence-based infection prevention bundles, including the CDC's 2017 SSI Prevention Guidelines to reduce all types of SSIs. To address infection rates in cesarean sections and colon surgeries, we implemented additional targeted strategies. For cesarean section deliveries, we adopted the Enhanced Recovery After Surgery Society (ERAS) intraoperative care guidelines, as published in the American Journal of Obstetrics and Gynecology in 2018. We identified a gap in preoperative skin preparation among patients referred from external, non-Kern Medical Center clinics. In response, our maternal/child clinical director worked partnered with external clinics to ensure they had the proper resources, including chlorohexidine gluconate (CHG) wipes and bilingual instructional brochures in English and Spanish. Similarly, we also implemented the ERAS guidelines for colon surgery to ensure proper best practices are being followed to reduce colon surgery infections.

Addressing patient social drivers of health

We have integrated Social Determinants of Health (SDOH) screening into both the inpatient and outpatient settings. Currently, we are upgrading our EHR to enable documentation of SDOH-related goals, problems, health concerns, and interventions. Moving forward, we will regularly stratify these aspects of SDOH to ensure equitable care delivery for all patients, regardless of race, ethnicity, or socioeconomic status.

Performance in the priority area continued

Performance across all of the following priority areas.

Effective treatment

We stratify our primary care measures by race, ethnicity, and preferred language. Through this

analysis, we identified that our Black population had a lower performance rate in the Controlling Blood Pressure measure. One contributing factor is a higher no-show rate within this population group. To address this, we collaborated with local school districts and community organizations to deploy mobile clinics in underserved, outlying communities. These mobile clinics provide primary care and immunizations to patients who face barriers accessing our main clinic locations. When these patients are seen at our main clinic locations, we specifically highlight them during daily chart preparation to ensure accurate blood pressure readings and appropriate care.

To further support patients, we conduct phone outreach to help educate patients on the importance of medication adherence and follow up visits. Our clinical and quality teams engage in pre-visit planning and chart preparation to ensure all necessary screenings and orders are in place. We leverage tools within our Cerner EMR, specifically the Health Registries and "Recommendations" functions, to support this work. Health Registries is a real-time population health registry tool integrated into the EHR that provides performance insights and supports pre-visit planning. These combined efforts have contributed to more consistent and improved blood pressure reading across our population health.

Care coordination

We established an Acute Care Transitions team composed of licensed nurses who call patients within 48-96 hours of hospital discharge. During these calls, they review discharge instructions, medications, and follow-up care, assist with scheduling primary care appointments within 2 weeks, and escalate concerns to providers or pharmacists as needed.

The team focuses on patients at higher risk of readmission, including Medi-Cal beneficiaries, racial and ethnic minorities, and patients with disabilities or complex chronic conditions, to ensure equitable support across populations. We also monitor outcomes by demographic groups to identify disparities and continuously improve our approach to transitional care.

Access to care

Our patient population spans a broad geographic region, presenting significant challenges in accessing care — particularly for families in rural communities. Many of our patients reside near agricultural zones where they work as farm laborers, often in regions with limited or no nearby healthcare facilities. This geographic isolation creates barriers to timely and consistent medical care.

To address this, we've invested in a fleet of mobile clinics that travel to these outlying communities, delivering essential primary care services directly to where our patients live and work. These mobile units help reduce transportation barriers, enhance continuity of care, and ensure that all of our patients receive the support they need, regardless of location.

Methodology Guidelines

Did the hospital follow the methodology in the Measures Submission Guide? (Y/N)
